Grading, Drainage Structures and Pavement under construction, Prop. 34' Crown 20' Duraco Pavement on caliche base.

DETOURS, TRAFFIC, ETC.

Due to the lack of available detours, the highway shall at all times be kept open to traffic. It shall be the entire responsibility of the Contractor to provide for the passage of traffic in comfort and safety at all times.

Class "D" barricades will be required at all times at each end of the section of the highway under construction as directed by the Engineer.

SPECIFICATIONS APPROVED BY THE CHIEF OF THE U. S. BUREAU OF PUBLIC ROADS, FEB. 26, 1926, AND SPECIFICATION ITEMS SUBSEQUENTLY APPROVED, LISTED AND DATED AS FOLLOWS, SHALL GOVERN IN THEIR REVERSE CHRONOLOGICAL ORDER:
ITEMS 1 TO 9 INCLUSIVE, APPROVED JULY 15, 1931.
ITEMS 10 TO 14 & 16 TO 18 INCLUSIVE, APPROVED NOV 1, 1935
REQUIRED SPECIAL PROVISIONS FOR REGULAR FEDERAL AID HIGHWAY PROJECTS APPROVED SEPT 4, 1935.

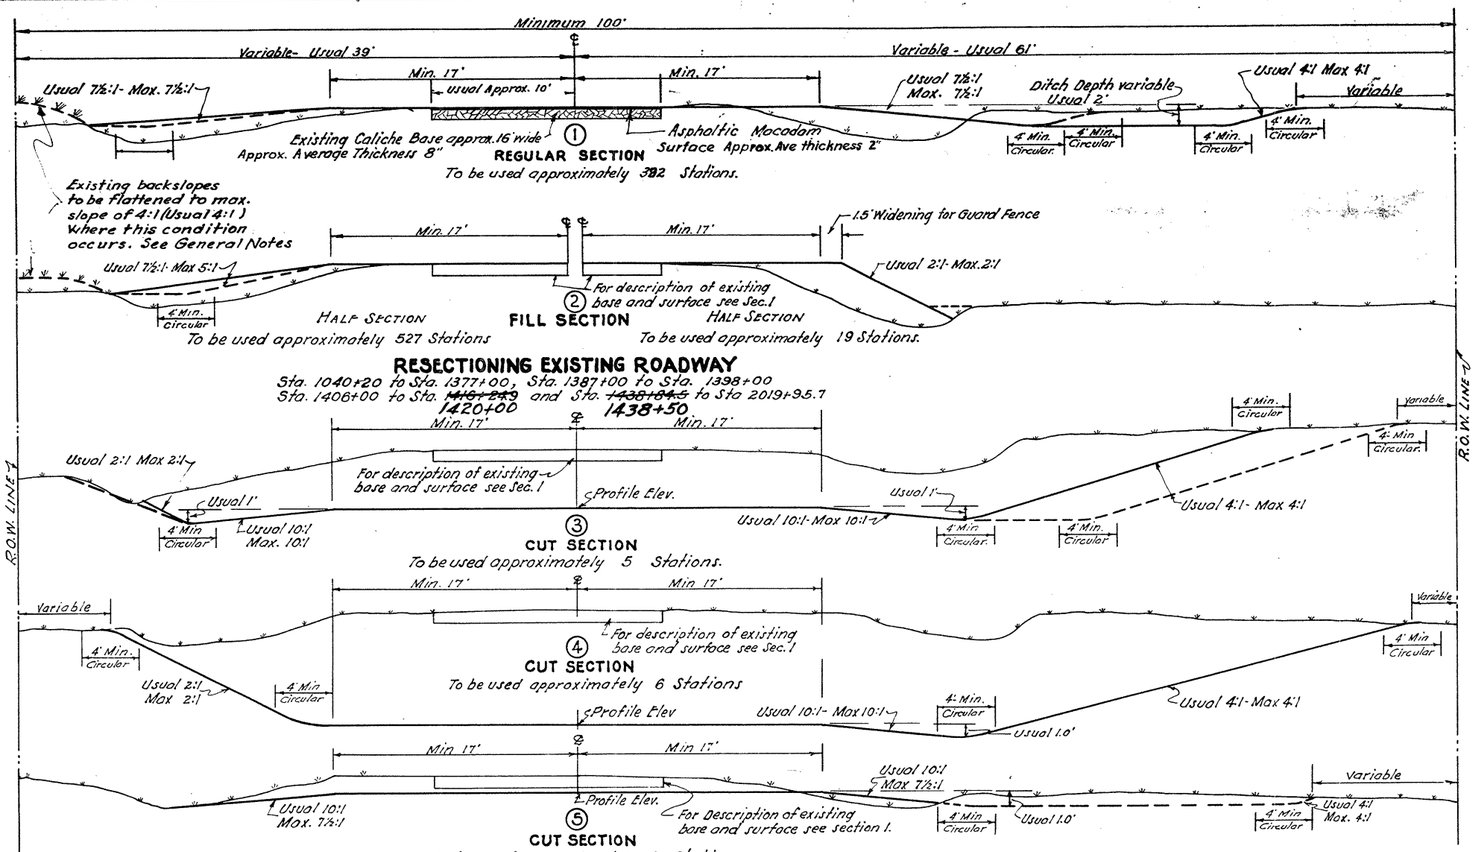
ENGINEER OF MAINTENANCE

APPROVED: [redacted]
CHIEF ENGINEER



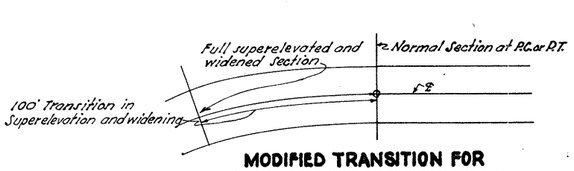
GENERAL NOTES

1. Where required by fixed features or unusual conditions, the governing slopes shown hereon may be varied when specifically directed by the Engineer.

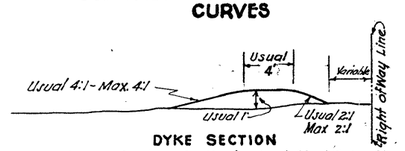
2. In the construction of Sections 3, 4, 5, 6, 7 & 8, the existing base and surfacing material is to be removed and stock piled as provided in Special Item "Salvaging and Replacing old Surface Material."

3. All curves on the relocated section are to be superelevated and widened in accordance with attached Standard "SWC-4," except that at the beginning and end of the relocation the transitions are to be modified as shown hereon.
On the section of the Highway where the existing roadway is to be resectioned, the curves which are all 1°30' or less, are not to be superelevated or widened.

4. Where directed by the Engineer the remaining existing backslopes along the left side of sections 1 & 2 as shown by broken ground lines are to be flattened by either excavating or constructing an embankment on the existing backslope as the case may require. A uniform circular section shall be constructed as directed by the Engineer.

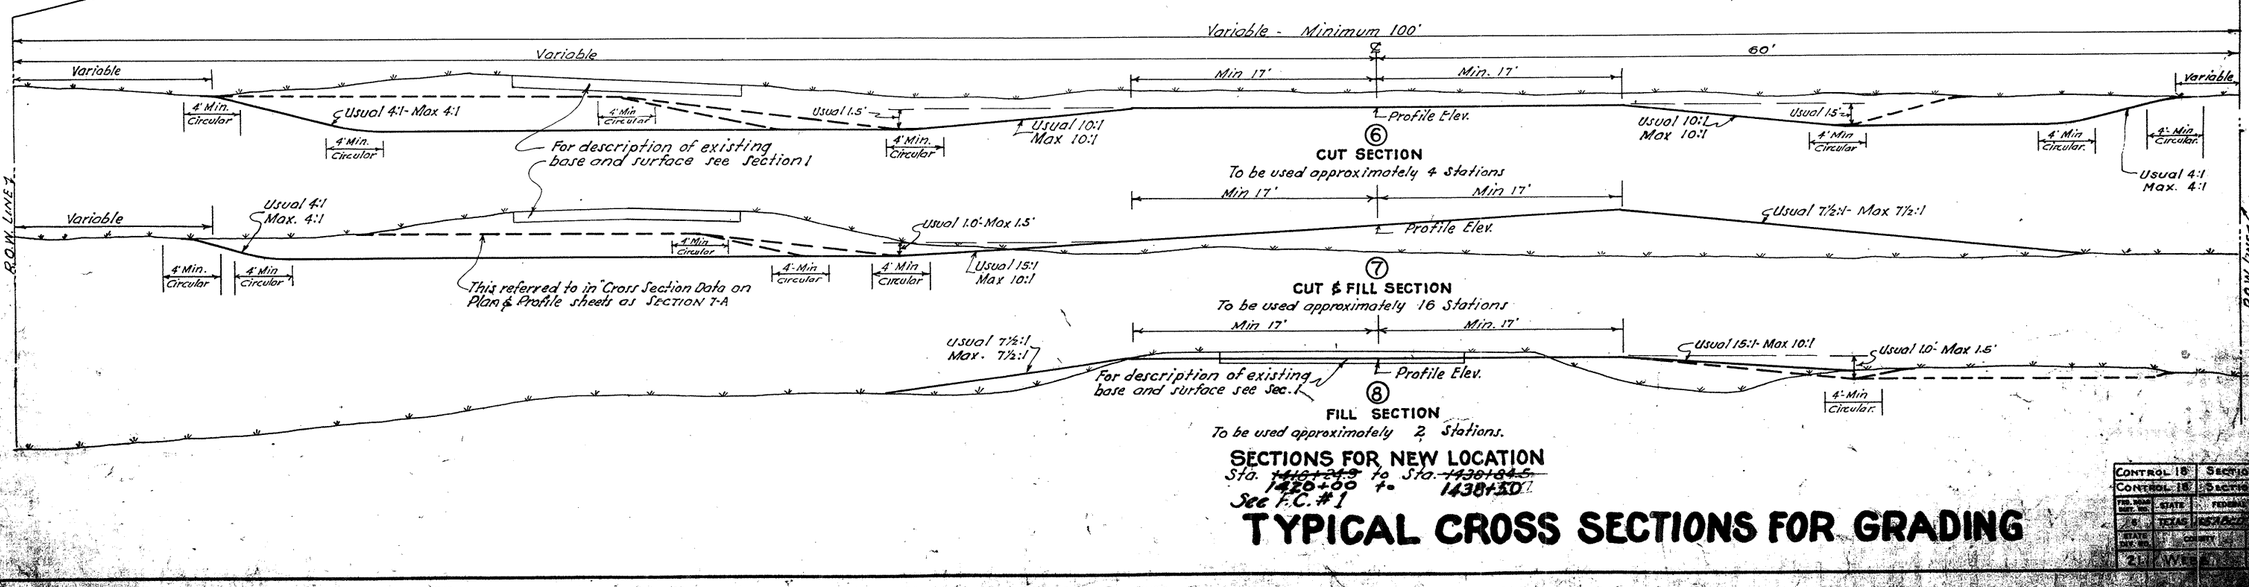


MODIFIED TRANSITION FOR SUPERELEVATING AND WIDENING CURVES



DYKE SECTION

To be used where indicated by letter "D" in the "Cross Section Data" on the plan profile sheets. or where directed by the Engineer. To be used approx. 161 stations.



SECTIONS FOR NEW LOCATION

Sta. ~~1407+24.9~~ 1420+00 to Sta. ~~1438+84.5~~ 1438+50

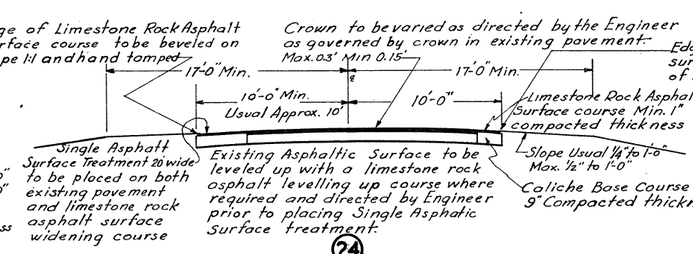
(WIDENING RIGHT SIDE ONLY)

Proposed between the following stations

Sta. 1040+20 to 1059+00
Sta. ~~1065+00 to 1105+00~~ 1064+00 to 1104+00
Sta. 1110 +00 to 1377 +00
Sta. 1387 +00 to 1398 +00
Sta. ~~1406+00 to 1416+24.9~~ 1406+00 to 1420+00
Sta. ~~1438+34.5 to 2019+05.7~~ 1438+50 to 2019+35.7

NOTE: The above sections indicate the construction proposed throughout the mayor portion of the project, where the alignment of the existing pavement is satisfactory, in which case the centerline is located approximately parallel to, and a minimum distance of 10'-0" from left edge of the existing pavement.



(24)

COMPLETED ROADBED

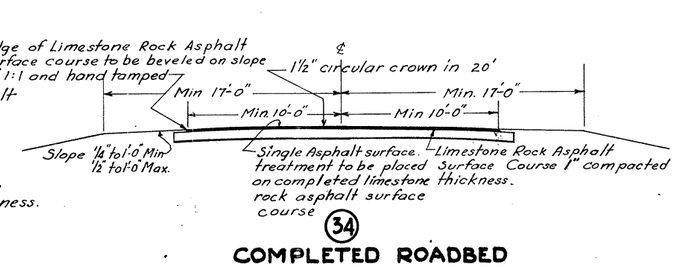
WIDENING EXISTING PAVEMENT

(WIDENING BOTH SIDES)

Proposed between the following Stations

Sta. 1059+00 to ~~1065+00~~ 1064+00
Sta. ~~1105+00~~ 1104+00 to 1110 +00

NOTE: The above sections indicate the construction proposed where base widening is required on both sides to correct short irregularities in alignment of existing pavement.



(34)

COMPLETED ROADBED

FULL WIDTH NEW PAVEMENT

(GRADE LINE REVISIONS & RELOCATION)

Proposed between the following Stations

Sta. 1377+00 to 1387+00
Sta. 1398+00 to 1406+00
Sta. ~~1416+24.9~~ to ~~1438+34.5~~
1420+00 to 1438+50

NOTES

WIDENING EXISTING PAVEMENT

All excavation involved in the preparation of subgrade including all existing base and surfacing material to be removed shall be measured and paid for as "Subgrade Excavation" in accordance with Special Provisions to Special Item "Fine Grading Subgrade."

The existing pavement is not super-elevated on curves (which are all 1°30' or less) and the completed widened pavement on curves is not to be super-elevated or widened.

FULL WIDTH NEW PAVEMENT

All excavation involved in the preparation of subgrade shall be measured and paid for as "Roadway Excavation" in accordance with Special Provisions to Special Item "Fine Grading Subgrade"

All curves are to be superelevated and widened in accordance with attached Standard SWC-1 except that at the beginning and end of the relocation a modified transition as indicated on Sheet 3 will be used.

GENERAL

Where required by fixed features the governing slopes and crowns indicated hereon may be varied when specifically directed by the Engineer

SINGLE ASPHALT SURFACE TREATMENT

1. Asphalt (AA-1 (135-C) ----- 0.30 gal. per Sq. Yd.
2. Aggregate (broken Stone) ----- 1 Cu. Yd. per 70 Sq. Yd.

NOTE:

These rates are the basis of estimate and may be varied by the Engineer in order to suit the varying conditions encountered during construction.

Markers M-1 shall be installed in all structures in this project in accordance with the standard detail therefor.

Payment for removing portions of existing headwalls, grouting, cleaning, etc. involved in the extension of existing vitrified clay pipe culvert shall be included in the unit price bid per cubic yard for Class A Concrete (For Extending Structures.)

The removal of portions of existing structures as provided for on the detail plans for the extension of existing structures shall include the removal of the existing railing on the structures and the salvaging of the existing rails. The rails shall be carefully removed and placed in neat piles along the right of way at convenient loading points which will not interfere with traffic or construction in such manner that the rails will be damaged for future use as little as possible.

⊕ The quantities of Common Road Excavation shown in the estimate summary includes the quantities involved in the preparation of subgrade for full width new pavement

\# "Clearing and Grubbing (Right-of-Way)" includes all areas within the right-of-way classified as "Clearing and Grubbing." "Clearing and Grubbing (Outside of Right-of-Way)" shall include all areas outside the right-of-way, (such as borrow sources, caliche sources, roads to borrow and caliche sources, and all such additional areas outside the right-of-way as shown on the plans or as designated by the Engineer) on which Clearing and Grubbing is involved.

\# For the items "BLADING EMBANKMENT"; "EXTRA ROLLING SUBGRADE AND BASE COURSES"; "TRUCK COMPACTION"; "SPRINKLING SUBGRADE AND BASE COURSES"; "TACK COAT"; AND "TACK COAT FOR LEVELING UP COURSE" NO. L.R.A. LEVELING-UP COURSE, standard Spec. Item 4.3 which allows only a 20% variation in quantities is hereby amended to allow a 40% variation. By this amendment no revised consideration as provided in Item 4.3, may be demanded for increased or decreased quantities of work under these items unless the quantities of same are increased or decreased by more than 40% of the quantities stated in the proposal.

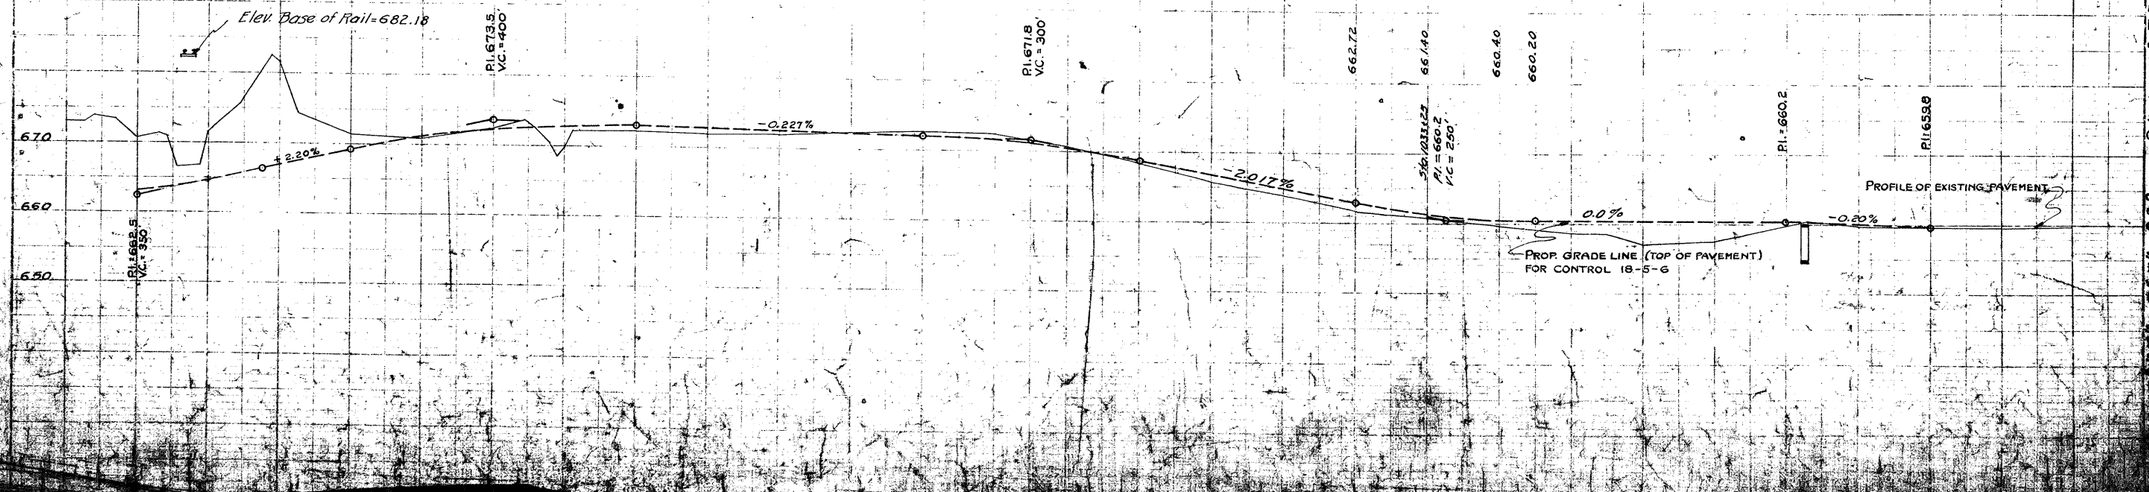
Embankment is to be constructed from excess roadway excavation on U.S. Works Program Grade Crossing Project No. WPGH 165-B, Control 18-5-6, by Contractor on that project.



PROJECT NOTES

ALL OBSTRUCTIONS WITHIN THE RIGHT OF WAY IS TO BE REMOVED BY THE COUNTY UNLESS OTHERWISE NOTED.

GRADED SIDE ROAD APPROACHES TO PUBLIC ROADS ARE TO BE CONSTRUCTED BY THE CONTRACTOR UNLESS OTHERWISE NOTED.

"CROSS SECTION DATA" IS DESIGNATION ONLY AND MAY BE VARIED BY ENGINEER WITHIN THE LIMITS INDICATED ON THE GOVERNING "TYPICAL CROSS SECTIONS". THE LETTER "D" APPEARING IN THE CROSS SECTION DATA INDICATES THAT A DYKE OR LEVEE IS TO BE CONSTRUCTED AS SHOWN ON THE TYPICAL CROSS SECTIONS.

FINAL PROJECT NOTE

From the [illegible] the embankment [illegible] constructed by the [illegible] on WPGH 165-B from [illegible] excavation from [illegible]

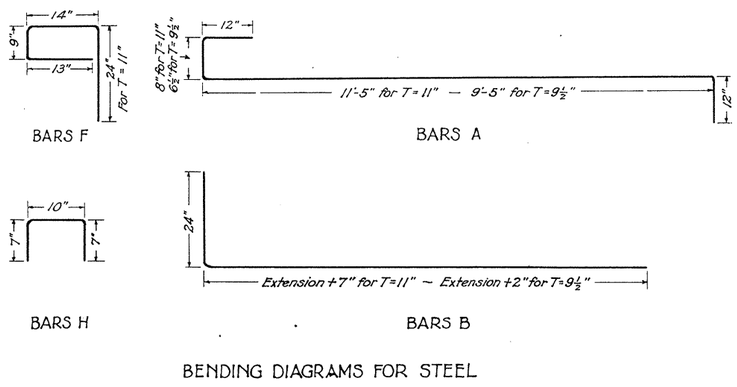
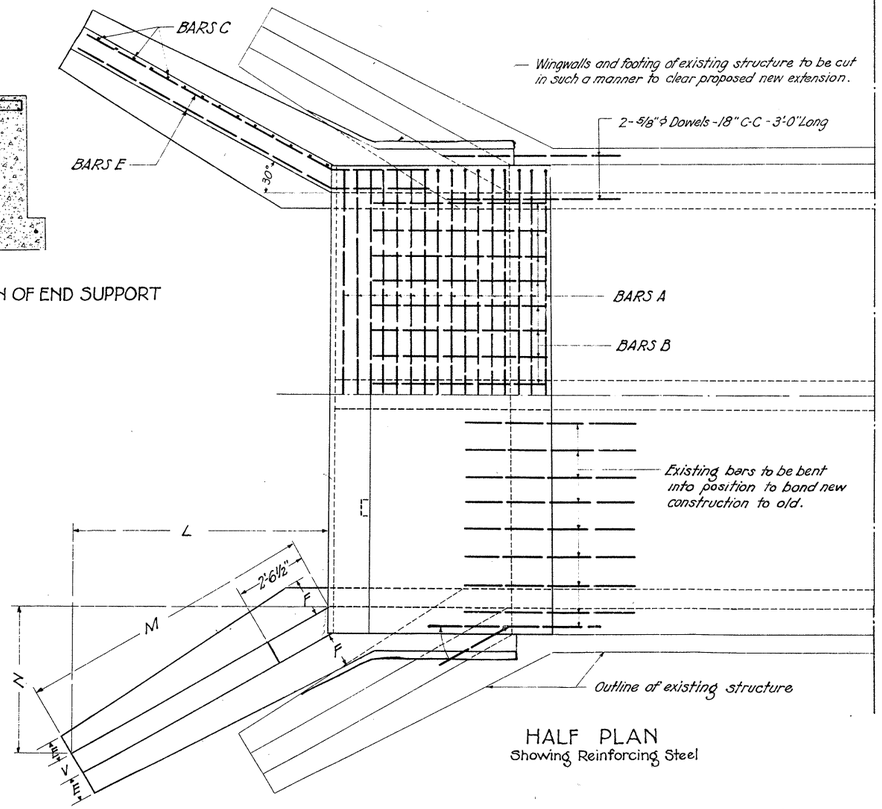
SECTION OF END SUPPORT



BENDING DIAGRAMS FOR STEEL



HALF PLAN
Showing Reinforcing Steel

GENERAL NOTES:-

All concrete shall be Class "A" High Early Str. Maximum size of coarse aggregate shall be 1½". All concrete above the footing shall be cast monolithically. All exposed corners shall be chamfered ¾".

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcing steel are to centers of bars. Reinforcing steel shall be placed with the center of the outside layer of bars 1¼" from the surface of the concrete for barrel steel, and 1½" from the surface of the concrete for all other steel. Where reinforcing bars are spliced a 40 diameter lap shall be used.

Holes shall be drilled for dowels as shown on this plan and as directed by the engineer, and shall be cleaned and filled with neat cement mortar before dowels are inserted.

The concrete bid item shall be class "A" Concrete (High Early Strength). Payment for removing the portions of the existing structure - for cleaning and bending exposed reinforcing steel into position to bond new construction to old - and for drilling, cleaning and grouting dowel holes - as indicated hereon - shall be included in the unit price bid for Class "A" Concrete (High Early Strength).

Specifications of Texas State Highway Department shall govern throughout for materials and construction.

GENERAL NOTES:- All concrete shall be class "A" (for Ext. Structures) Maximum size of course aggregate shall be 1½". All exposed corners shall be chamfered ¾".

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcement are to centers of bars. Reinforcing steel for all sizes shall be placed with the center of the outside layers of bars 2" from the surface of the concrete except top and bottom slabs, as noted. Square twisted bars not considered deformed.

Holes for dowels shall be drilled as shown on this plan and as directed by the Engineer and shall be cleaned and filled with neat cement mortar before dowels are inserted.

Payment for removing the portions of the existing structure, for drilling and grouting dowel holes, and placing dowels, as indicated hereon and as directed by the Engineer, shall be included in the price bid per cubic yard for Class "A" concrete (Extending Structures).

Specifications of Texas State Highway Department shall govern throughout for materials and construction.

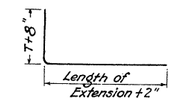
BARS A



BARS B

General Notes on CB-6 Slab and B-4 Bent

All concrete shall be Class "A" High Early Strength. Maximum size of course aggregate shall be 1½". All exposed corners shall be chamfered ¾" unless otherwise noted.

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcing steel are to center of bars. Where reinforcing bars are spliced, a 40 diameter lap shall be used.

Holes for dowels shall be drilled as shown on this plan and as directed by the Engineer and shall be cleaned and filled with neat cement mortar before dowels are inserted.

Payment for removing the portions of the existing structure, as indicated hereon and as directed by the Engineer, for drilling and grouting dowel holes and placing dowels, shall be included in the price bid per cubic yard for Class "A" Concrete (High Early Strength).

Railings for span shall be Type K Mod. and provision for placing same shall be made when the curbs are poured.

	9'-2"	1221.8	16.65
	9'-9"	1269.9	17.01

GENERAL NOTES:-

All concrete shall be Class "A" High Early Strength. Maximum size of coarse aggregate shall be 1½". All exposed corners shall be chamfered ¾".

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcing steel are to centers of bars. Where reinforcing bars are spliced a 40 diameter lap shall be used.

Payment for removing the portions of the existing structure as indicated hereon and as directed by the engineer shall be included in the price bid per Cu. Yd for Class "A" Concrete (High Early Strength)

Payment for Materials used and for the installation of drains shall be included in the unit price bid for Class "A" Concrete (High Early Strength)

GENERAL NOTES :—

All concrete shall be Class "A" High Early Strength. Maximum size of course aggregate shall be 1½". All exposed corners shall be chamfered ¾".

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcing steel are to center of bars. Where reinforcing bars are spliced a 40 diameter lap shall be used.

Payment for removing the portions of the existing structure as indicated hereon and as directed by the engineer shall be included in the price bid per Cu. Yd. for Class "A" Concrete (High Early Strength).

Payment for Materials used and for the installation of drains shall be included in the unit price bid for Class "A" Concrete (High Early Strength).

GENERAL NOTES:- All concrete shall be Class 'A' High Early Strength Maximum size of course aggregate shall be 1½". All exposed corners shall be chamfered ¾" unless otherwise indicated.

Payment for materials used in, and the installation of drains and expansion joints, shall be included in the unit price bid per cubic yard for Class 'A' Concrete (High Early Strength).

All reinforcing steel shall be deformed bars. All dimensions relating to reinforcement are to center of bars. Where splicing of reinforcing bars is permitted, bars are to be lapped 40 diameters. Splicing of longitudnal girder bars will not be permitted.

Concrete in slabs, girders, and curbs shall be poured monolithically.

Railing for span shall be "Type K Mod." and provision for placing same shall be made when the curbs are poured.

Top of floor slab is to be finished to a smooth, even surface in accordance with the specifications. Surfaces of curbs and outside surface of outside girders shall be given a surface finish

Finish of all other surfaces will not be required unless the surfaces are not true or have porous spots or "honeycombed areas" or are not uniform in color;

Payment for removing the portions of the existing structure as indicated hereon and as directed by the Engineer, shall be included in the price bid per cubic yard for Class 'A' Concrete (High Early Strength).

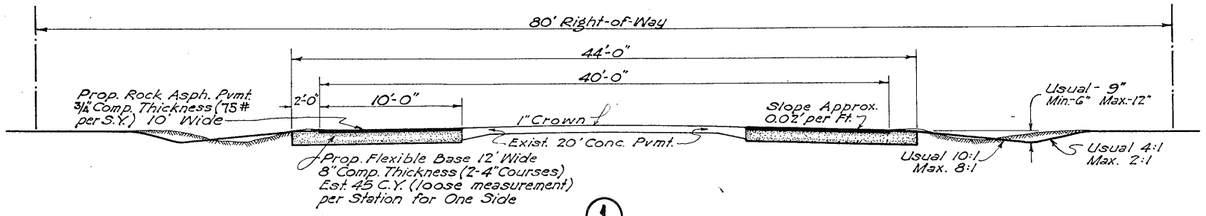
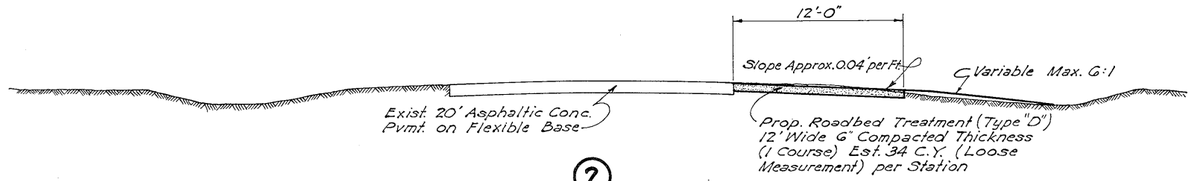
DIETZGEN INDUSTRIAL NO. 119



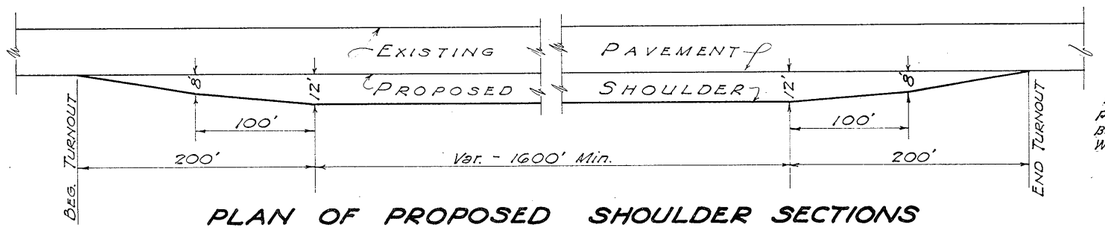
① WIDENING EXISTING PAVEMENT

From Alamo St. to North City Limits of Laredo (Stas. 62+00 - 121+15.1)



② PROPOSED STABLE SHOULDER

To Be Used Between the Stations Shown on Title Sheet and Plan-Profile Sheets



PLAN OF PROPOSED SHOULDER SECTIONS

BASIS OF ESTIMATE

SECTION NO. 1

Rolling:
Base: 1 hour per 50 C.Y.

Sprinkling:
Subgrade: 1500 Gals. per Sta. for both sides
Base: 50 Gals. per C.Y.

Asphalt (RC-2MC)
Prime Coat: .20 Gal./S.Y. 10'-6" wide on each side.
Tack Coat: .10 Gal./S.Y. 10'-6" wide on each side.
Total for both sides: 70 Gals. per Station

Cold Mix Blended Rock Asphalt:
75 #/S.Y. 10'-0" wide on each side.
Total for both sides: 8.33 Tons per Station.

SECTION NO. 2

Rolling:
Roadbed Treatment: 1 hour per 100 C.Y.

Sprinkling:
Subgrade: 750 Gals. per Station.
Roadbed Treatment: 30 Gals. per C.Y.

SUMMARY OF STRUCTURES TO BE EXTENDED

STATION	DESCRIPTION		CLASS A CONC. FOR EXTENDING STRS. Cu. Yds.		REINFORCING STEEL Lbs.		24" STD. REINF. CONCRETE PIPE Lin. Ft.

GENERAL NOTES

All concrete shall be Class A. All exposed corners shall be chamfered ¾ inch.

Reinforcing steel shall be placed with the center of the outside layer of bars 1½ inches from the surface of the concrete. Where reinforcing bars are spliced a 40 diameter lap shall be used.

Dimension "G" shown is for concrete pipe and may be shortened if desired when metal pipe is used.

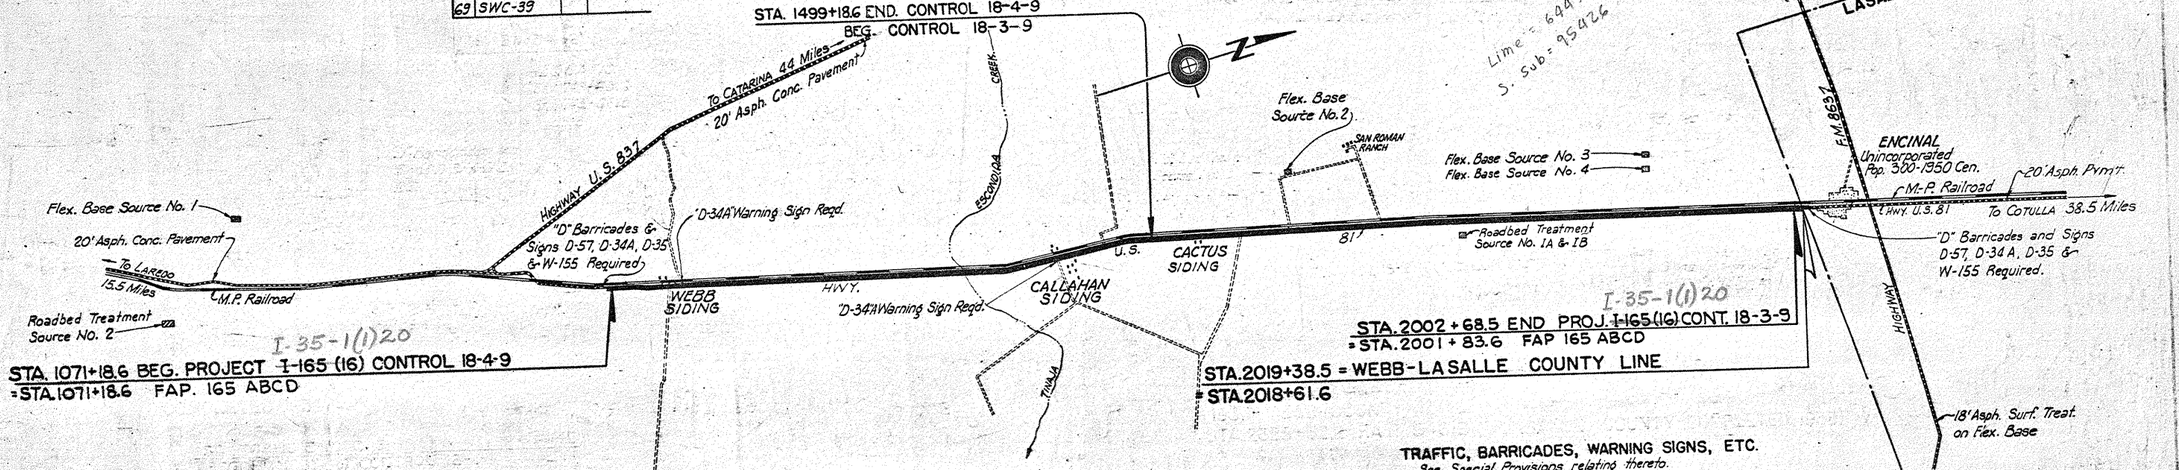
SUMMARY OF FIELD CHANGES

F.C. NO.	DESCRIPTION	LIMITS
1	Raise grade of both expressway lanes and add 2-5"x2"x126', MC5-1 & MCW-F1	Sta. 1104+50 to 1169+34
2	Change Slope from 0.01'/ft. to 0.02'/ft. on the 24 ft. Traffic Lanes. All other slopes to remain the same as called for on the Typical Cross Sections, sheets.	Sta. 1071+18.6 to 2002+68.5
3	Level up roadway section across 17 direct traffic drainage structures with Cl. "B" Conc. and Asphaltic Concrete at the following stations: 1. 1103+42.9 to 1103+96.9; 2. 1154+41.4 to 1154+64.73; 3. 1177+50.6 to 1177+82.68; 4. 1253+18.8 to 1253+41.88; 5. ℄ 1316+10.2; 6. 1325+00 to 1325+23.17; 7. 1354+26.2 to 1354+62.2; 8. ℄ 1530+93.0; 9. 1556+02.2 to 1556+37.12; 10. 1574+15.1 to 1574+43.85; 11. 1657+80.4 to 1658+06.73; 12. 1667+43.2 to 1667+85.2; 13. 1676+11.1 to 1676+43.1; 14. 1858+32.0 to 1858+91.67; 15. 1907+30.4 to 1907+74.4; 16. 1952+36.8 to 1953+24.2; 17. 1996+30.6 to 1996+78.45	See Description.
4	Add 18"x48" Reinf. Conc. Pipe with CH-11-8 Hdwlls. 76' Lt. ℄ of Median.	Sta. 1422+50
5-(Rev.)	Add Exit and Entrance to east expressway lane at Sta. 1602 and Sta. 1615+00 and construct a frontage road between this stations.	Sta. 1602+00 to 1615+00
6	Change Gradation of Type A, Gr. 10, Second Course Aggregate for the prop. Two Course Surf. Treat." on the exist. hwy. to be reconst. & expressway lanes only	Sta. 1071+18.6 to 2002+68.5
7	Cut 30' wide rdwy. ditch between future Rt. Frontage Rd. and prop. expressway lane between Sta. 1068+00 and Sta. 1096+00. Raise rdwy. of prop. right expressway lane from Sta. 1081+50 to Sta. 1102+00	See Description.
8	Stabilized to a depth of 6" with 3% by wt. hydrated lime, subgrade of reconstructed left lane.	Sta. 1071+18.6 to 1320+00



TRAFFIC, BARRICADES, WARNING SIGNS, ETC.

GENERAL NOTES:-

Where required by fixed features or unusual conditions the slopes indicated hereon may be varied when specifically directed by the Engineer.

Curves are to be super-elevated in accordance with SWC-38 (Table I), except when noted otherwise on the Plan & Profile Sheets.

* See Roadbed Treatment Haul Diagram Sheet for Roadbed Treatment compacted thickness and for rates per station. Min. 6" - Max. 14" 13" & 14" depth to be placed in 2 equal courses.

See Special Provisions for Pavements & Surface Treatments which requires a contrasting color of aggregate used for Shoulders & Traveled lanes on this project.

Crossovers & Entrances are indicated on the Plan & Profile Sheets as individual symbols. See Sheet No. 41 for Details of Crossovers & Entrances.

℄ Note: Slope of Roadway changed due to Field Change No. 2.

THESE SECTIONS ARE FOR EAST LANE.

*Heavy Pneumatic Rolling 0.10 Hr./Sta. for Frontage Roads

**Actual percentage to be determined by the Engineer.
***On New Construction from Sta. 1071+18.6 to Sta. 1320+00 only.

GENERAL NOTES:

The mixing required to mix lime with the Flexible Base and Salvaged Flexible Base will be considered as subsidiary to these items and the cost included in the prices bid.

The rates of application and the estimated quantities of aggregate are based on the usual or average gradation of known materials. Before shipping aggregate to the project, the contractor shall furnish the Engineer with samples of the aggregate which he proposes to furnish so that the gradation may be determined and the rates of application changed if necessary.

See special provisions for Pavements and Surface Treatments which require a contrasting color of aggregate used for shoulders and traveled lanes on this project.

The sub-grade on all new construction (except frontage roads) between Sta. 1071+18.6 and Sta. 1320+00 shall be stabilized by mixing lime with the subgrade material to a minimum depth of 6" compacted. Unless otherwise directed by the Engineer, the contractor shall use the "Slurry Placing" method of placing and mixing the lime with the subgrade, flexible base and salvaged flexible base.

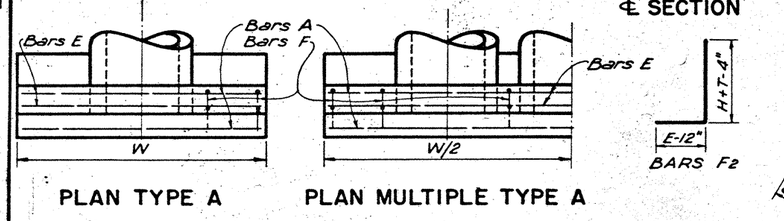
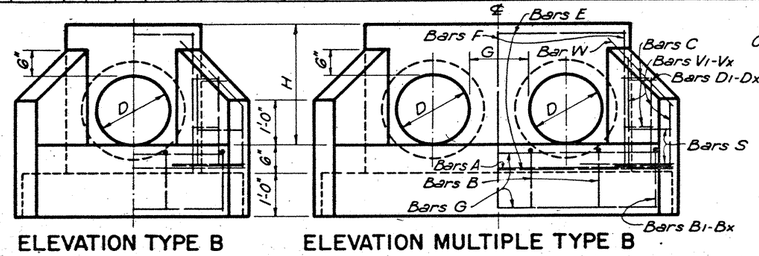
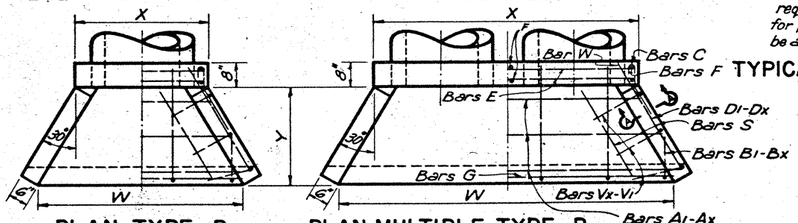
ELEVATION TYPE A — ELEVATION MULTIPLE TYPE A — ℄ SECTION



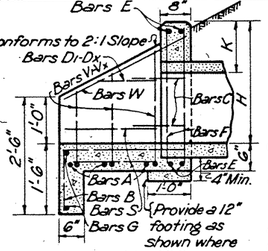
PLAN TYPE A — PLAN MULTIPLE TYPE A — BARS F2

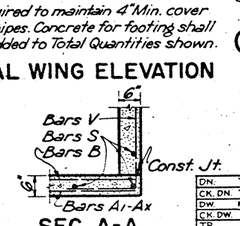


ELEVATION TYPE B — ELEVATION MULTIPLE TYPE B

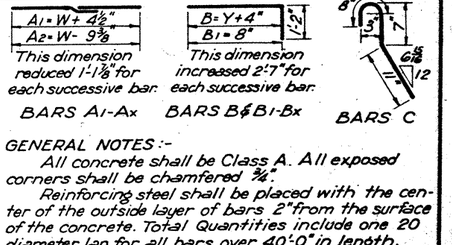


PLAN TYPE B — PLAN MULTIPLE TYPE B — TYPICAL WING ELEVATION





SEC. A-A



GENERAL NOTES :-

All concrete shall be Class A. All exposed corners shall be chamfered ¾".

Reinforcing steel shall be placed with the center of the outside layer of bars 2" from the surface of the concrete. Total Quantities include one 20 diameter lap for all bars over 40'-0" in length.

GENERAL NOTES:-
All concrete shall be Class A.
Dimensions relating to reinforcing steel are to centers of bars.
Steel cover to be 2" from center of outside layer of steel to face of concrete.
Chamfer exposed corners ¾" except as otherwise noted.

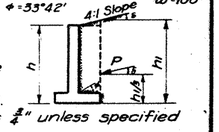
GENERAL NOTES:-

DESIGN:- Wing Walls designed in accordance with Rankine's theory of retaining wall design. Elements of design are shown on sketch at right.



All concrete shall be Class A.

Chamfer all exposed corners 3/4" unless specified otherwise.

All dimensions relating to reinforcing steel are to centers of bars.

Toe walls for culvert and wing walls shall be omitted when structure is founded on solid rock.

PLAN — NOTE BOOK — NO

PROFILE — SHEET C — NOTE BOOK — CKD. BY — NOTED — CHECKED — NO. BY — NOTED — CONSTRUCTION REVISIONS (ITEM)

Slope ⅛" per foot

4'-0" ℄

CROWN DIAGRAM
For Direct Traffic only.
Maintain Constant thickness of top slab.

Clear Width | Clear Width + 1'-4"

ϕ Where length of barrel exceeds 100' provide construction joints at max. spa. of 40'. No break in steel at joints.

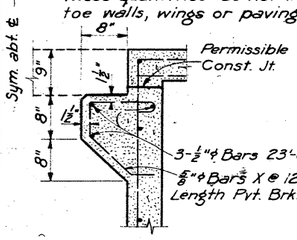
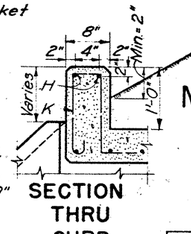
‡ These quantities do not include toe walls, wings or paving bracket



PAVEMENT BRACKET
To be used only when called for on plans.



SECTION THRU CURB

GENERAL NOTES:-

Design Loading: H20-44 or H20 S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class "A". Chamfer exposed corners ¾".

Dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for all bars exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter lap for all longitudinal bars.

Construction joint shown at flow line may be raised a maximum of 6 inches at the option of the Contractor. Adjust length of vertical steel as required.

GENERAL NOTES :-

Design Loading : H-20-44 or H20S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for all bars exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter lap for all longitudinal bars.

Construction Jt. shown at flow line may be raised a maximum of 6" at the option of the contractor. Adjust length of vertical steel as required.

PVT. BRKT. QUANT.	
2-PVT. BRACKETS 24'-0" LONG	
CONC.	STEEL
Cu. Yd.	Lb.
1.19	264

* These quantities do not include toe walls, paving bracket or wings.

GENERAL NOTES:

Design Loading: H 20-44 or H20 S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for all bars exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter bar lap for all longitudinal bars.

Construction Joint shown at flow line may be raised a maximum of 6" at the option of the contractor. Adjust length of vertical steel as required.

* These quantities do not include toe walls or wings.

GENERAL NOTES:

Design Loading: H20-44 or H20 S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for all bars exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter bar lap for all longitudinal bars.

Construction Joint shown at flow line may be raised a maximum of 6" at the option of the contractor. Adjust length of vertical steel as required.

GENERAL NOTES :-

Design Loading : H20-44 or H20S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T. H. D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for all bars exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter lap for all longitudinal bars.

Construction Joint shown at flow line may be raised a maximum of 6" at the option of the Contractor. Adjust length of vertical steel as required.

GENERAL NOTES

Design Loading H20-44 or H20 S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No.1.

All concrete shall be Class "A". Chamfer exposed Corners ¾".

All dimensions relating to reinforcing steel are to centers of bars. The center of the outside layer of bars shall be place 2" from the concrete surface except as shown. One 20 diameter lap for all bars exceeding 40 feet in length are included in the shown quantities.

Toewalls for interior & end units shall be constructed as shown on the typical section of barrel.

44'-0" ROADWAY	158.9	36,558	158.9	36,800

GENERAL NOTES:

Design: H20 or H20-S16 Loading in accordance with A.A.S.H.O. 1944 Standard Specifications and T.H.D. Supplement No. 1 thereto.

All concrete shall be Class A. Chamfer all exposed corners ¾" unless specified otherwise.

All dimensions relating to reinforcing steel are to centers of bars.

NOTE: In general, form supports shall remain in place in each unit until all slabs of the unit have been placed and cured, but in no case shall the supports be removed from a slab until that slab and adjacent slabs of the same unit have been poured and cured in accordance with the specifications.

GENERAL NOTES:

Design: H-20-44 Loading in accordance with A.A.S.H.O. 1949 Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

Dimensions relating to reinforcing steel are to centers of bars.

Average calculated footing pressure:
- Bell Footings = 3.54 T/o'
- Spread Footings 3'x3' = 7.56 T/o'
- Spread Footings 4'x4' = 4.32 T/o'
- Spread Footings 5'x5' = 2.82 T/o'

Drilled Shafts shall be paid for by the linear foot of drilled shaft complete in place.

Bell Footings shall be used only when shown on Bridge Layout.

2 3/8" 5 1/4" 2 3/8"
GENERAL NOTES
All concrete shall be class A. All corners for concrete posts shall be rubbed to 1/2" radius.
Dimensions relating to reinforcing steel are to centers of bars.
Vertical reinforcement for concrete posts shall be set when placing concrete in spans.
Sections for steel plate rail shall be in accordance with the specifications.
One type of rail only shall be used for each project.
Where "Safety-Beam" guardrail is used, the intermediate post details will apply for all concrete posts.
All bolts, nuts, washers and pipe sleeves shall be cadmium coated by the Udylite or Galvanized.
Railing shall be painted in accordance with specifications.
Splices in rail sections shall lap in direction of traffic. See plan.
Horizontal rail members may be spliced at points other than at posts.
Δ Posts shall be set vertically.

GENERAL NOTES

Barricade "A" and accompanying signs shall be used at each end of construction projects closed to all traffic, or closed to all but local traffic, and at points where through traffic is turned onto a temporary route. The plan on sheet 1 shall be used when local traffic is permitted inside the project or permitted to use the road beyond the intersection with the temporary route. When the road is closed to all traffic, one panel and gate section shall be used to form a continuous barricade across the right-of-way.

Barricade "B" and accompanying signs shall be used at the beginning of detours to divert traffic onto the specially prepared roadbed along or near the edge of the right-of-way or around a structure. Sign M-19B shall be used on the barricade and Sign W-155 shall be used in advance of the barricade as indicated on barricade layout.

Barricade "C" and Sign D-34 are for temporary use to control traffic within the limits of a project whenever it is necessary to confine traffic to a specific area on account of some particular construction operation. The areas through which traffic is routed may be the shoulders, ditches, around windrows of materials, excavated trenches, etc. Sign W-155 shall be used in advance of the barricade and flagmen shall be used to direct traffic while work is in progress. If it is necessary that barricades remain in place at night, a sufficient number of flares shall be used to outline the travelway and mark the hazards.

Barricade "D" and accompanying signs shall be used at each end of project only when some form of work is being performed which creates a traffic hazard throughout the entire length of the project. In case of several short sections, which are separated by intervals of considerable distance, each individual section shall be barricaded with this type barricade. This type barricade may also be used at important county road approaches. Sign D-34A shall be used in back of the barricade. When there are a number of short sections barricaded, sign D-34 may be substituted for sign D-34A. Barricades shall be removed upon completion of work and elimination of the hazard on any section. In all cases the barricade shall be so located as to most advantageously warn and direct traffic, and shall be within 1,000 feet of the terminus of such section.

Barricade "E" and accompanying sign shall be used on city streets which are closed to traffic and as advance warning on streets approaching closed areas. When this barricade is used to close a street, a sufficient number of units shall be used to block the entire street. This barricade may also be used to confine traffic to one side of the street or highway for the protection of workmen, maintenance repairs, open trenches, etc., in which case the R-37B sign shall be omitted.

Barricade "C", with appropriate standard signs, may be substituted for Barricade "E" if desirable.

Barricade "F" shall be used on culvert or bridge widening jobs when traffic is routed over the structure. It shall be erected so as to provide maximum roadway width for traffic and allow sufficient space for efficient construction operations behind the barricade.

Signs D-34A, D-35 and D-57 shall be used at each end of all projects open to any public travel, and to supplement Barricades "A" and "D". Other standard signs, Post Barricades, and Flags shall be used as required by plans or as directed by the Engineer to protect and direct traffic.

Barricades, Signs and Flags shall be supplemented by lights placed so as not to interfere with the visability of reflector buttons or reflectorized surfaces, and lights shall be maintained in continuous operation from sunset to sunrise. Lights may be oil flares or flashing electric type.

Barricades shall be constructed of clean, sound lumber cut to the nominal dimensions shown on these details and surfaced on two sides. Barricades shall be of first-class workmanship, and all surfaces above ground shall be painted with an approved brand of white paint to secure thorough coverage and a uniform white color. In no case shall less than two coats be used. The paint for barricade stripes (and Barricade "E") shall be an approved brand of gloss black paint applied to secure uniform coverage.

Signs for Barricades shall be made from wood or metal conforming with the requirements specified below.

Metal for sign plates shall be 12, 14 or 16 gauge steel which conforms with Texas Highway Department "Special Specification for Steel Plates for Highway Markers."

Wood for signs shall be 1 inch stock B and B grade kiln dried lumber or equal, or water-proof resinbonded Exterior grade Plywood, Douglas Fir Plywood Association or equal. All wooden signs made up of two or more boards shall have a 1"x 6" cleat fastened to back of the sign at each end and extending full depth of the sign. In addition to cleats, the boards shall be fastened together with ½ inch corrugated fasteners spaced at not more than 12 inch centers and driven from the back of the sign. In localities where untreated wood rots rapidly, it is recommended that wood used for signs be treated with either Chromated Zinc Chloride, Wolman Salts, or Pentachlorophenol.

The designation of Metal and Wood as primary materials for signs shall not be interpreted to exclude other suitable materials now or hereafter available.

Points and coloration shall be similar to Texas Highway Department standards as outlined in Texas Manual on Uniform Traffic Control Devices for Streets and Highways. Where Yellow is specified it shall conform with color cards for "Highway Yellow" available from U.S. Bureau of Public Roads.

Reflectorization may be by means of approved reflective coatings on the sign background. Either Glass Reflector Buttons or Crystal Plastic Reflector Buttons conforming with Texas Highway Department Reflector Button Specifications may be used as an alternate means of reflectorization. Size and spacing of reflector buttons shall be as shown on details. All reflecting elements shall reflect white light, except that if a reflecting coating is used as a background of a yellow sign, it shall reflect yellow light.

Diagonal black stripes and reflector buttons shall be as indicated on plans or on these details.

Barricades designed for moving or reuse, except "C" and "E", shall be erected with bolts. The Contractor shall maintain each barricade and sign in a condition equal to that required by these details.

In construction of legs for portable barricades, steel may be substituted for timber, provided that the width of base will not be less than that shown on the standard detail.

All sign lettering shall be clear, open rounded type capital letters as approved by the Joint Commitee on Uniform Traffic Control Devices, its sponsoring agencies and as published by the Bureau of Public Roads. Striping and lettering shall be of first class workmanship equivalent to that of Highway Department standard signs.

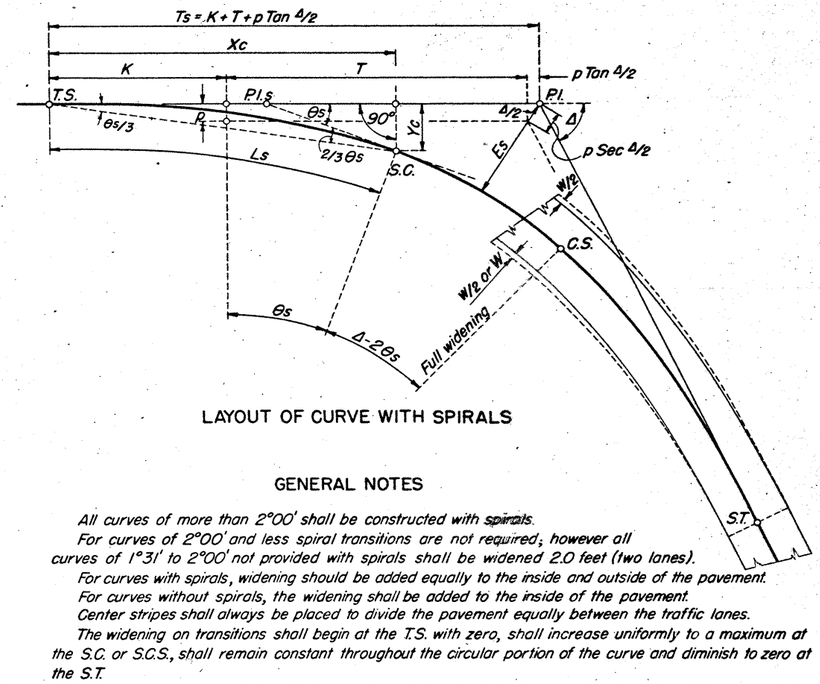
SYMBOLS & FORMULAE

P.I. = Point of intersection of the main tangents.
Δ = Intersection angle between the main tangents of the entire curve.
D = Degree of the circular curve.
R = Radius of the circular curve.
E = External of the circular curve.
T.S. & S.T. = "Tangent to Spiral" and "Spiral to Tangent," common point of tangent and spiral.
S.C. & C.S. = "Spiral to Curve" and "Curve to Spiral," common point of circular curve and spiral.
S.C.S. = "Spiral to Curve to Spiral," common point of end and beginning transitions of curve transitional throughout.
e = Full superelevation per foot of crown width.
W = Total extra widening through the circular portion of the curve.
Θs = The spiral angle = LsD/200. Intersection angle between the tangent of the complete curve and the tangent at the S.C. or C.S.
Ls = Length of spiral (or length of transition for superelevation and widening of circular curves).
L.C. = Straight line chord distance, T.S. to S.C. or S.T. to C.S.
Xc = Distance from the T.S. to a point on the main tangent opposite the S.C. = Ls - .00003 Ls(Θs)².
Yc = Right angle distance from a point on the tangent opposite the S.C. to the S.C. = Xc Tan Θs/3
Ts = Tangent distance P.I. to T.S. or P.I. to S.T. = K + T + (p Tan ½Δ).
T = Tangent of circular curve.
K = Distance from the T.S. or S.T. to a point on the tangent opposite the P.C. or P.T. of the circular curve produced = Xc - R Sin Θs.
p = Offset distance of the circular curve from the tangent = .00000727 (Ls)² D or approximately ¼ Yc.
Es = External of the offset circular curve = E + p Sec Δ/2.



LAYOUT OF CURVE WITH SPIRALS

GENERAL NOTES

All curves of more than 2°00' shall be constructed with spirals.

For curves of 2°00' and less spiral transitions are not required; however all curves of 1°31' to 2°00' not provided with spirals shall be widened 2.0 feet (two lanes).

For curves with spirals, widening should be added equally to the inside and outside of the pavement.

For curves without spirals, the widening shall be added to the inside of the pavement.

Center stripes shall always be placed to divide the pavement equally between the traffic lanes.

The widening on transitions shall begin at the T.S. with zero, shall increase uniformly to a maximum at the S.C. or S.C.S., shall remain constant throughout the circular portion of the curve and diminish to zero at the S.T.

In constructing one half the widening on the outside of spiraled curves, the tangent outside edge of the pavement shall be extended and adjusted into the curve of the widened spiral to avoid a reversal of curvature near the T.S.

Curves for which spiral transitions are not provided shall have the superelevation and widening introduced in the same manner and over the same length as the preferred lengths of spirals given in the tables.

A straight line slope shall be used on all superelevated curves, except for rigid pavements on curves of 2°30' and less, where the normal pavement crown shall be retained, unless otherwise provided in the plans.

The width of traffic lanes on curves shall not be less than 10', 11', or 12' as given in the tables for the respective degrees of curve, regardless of the normal pavement width.

For pavements with normal lane widths of 12' or more, widening in excess of the normal lane width is not required, but may be used if conditions warrant.

The spiral lengths shown in Tables I and 2 are preferred lengths and are based on an acceleration rate of 2 feet per second toward the center of the curve, modified to restrict the rise of the outside crown line to a slope of 1/250 with respect to the centerline grade. (Revolving about the centerline.) The crown width is assumed as 36' for Table I and 30' for Table 2 and the crown slope as 3/16" per ft.

Where superelevation is revolved about the inner crown line the preferred transition lengths given in the Tables are approximately correct; however the transition length shall be such that the slope of the rise of the outside crown with respect to the inside crown shall not exceed 1:150.

Maximum safe speed in miles per hour = √15R(e + 0.15).

FOR SPIRAL LENGTH TO BE USED ON THIS PROJECT AND OTHER IDENTIFYING DATA, REFER TO PLAN-PROFILE SHEETS OR TO THE TYPICAL CROSS SECTION SHEET.

DETAILS FOR ATTAINING SUPERELEVATION

Superelevation values ("e") shown in the tables are superelevations per foot of pavement width to be obtained at the S.C. and C.S. and throughout the circular curve. Superelevation for any point on the spiral is to be obtained in accordance with the diagrams shown above except in cases where center lines of curves are not on uniform grade, in which case a profile of the outer and inner crown lines are to be plotted and the grades adjusted to secure a satisfactory riding surface and appearance. On rigid pavement types, where the crown is to be left in the pavement, the plane referred to in the diagram shall be construed to mean a plane through the pavement edges.

Short vertical curves may be inserted if desired, at points "A," "C," and "D." They may be inserted by eye adjustment of stakes or forms in the field. (See diagrams).

TOTALS	71.63	10,296	1

GENERAL NOTES

Reinforcing in top deck of 2-5'x2', MC5-1, shall be modified to fit into opening for Grate Inlet as shown on details.

Two bars, 9'-4" long shall be put at top of inlet, as shown on detail

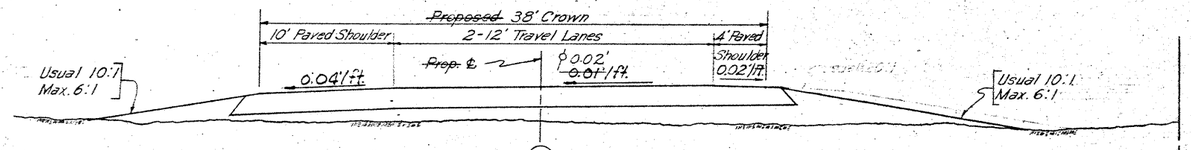
1

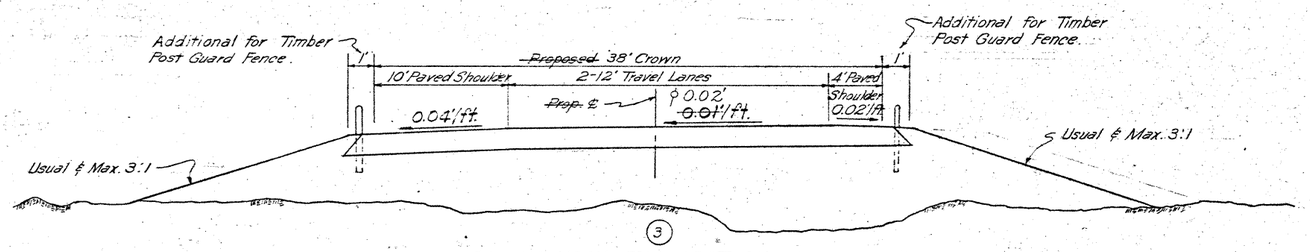
REGULAR ℄ CUT SECTION

* Grade 10 to contrast in color with Grade 4 Mod. used on shoulders. (Same color may be used for Grade 4 Mod. in center ℄ shoulders.)



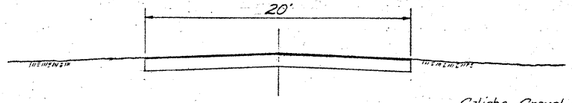
2

LOW FILL SECTION



3

HIGH FILL SECTION



EXIST. ASPHALT PAVEMENT

Caliche Gravel Base Ave. Thickness Approx. 12".

GENERAL NOTES:
See Special Provision for Pavements and Surface Treatment which requires a contrasting color of Aggregate used for Shoulder and Travel Lanes on This Project.

℄ Note:
Slope of Roadway changed due to Field Change No. 2.

GENERAL NOTES

This design is adopted from Texas Highway Department Standard for "Single Culverts-Normal," SC-N, as prepared in May, 1948.

All concrete shall be Class A. All exposed corners shall be chamfered ¾".

All dimensions relating to reinforcing bars are to centers of bars.

Quantities of concrete and reinforcing steel shown hereon are for a 10Ft. extension of one end of the barrel. For other lengths of extension adjust the bar lengths or number, and the total quantities of concrete and steel according to "Quantities per Lin. Ft. of Extension."

Existing bars exposed by break-back shall be cleaned and bent into position to provide a tie to the new concrete extension.

The removal of the existing structure to the break-back line shown will not be paid for directly but shall be considered subsidiary work to the bid item "Class A" Concrete for Extending Culverts."

The quantities for the new wings are not included hereon. Refer to the Standard "Flared Wings-Normal" (FW-N) or "Parallel Wings-Normal (PW-N) for wing quantities and design. Refer to plans for proposed type of Wing.

*These quantities do not include toe walls or wings.

GENERAL NOTES:

Design: H20-44 or H20 S16-44 Loading in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 30 diameter lap for each bar exceeding 40 feet in length. Barrels having a length of over 80 feet shall have quantities recalculated to include an additional 30 diameter lap for each longitudinal bar.

Construction Joint shown at flow line may be raised a maximum of 6" at the option of the contractor. Adjust length of vertical steel as required.

GENERAL NOTES:-

Design Loading: H20-44 or H20 S16-44 in accordance with A.A.S.H.O. 1949 Standard Specifications and T.H.D. Supplement No. 1.

All Concrete shall be Class "A" for extending structures. All exposed corners shall be chamfer ¾".

Dimensions relating to reinforcing steel are to centers of bars.

Shaded portions of existing structure are to be removed.

Existing Bars exposed by breakback shall be cleaned and bent into position to bond to the new construction.

All welding of reinforcing shall be done with E-6016 or E-7016 electrodes.

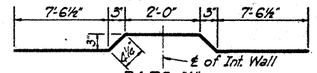
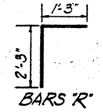
Remove shaded portions of existing structure.

TYPICAL SECTION FOR MC8-1 Mod. EXTENSION
FOR STEEL ARRANGEMENT OTHER THAN BARS SHOWN SEE STANDARD MC8-1



BARS "A"



BARS "R"

NOTE :-
See Standard MC8-1 for bending details of other bars.

GENERAL NOTES:-

Designs are adopted from Texas Highway Department Standards MC10-1 & MC8-1

All concrete shall be Class "A" for extending structures. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to center of bars.

Quantities of concrete and reinforcing steel shown hereon are for Barrel Extensions and Wings.

For Steel arrangement in the barrels and for dimensions relating to reinforcing steel not shown on this page, refer to Texas Highway Department Standards MC10-1 and MC8-1. See Standards MCW-F1 & MCW-F2 for Wing dimensions and design.

Existing bars exposed by breakback shall be cleaned and bent into position to bond to the new construction.

All welding of reinforcing steel shall be done with E-6016 or E-7016 electrodes.

Lengths shown for transverse bars are for estimating purposes only. All transverse bars to be cut from stock lengths at job site.

GENERAL NOTES:-

Design H-20-S16 Loading in accordance with A.A.S.H.O. 1953 Standard Specifications and T.H.D. Supplement No. 1.

All Concrete shall be Class "A" for extending structures. All exposed corners shall be chamfer ¾".

Dimensions relating to reinforcing steel are center of bars.

Existing Bars exposed by breakback shall be cleaned and bent into position to bond the new construction.

All Welding of reinforcing steel shall be done with E-6016 or E-7016 Electrodes.

Length of Bars "A" & "E" of Abut. Walls and Bars "B" & "H" of Interior Bent as shown in Tables of Sheet 2 of this Details are approximate. These Bars should be field Cut by the Contractor to fit existing condition in old structure.

Footing Pressure : 1.5 T/s'.

Rev. 4-5-66 | 21 | WEBB | 18 5/6 5/56 | IH-35

GENERAL NOTES AND SPECIFICATION DATA:

GENERAL
All operations shall be conducted in such a manner as to insure safety of public travel at all times. Operations shall be so conducted as to avoid spilling or dropping on the pavement dirt, mud, or other materials that might endanger public travel. Any such materials so dropped or spilled shall be immediately cleaned from the pavement. The term pavement shall mean any pavement or asphalt surface treatment including paved shoulders.

In general the direction of public travel along the several pavement shall not be changed. The regular operation of heavy material hauling equipment, such as scrapers along any pavement will not be permitted. If such heavy material hauling equipment is used, crossing of pavements shall be made at regular established crossings as provided below. Adequate protection to avoid damage to the pavement and to protect the travelling public shall be provided at all crossings.

All equipment or vehicles shall travel in the same direction as provided for public travel when travelling along or adjacent to any pavement.

Crossings of main lanes will be permitted only at existing crossovers, provided that they occur at intervals of one mile or less. If existing crossovers are more than one mile apart, the Contractor, with the approval of the Engineer, may construct one temporary crossover. If existing crossovers are more than two miles apart, the Contractor, with the approval of the Engineer, may construct two temporary crossovers. The construction and removal of these temporary crossovers will not be paid for directly but shall be considered subsidiary to other Contract items.

The movement of equipment such as cranes, tractors, etc. across any pavement roads shall be restricted to such occassional crossings as are absolutely necessary to reach the working site. Adequate protection approved by the Engineer for the pavement and for the travelling public during such crossings shall be provided by the Contractor. Crossings shall be made in a manner to interfere with traffic for as short a time as practicable.

Access to private property shall be maintained at all times.

The Contractor shall be required to furnish, in addition to the barricades and signs shown on the title sheet of the plans, such other signs and/or flagmen, to be placed and kept not less than 1000 feet from the work in progress to warn the oncoming traffic of the construction work, as the Engineer may deem necessary.

ITEM 132: The Contractor will not be required to scarify slopes along main lanes upon which borrow is to be placed so as not to disturb the existing vegetation.

ITEM 213: The "Medium Pneumatic Tire Roller" will be permitted in lieu of the "Light Pneumatic Tire Roller" and paid for on an equal hour basis as "Roll (Light Pneumatic Tire)".

ITEM 200: The Flexible Base Source shall be stripped as directed by the Engineer.

ITEM 232: Flexible Base (Ty A Gr 2) shall conform to the following specifications:

Grading Requirements:	
Retained on 1 3/4" Sieve	0%
Retained on 3/8" Sieve	20% to 60%
Retained on No. 4 Sieve	40% to 75%
Retained on No. 40 Sieve	60% to 85%

The P. I. of the material shall not be greater than 12 before lime is added. It will not be necessary to rerun the P. I. on the material after the lime has been admixed.

The criteria for approval of sources and approval of an area and/or depth of layers in the source from which the material is to be secured, based on preliminary tests, shall be that the material will be Triaxial Class 1 after 1% of lime is admixed. The method of triaxial testing shall be in accordance with Test Method Tex-117-E.

Should the Contractor elect to use other than State optioned sources his attention is called to the fact that the preliminary Standard Triaxial Test will require approximately 15 days and he shall advise the Engineer sufficiently in advance of the location of the source to avoid delay.

The Flexible Base Material shall be stockpiled in areas indicated in the plans or as directed by the Engineer. In these areas the material shall be stockpiled in at least three successive horizontal layers not to exceed two feet in height until a seven day supply of material has been stockpiled and the oldest material shall be removed from the stockpile in successive vertical lifts. The stockpiling operation shall continue in such a manner so that there will always be left in the stockpile each day at least a seven day supply or enough to complete the project. The stockpile shall never exceed the working height of the equipment used to reload the material.

ITEM 246: Foundation Course shall conform to the following specifications: Gradation requirements are 50% to 85% retained on the #40 mesh sieve. The P. I. of the material shall not be greater than 12 before the addition of lime.

The criteria for the approval of the source and the special requirement for sources other than State optioned sources shall be the same as for Item 232 shown above.

The Foundation Course Material shall be stockpiled the same as is shown for Item 232 above.

ITEM 260 & 262: Lime may be applied, mixed and compacted in one course, provided adequate equipment is used. Lime spreader box will not be required if lime can be distributed at a uniform rate, to the satisfaction of the Engineer.

The dry method of application of lime will be required where the lime is to be added to naturally wet materials; otherwise either the dry or the slurry method of application may be used.

The minimum seven day curing period and the minimum two day requirement before opening to traffic will not apply to this project. The lime treated subgrade shall be kept moist until sealed or covered by other material.

ITEM 314: Emulsified Asphalt shall be mixed with the top portion of the base as directed by the Engineer. After the base has been finished to the required section and grade, a thin film of Emulsified Asphalt (EA-HVMS) or (EA-HVMS Mod) shall be applied the full width of the base in several applications at the rate specified by the Engineer. Usual rates of application are from 0.005 to 0.020 Gal. per S.Y. of treated base. Emulsified Asphalt treatment shall consist of several applications of mixture of Emulsified Asphalt and water. The amount of Emulsified Asphalt in the mix shall be from 2% to 15% by volume of the total mix.

FED. RD. DIV. NO.	STATE	FEDERAL PROJECT NO.				SHEET NO.
6	TEXAS	I 35-1(18)007, etc.				2
STATE DIST. NO.	COUNTY		CONT.	SECT.	JOB	HIGHWAY NO.
21	WEBB		18	5-6	16-58	IH 35

ITEM 320: One Course Surface Treatment shall not be applied when the air temperature is below 70° F and is falling, but it may be applied when the air temperature is above 60° F and is rising. Asphaltic material may be placed when the air temperature is between 70° and Falling and 50° and rising by preheating the aggregate to 280° F.

The rate of application and the estimated quantities of aggregate are based on the usual or average gradation of known material. Prior to shipping aggregate to the project, the Contractor shall furnish the Engineer with the samples of aggregate he proposes to use so that the gradation may be determined and the rate of application changed if necessary.

The gradation requirements for Aggregate Type A Grade 5 (Mod) are the following percentages by weight:

Retained on 1/2" Sieve	0%
Retained on 3/8" Sieve	0% to 10%
Retained on No. 4 Sieve	75% to 100%
Retained on No. 10 Sieve	95% to 100%

The modification of Asphalt EA-HVMS shall be as follows:

1. The penetration of the residue at 77° F, 100 gr., 5 sec. shall be a minimum 80, maximum 110.
2. The ductility of the residue at 77° F, 5 cm/min. cms shall be a minimum of 100.

ITEM 330, 340, 350 & 1222: In addition to the tack coat materials specified in these specifications, the Contractor, if he so desires, may use EA-HVMS, EA-HVMS (Mod) or a Rapid Curing (RC) Liquid Asphalt. The Rapid Curing (RC) Liquid Asphalt shall meet the following requirements:

Kinematic Viscosity at 140° cs	250-500	Residue from distillation at 680° F percent by volume	65+
Flash Point (Open Tag.) ° F	80+	Test on residue from distillation :	
Distillation:		Penetration at 77° F, 100 g., 5 sec.	80-120
Distillate (Percent of total distillate to 680° F		Ductility at 77° F cms	100+
to 437° F	35+	Solubility in Carbon Tetrachloride, %	99.5+
to 500° F	60+	Water, %	0.2-
to 600° F	80+		

The recommended application and mixing temperature range is 140° F - 210° F. The maximum allowable heating and storage temperature of this cut-back asphaltic material is 230° F.

Articles 330.6, 340.6, 350.6 & 1222.6 CONSTRUCTION METHODS:
All air Temperatures called for in these paragraphs shall be raised 10° F.

ITEM 340 & 1222: Prior to placing the Asphaltic mix on the pavement on the roadway and shoulders of the existing surface it shall be cleaned of all dirt and foreign material.

If the Contractor so elects, he may construct the shoulders with the same materials, with the same specification requirements, as Item 340, Type A, Material. Payment in this event would be as Item 1222.

If Item 340, Type A, Material is used in lieu of Item 1222 material then the required construction joint location for the base courses shown on Pavement Section A on Sheet No. 3 may be modified to lay the base courses in four strips of approximately equal width each but with the joints between the first and second courses staggered.

ITEM 350: Lime (Ty A or B) shall be added to the mineral aggregate at the rate of 1/2 of 1% by weight. This lime will be added to the aggregate at the cold feeder belt by means of a vibrating or reciprocating hopper with attached water sprayer or any other suitable machanical device approved by the Engineer. This lime will not be paid for directly, but shall be included in the price bid for Item 350 "Hot Mix-Cold Laid Asphaltic Concrete Pavement".

ITEM 320, 330, 340, 350: The Contractor shall select an aggregate for surfacing shoulders that will result in a permanently contrasting color and texture to the asphaltic concrete pavement used on the adjacent travelled lanes. The aggregate selected shall meet the approval of the Engineer.

ITEM 421: The type of surface finish on this project shall conform to Item 420.24 and shall be done in accordance with the requirements of a "Type 2 Finish".

ITEM 496: Material on this project not considered salvable by the Engineer shall become the property of the Contractor and removed from the project to sites out of sight of the highway.

ITEM 560: Posts for Metal Beam Guard Fence (CI B) shall be timber. The Contractor will be required to clean and paint all cut edges and bolt holes, if rail is fabricated after galvanizing in accordance with paragraph four of Article 560.4, at his expense.
ITEM 901: Borrow (Delivered)(Ordinary Compaction) shall be Type B Class 1. The criteria for approval of sources and the criteria for the approval of the areas and/or depth or layers in the source from which material is to be secured, based on preliminary tests and such other occasional tests as found necessary by the Engineer shall be as follows:

1. The P. I. shall not exceed 25.
2. The material shall be such as to produce a well-bonded embankment.
   Materials having a P. I. of 4 or less are usually doubtful as to cohesive quality but may be used if the material will properly bond.

The method of removing this material and placing in the embankment shall be such as to produce as uniform a material as practical.

The Contractor's attention is called to the fact that the preliminary test for the approval of sources will required approximately 7 days and that he shall advise the Engineer sufficiently in advance of the location of the source to avoid delay.

No excavation of borrow material which would result in creating a pit below natural ground within 500' of any road designated or maintained as part of the system of roads under the jurisdiction of the State Highway Department will be permitted without the written approval of the Engineer, and no such excavation of borrow within 500' of any other public road will be permitted without the consent of the County Commissioner's Court or City Commission if within a City Limits. The securing of borrow material by the excavation of ditches for beneficial drainage purposes, the removal of spoil banks, and the removal of hills for land levelling within 500' of any public road will be permitted.

FED. RD. DIV. NO.	STATE	FEDERAL PROJECT NO.				SHEET NO.

STATE DIST. NO.	COUNTY		CONT.	SECT.	JOB	HIGHWAY NO.
21	WEBB		18	5-6	16-58	IH 35

Any rolling required on delivered borrow material shall be done with a light pneumatic tire roller. The medium pneumatic tire roller will be permitted, but shall be paid for on an equal hourly basis as a light pneumatic roller.

ITEM 1222: The stability shall be not less than 30%.

Article 2(1)(a) Coarse Aggregate: Coarse Aggregate will be tested in accordance with the Test Method Tex-406-A for decantation, and material removed will not be more than 2 percent by weight. The abrasion shall not exceed 40 percent when tested by the Los Angeles Abrasion Test.

Article 2(1)(b) Fine Aggregate: The last sentence is hereby voided and not replaced.

Article 3(1) Types: The master grading for Type A shall be as follows:

Passing 2" Sieve	100
Passing 2" Sieve, retained on 7/8" Sieve	20 to 40
Passing 7/8" Sieve, retained on 3/8" Sieve	15 to 40
Passing 3/8" Sieve, retained on #10 Sieve	15 to 30
Total retained on No. 10 Sieve	60 to 80
Passing No. 10 Sieve, retained on No. 80 Sieve	5 to 30
Passing No. 80 Sieve, retained on No. 200 Sieve	2 to 15
Passing No. 200 Sieve	0 to 8

Artcile 6 Construction Method: All courses shall be placed with the specified spreading and finishing machine except that on narrow strips and small areas as set out in Article 6(4)(c) the material may be placed as set out in Article 6(4)(c).

SIGNING AND DELINEATION

ITEM 7: PROTECTION OF TRAFFIC:
Erection of Interstate signs shall be scheduled to interfere as little as possible with vehicle traffic on the expressway. The following requirement must be observed: Portable W-155 signs shall be displayed on the median and shoulder 700' in advance of any work being performed. Signs shall be removed from view at all times when work is not in progress. Flagmen and appropriate signs shall be used for the full time that construction requires Public Travel at a reduced speed and where construction equipment occupies a travel lane or adjacent shoulder.

SCOPE OF WORK: It is the intent of these plans to provide for a complete system of Interstate signs installed at the locations indicated in these plans. All work, material, and services not expressly called for in the specifications or not shown in the plans, which may be necessary for complete and proper construction shall be performed, furnished, and installed.

Upon completion of the work and before acceptance and final payment is made, the Contractor shall clean, remove rubbish from the site of the work, restore in an acceptable manner all property, both public and private which has been damaged during the prosecution of the work, and leave the site of work in a neat and presentable condition throughout.

No extra compensation will be allowed for fulfilling the requirements stated above.

All signs shall be erected according to the station number shown on the Plan and Profile sheets except that the Engineer may shift a sign in order to secure a more desirable location. The Engineer will stake all sign locations, and no changes in these locations shall be made without prior approval of the Engineer.

ITEM 7161: Dimensions for corner radii above 3" may vary plus or minus 1". Dimensions for border width may vary as much as plus 1/2". Borders and corner radii be of matching widths.

ALTERNATE NO. 2: Aluminum Signs Type E can be used as an alternate for some Plywood signs as indicated in the Sign Tabulation Sheets. Length of Posts shown for these signs have been figured on the basis of Plywood Type A or Type B being the sign blank material according to Standard Plan Sheet SMD-88, should contract be awarded on basis of Aluminum Signs Type E, that is 2 1/2" honeycomb aluminum sign blanks, the Contractor must order post lengths according to Standard Plan Sheet SMD-10.

ITEM 7 (Cont'd.)

THE CONTRACTOR SHALL USE LIGHTS TO MARK THE FOOTING NEAREST THE PAVEMENT EDGE OF THROUGH TRAFFIC LANES THAT ARE OPEN TO TRAFFIC FOR EACH TRAFFIC-SIGN SUPPORT, AND FOOTINGS AT OTHER LOCATIONS AS DIRECTED BY THE ENGINEER. THE LIGHTS, WHICH MAY BE FLARES OR THE FLASHING, ELECTRIC TYPE, SHALL BE USED BETWEEN SUNSET AND SUNRISE FOR THE PERIOD OF TIME FROM THE BEGINNING OF CONSTRUCTION OF THE FOOTING THROUGH THE ATTACHMENT OF THE SIGN (S) TO THE SUPPORT.

IG-5
11'-6" x 5'-0"

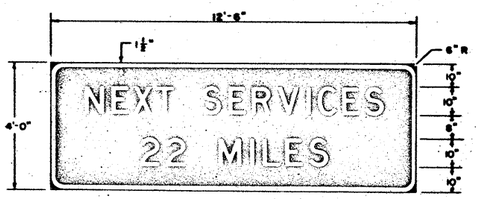
IG-5A
12'-6" x 5'-0"



IG-8
12'-6" x 4'-0"

GENERAL NOTES

The alphabets and lateral spacing between letters and words shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets with any applicable modifications stated in the American Association of State Highway Officials Manual for Signing and Pavement Marking of the National System of Interstate and Defense Highways - 1961, and/or subsequent revisions thereto. Lateral spacing of text shall be such as to provide a balanced appearance.

For IG-1, IG-2, IG-3, and IG-3A signs, the letters, borders, numerals, and arrows shall be reflectorized removable copy conforming with the specifications, and except for signs which are independently illuminated, the background shall be an Interstate Green reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications. For signs which are independently illuminated, the background shall be Interstate Green porcelain enamel conforming with the specifications.

For IG-4, IG-5, IG-5A, and IG-8 signs, the letters, borders, numerals, and arrows shall be reflectorized removable copy conforming with the specification, and the background shall be flat surface reflective sheeting having an Interstate Blue Color.

All removable copy letters, numerals, arrows, and borders used on signs for this contract shall be of the same manufacture.

The sign blanks for all signs which are independently illuminated shall be extruded aluminum, multi-increment aluminum panels, or 1 (one) inch honeycomb aluminum panels as specified in the contract award. Should the contract award specify the use of extruded aluminum alloy panels, the aluminum alloy shall conform with the item, "Aluminum Signs Type B." Should the contract award specify 1 (one) inch honeycomb panels, the aluminum alloy shall conform with the item, "Aluminum Signs Type C." Should the contract award specify multi-increment panels, the aluminum alloy shall conform with the item, "Aluminum Signs Type D." The aluminum alloy shall be a minimum of 0.109 inch thick for the face section of extruded panels, 0.040 inch thick for 1 (one) inch honeycomb panels, and 0.125 inch thick for multi-increment panels. The sign blanks for all signs shown on this sheet which are not independently illuminated shall be 5/8 inch thick plywood or 2 1/2 inch honeycomb panels. Plywood signs shall conform to Standard Sheet SMD-8 and the specifications. The 2 1/2 inch honeycomb panels shall be aluminum alloy conforming with the item, "Aluminum Signs Type E" and Standard Sheet SMD-10. The aluminum alloy shall be a minimum of 0.063 inch thick for the front face of the panel, and a minimum of 0.040 inch thick for the back face of the panel. The sign area outside the corner radius need not be trimmed.

When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

CARDINAL DIRECTION MARKERS

GENERAL NOTES:

Alphabets and lateral spacing between letters shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters, arrows, and borders shall be white reflective, and the background shall be Interstate Blue reflectorized with blue transparent ink on a white reflectorized flat surface. Letters, arrows, and borders shall be reverse screened.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with the Item, "Aluminum Signs Type A," or one piece 12 gauge sheet steel conforming with the Item, "Sheet Steel Signs Type A."

For sign blank punching details, see sheet on "Sign Blank Punching Details."

GENERAL NOTES FOR DIRECTIONAL ARROW MARKERS AND CARDINAL DIRECTION MARKERS

Alphabets and lateral spacing between letters shall conform with the U. S. Bureau of Public Roads standard roadside capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters, arrows, and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications.

The letters, arrows, and border shall be applied directly to the surface of the reflective material by the silk screen process.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with **the Item**, "Aluminum Signs Type A," or one piece 12 gauge sheet steel conforming with **the Item,** "Sheet Steel Signs Type A."

For sign blank punching details, see sheet on "Sign Blank Punching Details."

STANDARD U. S. AND STATE HIGHWAY ROUTE MARKERS

GENERAL NOTES FOR U. S. AND STATE HIGHWAY ROUTE MARKERS

For the MI-3F, MI-3R, MI-4F, and MI-4R Route Markers a print of the Texas State outline shall be obtained from the TEXAS HIGHWAY DEPARTMENT to be used for making a stencil.

For all Route Markers on this sheet, except MI-2, MI-4F, and MI-4R, letters, numerals, and border shall be black and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads conforming with the specifications. The letters, numerals, and border shall be applied direct to the surface of the reflective material by the silk screen process.

For the MI-2, MI-4F, and MI-4R Route Markers, the U.S. and State outline shall be white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads conforming with the specifications. The numerals and background shall be black and applied by the reverse screen process.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with the Item "Aluminum Signs Type A," or one piece 12 gauge sheet steel conforming with the Item, Sheet Steel Signs Type A.

For sign blank punching details see sheet on "Sign Blank Punching Details."

ARROW DETAILS

GENERAL NOTES FOR REGULATORY SIGNS

Alphabets and lateral spacing between letters and words shall conform with U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

Unless otherwise noted under specific signs, all letters, numerals, arrows, and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads, conforming with the specifications. Reflective sheeting for STOP signs shall have a flat surface.

Unless otherwise stated all letters, numerals, arrows and borders shall be applied direct to the surface of the reflective material by the silk screen process.

The sign blanks shall be one piece, 5/8 inch thick plywood conforming with the specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

GENERAL NOTES FOR WARNING SIGNS

The alphabets and lateral spacing between letters shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters, symbols, and borders shall be black, and the background shall be an Interstate yellow reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications.

Letters, symbols, and borders shall be applied direct to the surface of the reflective material by the silk screen process.

The sign blanks shall be one piece, 5/8 inch thick plywood conforming with the specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

INTERSTATE ROUTE MARKERS

GENERAL NOTES FOR INTERSTATE ROUTE MARKERS

The alphabets and lateral spacing between letters and numerals shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets.

Colors of lettering, numerals, border and background shall be as shown on the Route Marker sign details. Reflective sheeting shall be flat surface reflective sheeting. Letters, numerals, and border shall be reverse screened.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with the Item, "Aluminum Signs Type A," or one piece 12 gage sheet steel conforming with the Item, Sheet Steel Signs Type A, when used on Ground Signs, independent mounted.

For sign blank punching details, see sheet of Sign Blank Punching Details.

GENERAL NOTES:

LOCATION of Delineators and Milepost Markers: facing on-coming traffic, two feet from edge of shoulder or two feet from face of unmountable curb or in line with guard fence where guard fence is used.

WINGED CHANNELS for Delineators and Milepost Markers shall be galvanized steel weighing two pounds per foot and shall have thirty-two 3/8" diameter holes spaced on 1" centers along the center line at the upper end.

MILEPOST numerals shall be 6" Series D white reflective with Interstate Green background reflectorized with green transparent ink on a white flat surface reflective sheeting, using the reverse screen process. Milepost marker blanks shall be 5/8" Type A, High Density plywood.

HARDWARE shall be galvanized steel, stainless steel, or aluminum; except as noted.

CONSTRUCTION: Delineator and Milepost Marker posts shall be driven, using an approved driving cap, prior to the installation of delineators or milepost markers. If rock is encountered, a 6" or larger diameter hole shall be drilled and the post set in Class A Concrete. The hole shall be drilled 3'-6" deep or to a minimum depth of 2'-0" into the rock.

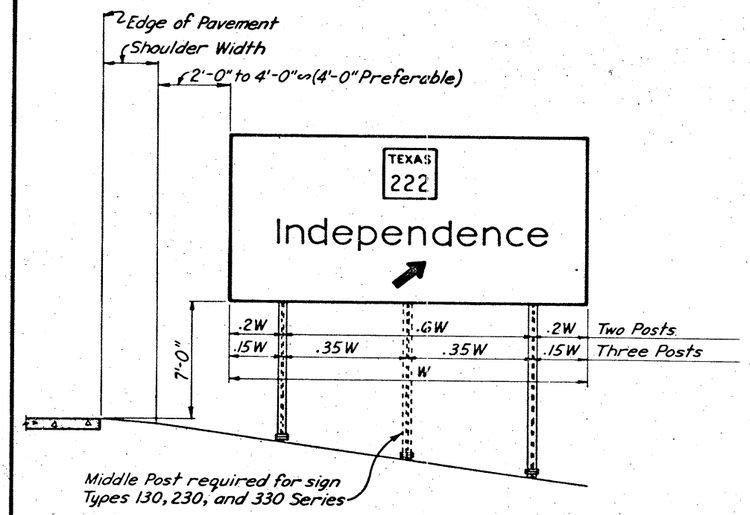
WIND BEAM TABLES

NOTE: Wind beam spacings for sign widths other than even feet: select from next longer even feet.



TYPICAL SIGN INSTALLATION AND LOCATION

NOTE:

A tolerance of plus or minus ¼ inch will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus ¼ inch will be permitted for each increment of a multi-increment sign panel where necessary to secure square, tight-fitting joints.

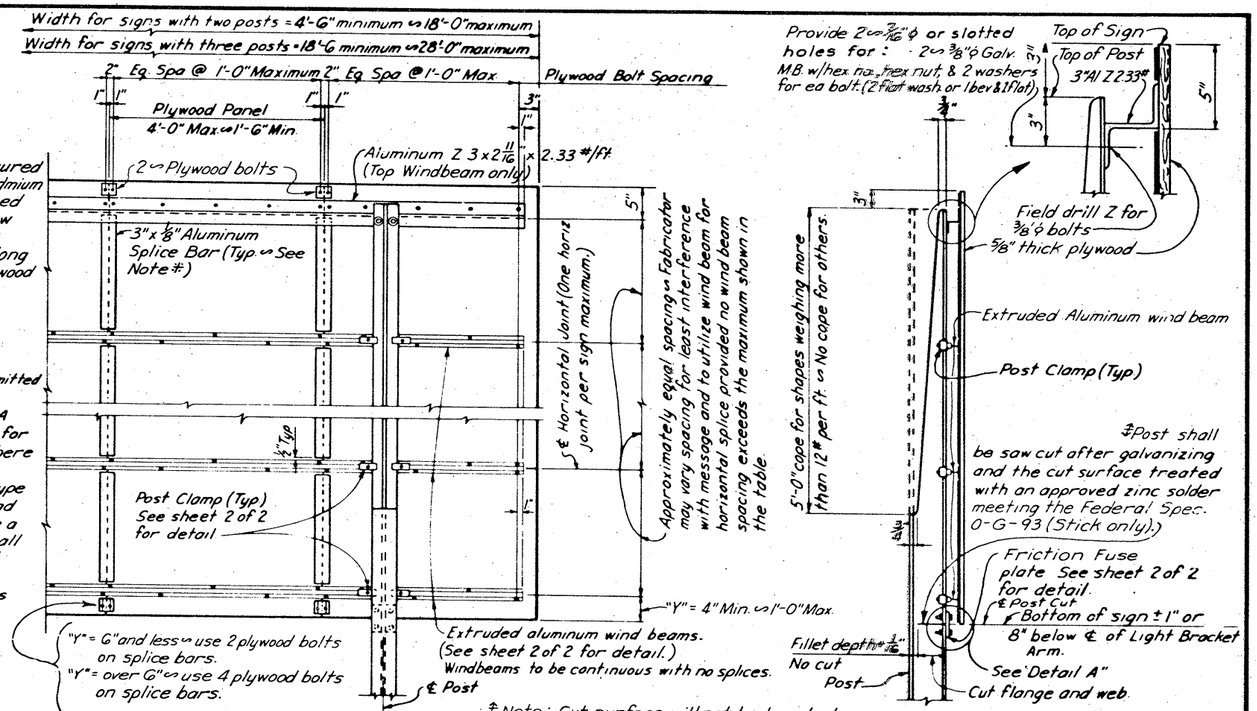
Plywood Bolts ∽ 5/16" ℄ x 1½" flat head elevator type steel bolt with ¾" minimum thread length. The head shall have a minimum diameter of ⅞" and shall have a minimum of two fins on the underside. Each bolt shall be provided with one 5/16" steel hex nut, one 5/16" steel flat washer, and one 5/16 steel lock washer. Bolts, nuts, and washers shall be hot dipped galvanized as per item 442 of Standard Specifications.

NOTE:

A tolerance of plus or minus ¼ inch will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus ¼ inch will be permitted for each increment of a multi-increment sign panel where necessary to secure square, tight-fitting joints.

Plywood Bolts ∽ 5/16" ℄ x 1½" flat head elevator type steel bolt with ¾" minimum thread length. The head shall have a minimum diameter of ⅞" and shall have a minimum of two fins on the underside. Each bolt shall be provided with one 5/16" steel hex nut, one 5/16" steel flat washer, and one 5/16 steel lock washer. Bolts, nuts, and washers shall be hot dipped galvanized as per item 442 of Standard Specifications.

NOTE: Splice bars shall be secured with 5/8" long x #10 round head, cadmium plated, brass wood screws spaced at 6" maximum along double row spacing with the exception at extreme ends of splice bars, along outside edge of sign, where plywood bolts shall be used as shown.



SIDE VIEW

REAR ELEVATION

(Showing Typical Assembly for Ground Mounted Signs)

GENERAL NOTES:

Design conforms with AASHO Specifications for the design and Construction of Structural Supports for Highway Signs.

Materials and Fabrication shall conform to the requirements of Texas Highway Department Standard Specifications and Special Specifications.

All Structural Steel shall conform to ASTM-A441. Flange holes for fuse bolts shall be drilled.

All Sheet and Plate Aluminum shall conform to ASTM-B209 alloy 6061-T6. All Extruded Aluminum shall conform to ASTM-B221 alloy 6061-T6. Cast Aluminum post clamps shall conform to ASTM-B26 alloy SG70A-T6, ASTM-B108 alloy SG70A-T6, ASTM-B26 alloy ZC81A, or ASTM-B108 alloy ZC81B.

Notched steel fuse plates shall conform to the requirements of ASTM-A441. All holes shall be drilled. All plate cuts shall preferably be saw cuts, however; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be tolerated.

All high strength bolts, nuts, and washers shall conform to ASTM-A325.

Tighten the high strength bolts in the base connection only to the torque shown in the table. DO NOT OVERTIGHTEN.

All bolts other than high strength bolts shall conform to ASTM-A307, Class A.

All structural steel, bolts, nuts, and washers shall be galvanized as per Item 442 of the Standard Specifications except as noted. Structural Steel to be galvanized after fabrication except as noted.

FABRICATOR NOTE: **IMPORTANT** - All friction fuse bolts shall be tightened in the shop following a method approved by the Engineer. Tightening shall be to such a degree as to obtain the following minimum residual tension in each bolt:

Bolt Size	Min. Residual Bolt Tension
½" ℄	12050 Lbs.
5/8" ℄	19200 Lbs.
¾" ℄	28400 Lbs.
⅞" ℄	39050 Lbs.

SIGN POST AND STUB POST ELEVATION

(For 4I7.7 and 3I5.7 Shapes)

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen each bolt in turn and retighten in a systematic order to the presribed torque. (See Table)
4. Burr threads at junction with nut using a center punch to prevent nut loosening.

POST WEIGHT DATA

Furnish 2 ea .012"± thick and 2 ea .032"± thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to A.S.T.M. - B36.

SHIM DETAIL

GENERAL NOTES:

Design conforms with AASHO Specifications for the design and Construction of Structural Supports for Highway Signs.

Materials and Fabrication shall conform to the requirements of Texas Highway Department Standard Specifications and Special Specifications.

All high strength bolts, nuts, and washers shall conform to ASTM-A325.

Notched steel fuse plates shall conform to the requirements of ASTM-A441. All holes shall be drilled. All plate cuts shall preferably be saw cuts, however; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be tolerated.

Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.

All bolts other than high strength bolts shall conform to ASTM-A307, Class A.

All structural steel, bolts, nuts, and washers shall be galvanized as per Item 442 of the Standard Specifications. Struct steel to be galv. after fabrication except as noted.

See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.

Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

Structural steel shall conform with the requirements of ASTM Specification A441.

Galvanizing of all posts shall be projection above concrete plus 6" minimum.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen each bolt in turn and retighten bolts in a systematic order to the prescribed torque. (See Table)
4. Burr threads at junction with nut using a center punch to prevent nut loosening.

FRONTAGE ROAD PIPE MOUNTS

TYPES A & A-2

TYPE A - This type pipe mount to be used when one Route Marker is required, for IR-1A, IR-1G signs and other sign areas not exceeding 8 square feet.

TYPE A-2 - This type pipe mount to be used for any sign or combination of signs not exceeding a total of 4 square feet in area.

MAIN LANE & FRONTAGE ROAD PIPE MOUNT

TYPE A-1

This type pipe mount to be used for a 36" Interstate Route Marker with a 24" Route Marker on Main Lanes or as a specified optional substitute for Type B.

FRONTAGE ROAD PIPE MOUNT

TYPE B

This type pipe mount to be used when 2 Route Markers of the same type or 2 Route Markers of different types are required.

FRONTAGE ROAD PIPE MOUNT

TYPE C

This type pipe mount to be used when 3 Route Markers are required.

MAIN LANE PIPE MOUNT

TYPE C-1

This type pipe mount to be used for a 36" Interstate Route Marker with two 24" Route Markers.

FRONTAGE ROAD PIPE MOUNT

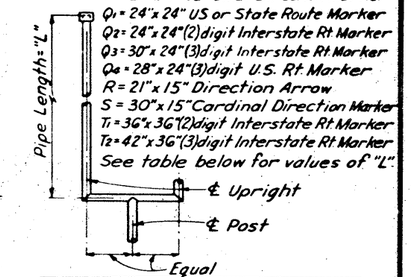
TYPE D

This type pipe mount to be used when 4 Route Markers are required.

MAIN LANE PIPE MOUNT

TYPE D-1

This type pipe mount to be used for a 36" Interstate Route Marker with three 24" Route Markers.



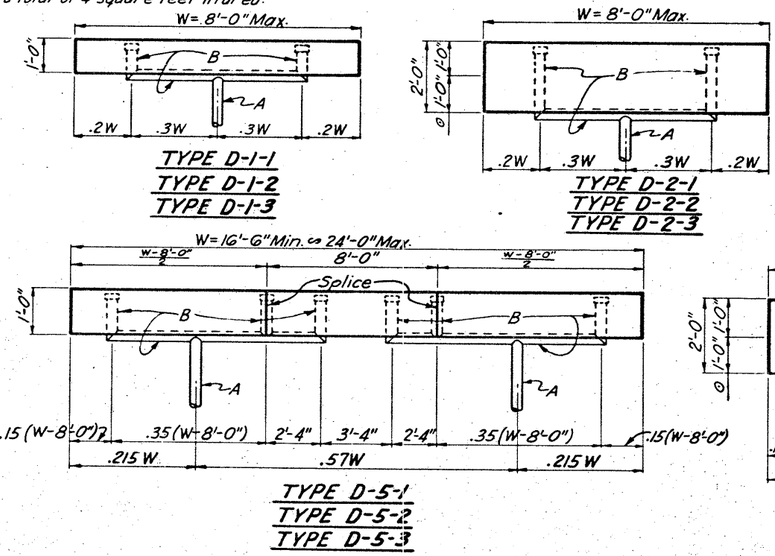
MARKER COMBINATIONS	"L"
2P + 2Q + 2R + 7"	8'-7"
P + 2Q + 2R + 7"	7'-10"
2Q + 2R + 7"	7'-1"
Q + R + 3"	3'-6"
S + T + 3"	4'-6"
P + Q + R + 3"	4'-3"
P + Q + S + T + 7"	7'-7"

DIMENSION "S"

"S" = 1'-4½" for Q_1 or Q_2
"S" = 1'-7½" for Q_3
"S" = 1'-6½" for Q_4
"S" = 1'-10½" for T_1
"S" = 2'-1½" for T_2

Dimension "S" equals the distance from the ℄ of Upright to the ℄ of clearance between sign group.

TYPE OF MOUNT	PIPE A	PIPE B	FOUNDATION Footing Dia.	FOUNDATION Footing Depth
D-1-1	3"ϕ	2"ϕ	1'-0"	4'-6"
D-1-2	2½"ϕ	1½"ϕ	1'-0"	4'-6"
D-1-3	2"ϕ	1½"ϕ	1'-0"	4'-6"
D-2-1	4"ϕ	3"ϕ	1'-6"	5'-6"
D-2-2	3½"ϕ	2½"ϕ	1'-6"	4'-6"
D-2-3	3"ϕ	2"ϕ	1'-6"	4'-6"
D-3-1	4"ϕ	3"ϕ	1'-6"	5'-6"
D-3-2	3½"ϕ	2½"ϕ	1'-6"	4'-6"
D-3-3	3"ϕ	2"ϕ	1'-6"	4'-6"
D-4-1	5"ϕ	3"ϕ	1'-6"	5'-6"
D-4-2	4"ϕ	3"ϕ	1'-6"	5'-6"
D-4-3	3½"ϕ	2½"ϕ	1'-6"	4'-6"
D-5-1	3½"ϕ	2½"ϕ	1'-6"	4'-6"
D-5-2	3"ϕ	2"ϕ	1'-6"	4'-6"
D-5-3	2½"ϕ	1½"ϕ	1'-6"	4'-6"
D-6-1	4"ϕ	3"ϕ	1'-6"	5'-6"
D-6-2	3½"ϕ	2½"ϕ	1'-6"	4'-6"
D-6-3	3"ϕ	2"ϕ	1'-6"	4'-6"

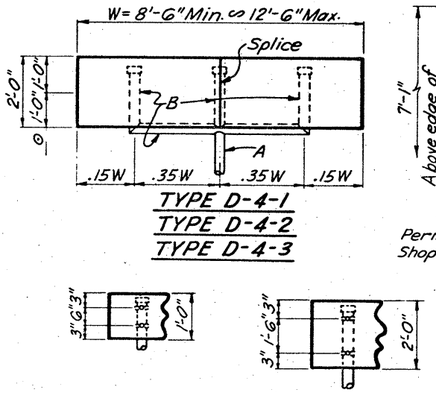


NOTE: (For Types D-1-1, 2 & 3 thru D-6-1, 2 & 3)

The last number in Type designation denotes zone for which structure is to be used.

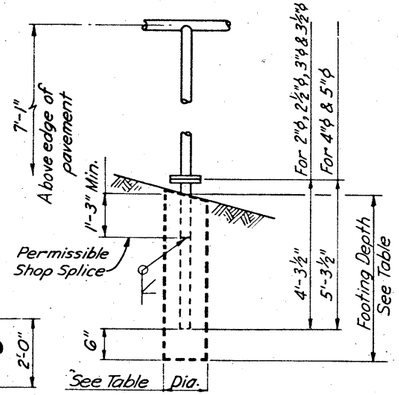
Plywood shall be ⅜" thick.

Ø Double destination DI-A signs for mount types D-2-1, D-2-2, D-2-3, D-4-1, D-4-2, D-4-3, D-6-1, D-6-2 & D-6-3 shall be combined on a single panel without a horizontal joint.



MUFFLER CLAMP LOCATION

(For clamp detail see sheet SMD-3)



FOUNDATION DETAIL

(Non-reinforced)

FOR TYPES D-1-1 THRU D-6-3

NOTE:

DI-A signs with a vertical dimension of 11½" in compliance with the Texas Highway Department Manual on Traffic Sign Design Standards may be used in lieu of DI-A signs having a vertical dimension of 12" as shown on the plans, where a sign manufacturer has screens already made for the 11½" vertical dimension but not for the 12" vertical dimension. Measurement for payment, however, shall be made on the basis of the dimensions for the signs as actually erected.

WELDED PIPE MOUNT DETAILS

NOTE:
The Contractor, at his option may furnish Standard Weight pipe conforming to A.S.T.M. Specification A-53, or Standard Weight pipe conforming to API5L, Grade B. Pipe made from materials conforming to the API5L Specifications shall meet all requirements of those specifications except that the Official API Monogram identification is not required.

Combinations of pipe material meeting different specifications may be used in the same project.

The pipe may be welded or seamless.

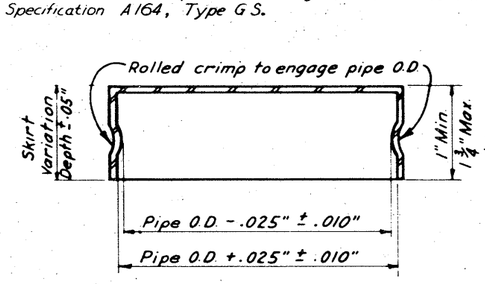
Hydrostatic tests are not required.

NOTES:
FRICTION CAPS— Caps may be manufactured from either hot rolled or cold rolled steel sheets. For pipe sizes 3½" and smaller the minimum sheet metal thickness shall be 24 gauge.

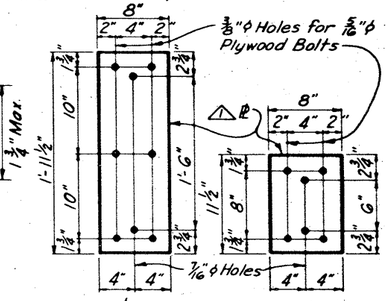
The rim edges shall be reasonably straight and smooth.

Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.

Caps shall have an electrodeposited coating of zinc in accordance with the requirements of A.S.T.M. Specification A164, Type G S.



FRICTION CAP DETAIL



⚠ May be ⅛"(A.S.T.M.-A36) steel Pl or 0.187" aluminum plate.

SPLICE Pls

GENERAL NOTES:
Design conforms with A.A.S.H.O. Specifications For The Design And Construction Of Structural Supports For Highway Signs.

Material and fabrication shall conform to the requirements of Texas Highway Department Standard Specifications.

Aluminum splice plates shall conform with the requirements of A.S.T.M.-B-209 alloy 6061-T6, or A.S.T.M.-B-221 alloy 6061-T6.

All structural steel, bolts, nuts and washers shall be galvanized as per Item 442 of the Standard Specifications except as noted. Galvanizing of all posts shall be projection above concrete plus 6" minimum.

All high strength bolts and washers shall conform to A.S.T.M.-A325. All high strength nuts shall be of such capacity as to develope the bolt strength.

Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.

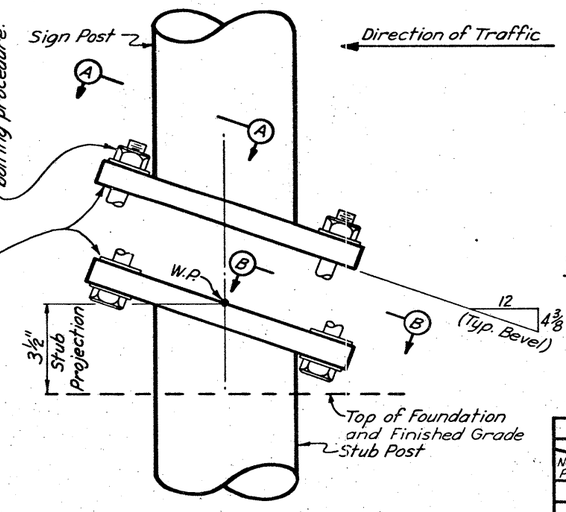
All bolts other than high strength bolts shall conform to A.S.T.M.-A307, Class A.

See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.

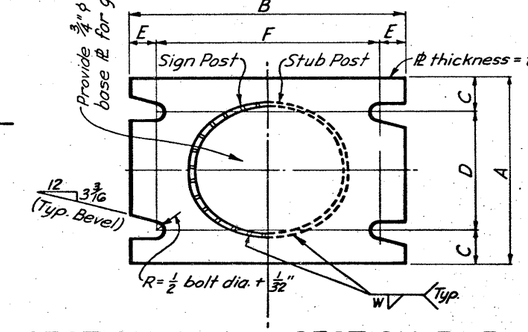
Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

H.S. bolt with hex. hd., hex nut & 3 washers with each bolt. See table for bolt diameter and torque. See bolting procedure.

Remove all galvanizing runs or beads in washer area



SIGN POST AND STUB POST ELEVATION



SECTION A-A SECTION B-B

(See Table for Dimensions)

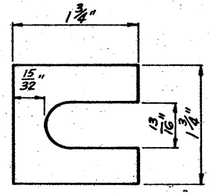
Nom. Pipe Size \ Dimension	Bolt Size & Torque	A	B	C	D	E	F	t	W
2"ϕ	½"ϕ x 2" Torque=200'#	4½"	6¼"	1"	2½"	¾"	4¾"	½"	¼"
2½"ϕ		4½"	6¼"	1"	2½"	¾"	4¾"	½"	5/16"
3"ϕ	½"ϕ x 2½" Torque=200'#	4½"	7"	1"	2½"	¾"	5½"	⅝"	5/16"
3½"ϕ		5½"	7¾"	1"	3½"	¾"	6¼"	⅝"	⅜"
4"ϕ		5½"	7¾"	1"	3½"	¾"	6¼"	⅝"	⅜"
5"ϕ	⅝"ϕ x 2¾" Torque=450'#	6½"	9¾"	1⅛"	4"	⅞"	8"	1"	7/16"

*Plates for base connection shall conform with the requirements of A.S.T.M. A36. Payment will be included in price bid per linear foot of pipe.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen.
4. Retighten bolts in a systematic order to the prescribed torque.(See Table)
5. Loosen each bolt and retighten to prescribed torque in the same order as initial retightening.
6. Burr threads at junction with nut using a center punch to prevent nut loosening.



Furnish 2 ea .012"± thick and 2 ea .032"± thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to A.S.T.M.-B36.

~~To be~~ Used Approx. 93 Stations

~~PROPOSED~~ WEST FRONTAGE ROAD SECTIONS

DESIGN NOTE:

The design criteria for the pavement, base and sub-base, ~~as proposed~~, requires certain minimum triaxial values for each layer to provide the design load capacity. The addition of lime to the flexible base, to the roadbed treatment, and to the subgrade is required to insure that each layer will have the desired support value as indicated by preliminary triaxial tests, P.I. tests and under known field conditions as observed in other previously completed projects.

DETAIL OF CONCRETE MEDIAN

DROP INLET GENERAL NOTES

All concrete shall be Class 'A'. Chamfer all exposed corners ¾". All concrete surfaces exposed to view after backfilling shall receive a 'Type 1' surface finish. Concrete Pipe shall be reinforced concrete pipe of the class specified.

Payment for DROP INLETS shall be in accordance with Item "Inlet (Compl)". Payment for GRATES shall be in accordance with Item 471, "Frames, Grates, Rings & Covers." EXCAVATION for Drop Inlets shall be paid for in accordance with Item 400, "Unclassified Structural Excavation."

For installation on box culverts, adjustments may be made by the Engineer to fit unusual conditions.

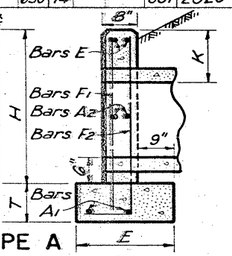
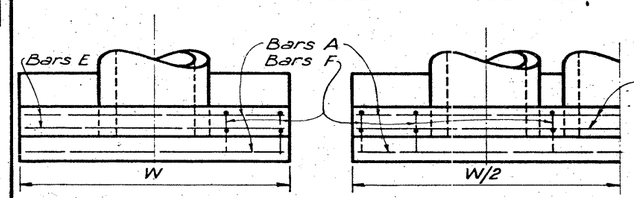
ELEVATION TYPE A

ELEVATION MULTIPLE TYPE A

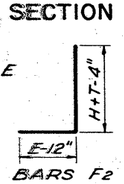


℄ SECTION



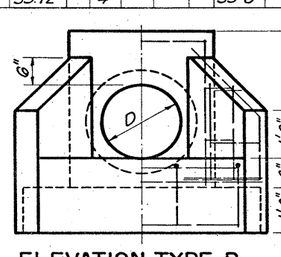
PLAN TYPE A

PLAN MULTIPLE TYPE A

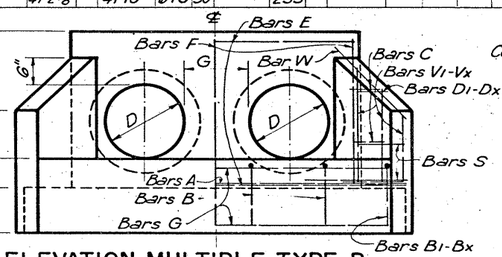


BARS F2

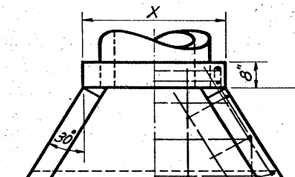
*Concrete Quantities increase slightly for metal pipe installations.



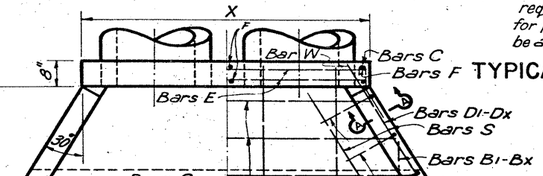
ELEVATION TYPE B



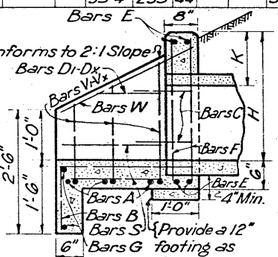
ELEVATION MULTIPLE TYPE B



PLAN TYPE B

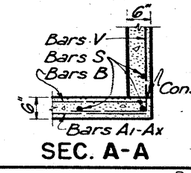


PLAN MULTIPLE TYPE B



required to maintain 4" Min. cover for pipes. Concrete for footing shall be added to Total Quantities shown.

TYPICAL WING ELEVATION



SEC. A-A

$A_1 = W + 4\frac{1}{2}"$
$A_2 = W - 9\frac{3}{8}"$

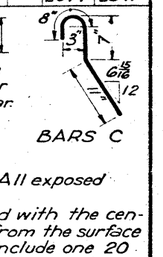
This dimension reduced 1'-1⅛" for each successive bar.

BARS A1-Ax

$B = Y + 4"$
$B_1 = 8"$

This dimension increased 2'-7" for each successive bar.

BARS B & B1-Bx



BARS C

GENERAL NOTES :-

All concrete shall be Class A. All exposed corners shall be chamfered ¾".

Reinforcing steel shall be placed with the center of the outside layer of bars 2" from the surface of the concrete. Total Quantities include one 20 diameter lap for all bars over 60'-0" in length.

GENERAL NOTES:-
DESIGN:- Wing Walls designed in accordance with Rankine's theory of retaining wall design. Elements of design are shown on sketch at right.
All concrete shall be Class A.
Chamfer all exposed corners 3/4" unless specified otherwise.
All dimensions relating to reinforcing steel are to centers of bars.
Toe walls for culvert and wing walls shall be omitted when structure is founded on solid rock.

GENERAL NOTES:-

DESIGN: Wing Walls designed in accordance with Rankine's theory of retaining wall design. Elements of design shown on sketch above.

All concrete shall be Class A. Chamfer all exposed corners ¾" unless specified otherwise.

All dimensions relating to reinforcing steel are to centers of bars.

Toewalls for culverts and wingwalls shall be omitted when structure is founded on solid rock.

PLAN SHOWING TYPICAL REINFORCING FOR CULVERT TOEWALLS

Use toewall length of Bar Y. Include One 20 diameter lap for bars in excess of 40'.

GENERAL NOTES:

All concrete shall be Class "A" Chamfer all exposed corners ¾" unless specified otherwise.

All dimensions relating to reinforcing steel are to centers of bars.

Toe walls for culverts and wingwalls shall be omitted when founded on solid rock.

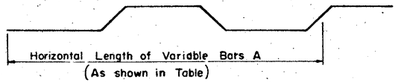
LENGTH F BARS
F1, F3 & F4 = 46'-7"
F5 = 46'-5"

F4 replace F2 in ext. wall
F5 replace F2 in int. wall



BARS A

For ease of fabrication, it is pointed out that variable length A Bars may be fabricated full length and cut off. The cut off portions can then be used for the other end of the skewed portion with a very slight amount of waste.

GENERAL NOTES:

The necessary details for adapting normal MULTIPLE BOX CULVERT Standards, MC-5-1 through MC-10-3, to 15° Skew Culverts are shown on these sheets. Refer to the appropriate normal Standard for details, dimensions, sections, notes and bar diagrams not shown hereon.

Quantities shown hereon are for 44'-0" Clear Width between headwalls measured perpendicular to the center line. Quantities of reinforcing steel are approximate. Quantities P.L.F. Barrel shown on normal MC Standards may be converted to P.L.F. Clear Width by Multiplying by 1.0353.

The number of variable length bars required: Bars A = 2X, Bars B = 4Y, Bars B_1 = 2Y, and Bars B_2 = 2Z.

Size of Bars H: #4 for Spans = 5'-7', #5 for Spans = 8'-10'.

PVT. BRKT. QUANTITIES

2 - PVT. BRACKETS 24'-0" LONG	
CONCRETE	STEEL
Cu. Yd.	Lb
1.19	264

GENERAL NOTES :-

Design Loading: H20- or H20 S16- in accordance with A.A.S.H.O. 1957 Standard Specifications.

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls.

CONSTRUCTION JOINT SHOWN AT THE FLOW LINE MAY BE RAISED A MAXIMUM OF 6" AT THE CONTRACTOR'S OPTION. BARS M MAY BE CUT OFF OR RAISED. BARS C & D MAY BE REVERSED (D ON TOP) AND BARS Y & Z MAY BE REVERSED (Y ON TOP).

GENERAL NOTES :-

Design Loading : H-20- or H20S16- in accordance with A.A.S.H.O. 1957 Standard Specifications

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls.

CONSTRUCTION JOINT SHOWN AT THE FLOW LINE MAY BE RAISED A MAXIMUM OF 6" AT THE CONTRACTOR'S OPTION. BARS M MAY BE CUT OFF OR RAISED. BARS C & D MAY BE REVERSED (D ON TOP) AND BARS Y & Z MAY BE REVERSED (Y ON TOP).

* These quantities do not include toe walls, paving bracket or wings.

GENERAL NOTES:

Design Loading: H20- or H20 S16- in accordance with A.A.S.H.O. 1957 Standard Specifications

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls.

CONSTRUCTION JOINT SHOWN AT THE FLOW LINE MAY BE RAISED A MAXIMUM OF 6" AT THE CONTRACTOR'S OPTION. BARS M MAY BE CUT OFF OR RAISED, BARS C & D MAY BE REVERSED (D ON TOP) AND BARS Y & Z MAY BE REVERSED (Y ON TOP).

GENERAL NOTES :-

Design Loading : H20- or H20S16- in accordance with A.A.S.H.O. 1957 Standard Specifications

All concrete shall be Class A. Chamfer exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Quantities of reinforcing steel shown hereon are for 44'-0" clear width between headwalls and include one 20 diameter lap for all bars exceeding 60 feet in length.

CONSTRUCTION JOINT SHOWN AT THE FLOW LINE MAY BE RAISED A MAXIMUM OF 6" AT THE CONTRACTOR'S OPTION. BARS H MAY BE CUT OFF OR RAISED, BARS C & D MAY BE REVERSED (D ON TOP) AND BARS Y & Z MAY BE REVERSED (Y ON TOP).

GENERAL NOTES

1. SEE SPECIFICATIONS FOR MATERIAL REQUIREMENTS AND CONSTRUCTION METHODS.
2. SPECIAL FABRICATION WILL BE REQUIRED IN INSTALLATIONS HAVING A CURVATURE OF LESS THAN 150' RADIUS.
3. SECTIONS OF COMPARABLE STRENGTH MAY BE SUBSTITUTED IF APPROVED BY THE ENGINEER.
4. POST SPACING OF 6'-3" MAY BE USED AT HAZARDOUS LOCATIONS AS INDICATED ELSEWHERE ON THE PLANS.
5. EXCEPT WHERE USED AT STRUCTURES OR UNDERPASSES THAT ARE NARROWER THAN CROWN WIDTH, OR WHERE OTHERWISE INDICATED ON THE PLANS, THE GUARD FENCE SHALL BE LOCATED A MINIMUM OF ONE FOOT OUTSIDE THE SHOULDER SURFACE.
6. AT THE OPTION OF THE CONTRACTOR, THE RAIL ELEMENT FOR THE GUARD FENCE MAY BE FURNISHED IN 25 FOOT LENGTHS WITH POST BOLT SLOTS FOR 5/8" DIAMETER BOLT ANCHORAGE TO INTERMEDIATE POSTS.
7. BOLTS USED IN ATTACHING RAIL TO POST SHALL BE OF SUFFICIENT LENGTH TO EXTEND THROUGH THE FULL THICKNESS OF THE NUT AND NO MORE THAN 3/4" BEYOND IT. RECTANGULAR WASHERS, AS INDICATED, SHALL BE USED.
8. ALL STEEL FITTINGS SHALL BE GALVANIZED.
9. IF ALUMINUM RAIL ELEMENTS ARE FURNISHED, A 1-1/2" ϕ x 1/8" ELASTOMETRIC WASHER SHALL BE PROVIDED BETWEEN THE POST AND ALUMINUM MEMBER. THE RECTANGULAR WASHER SHALL BE AN ALUMINUM ALLOY.
10. WHERE SHOWN ON THE PLANS, STEEL LINE POSTS SHALL BE SET IN CONCRETE AS DIRECTED BY THE ENGINEER.
11. WHEN GUARD FENCE IS USED, FINISH CROWN WIDTH WILL BE WIDENED TO ACCOMMODATE GUARD FENCE.

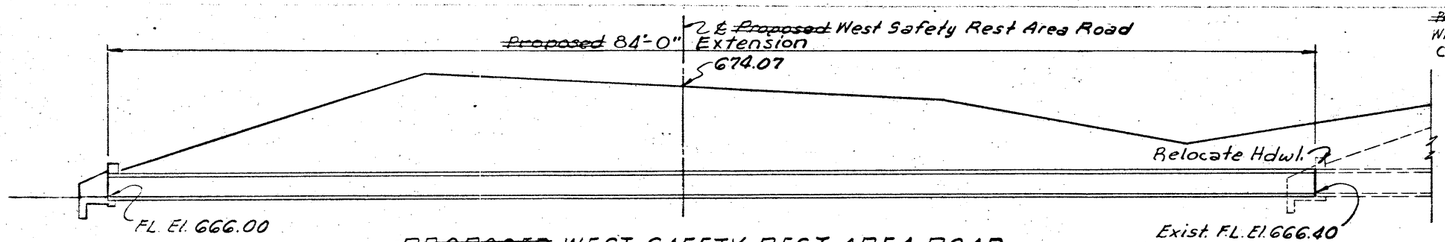
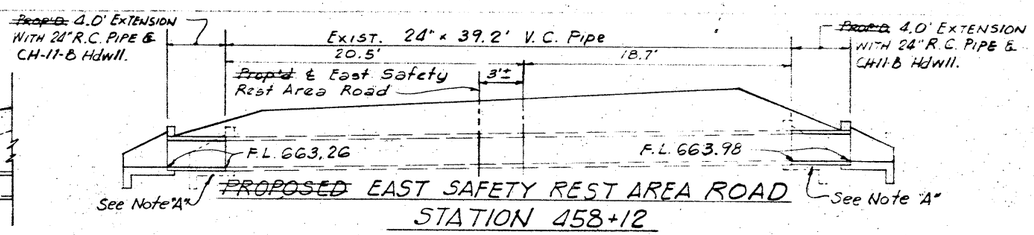
LAYOUT OF
CLEARING & GRUBBING
SAFETY REST AREAS

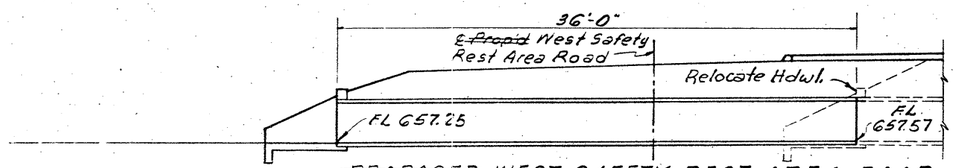
I-35-1(108)007 115
21 WEBB 18 5 16 1H-2



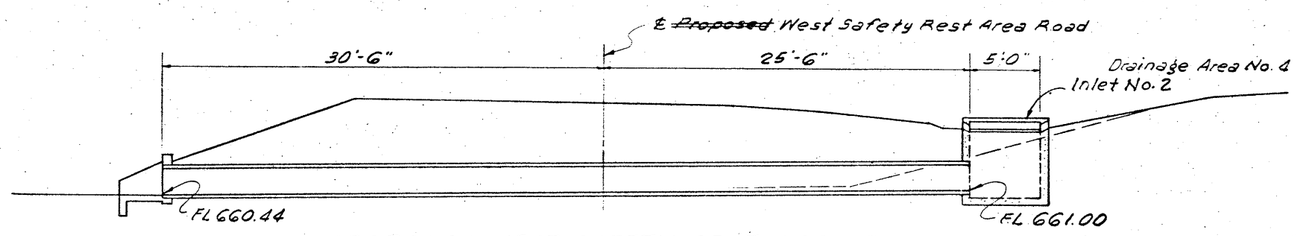
PROPOSED WEST SAFETY REST AREA ROAD
STATION 459+50
Exist. 18" R.C.P. with CH-11-B Headwalls
Ext. 84' Left with one 18" R.C.P. (Cl. III) and
Relocate one CH-11-B Headwall



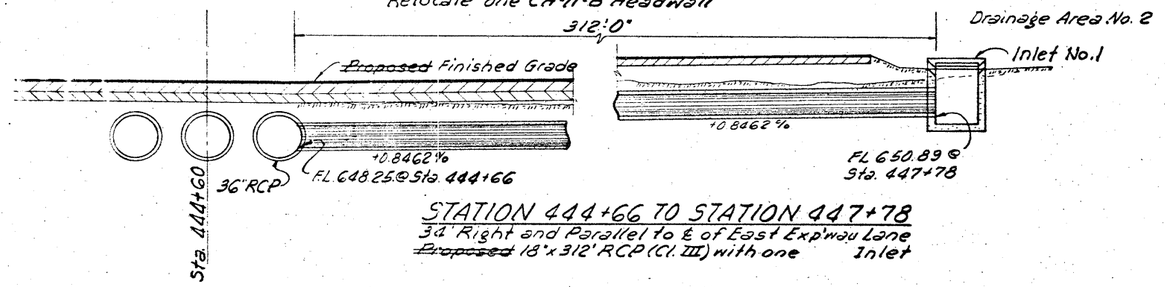
PROPOSED EAST SAFETY REST AREA ROAD
STATION 458+12
Exist. 24" x 39.2' V.C. Pipe with Conc. Hdwlls
Ext. 4.0' LT. & RT. WITH 24" R.C.P. (CL. III) AND
CH-11-B HEADWALLS



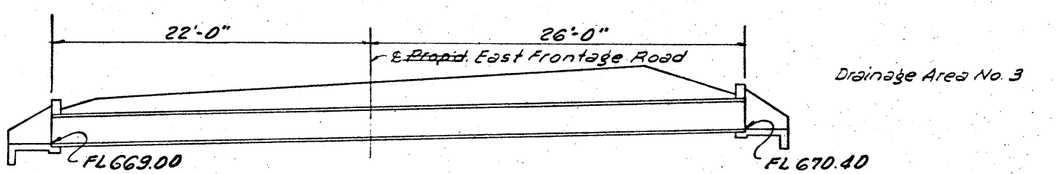
PROPOSED WEST SAFETY REST AREA ROAD
STATION 455+98
Exist. 36" x 126' RCP with CH-11-B Headwalls
Ext. 36' Left with 36" RCP (Cl. III) and
Relocate one CH-11-B Headwall



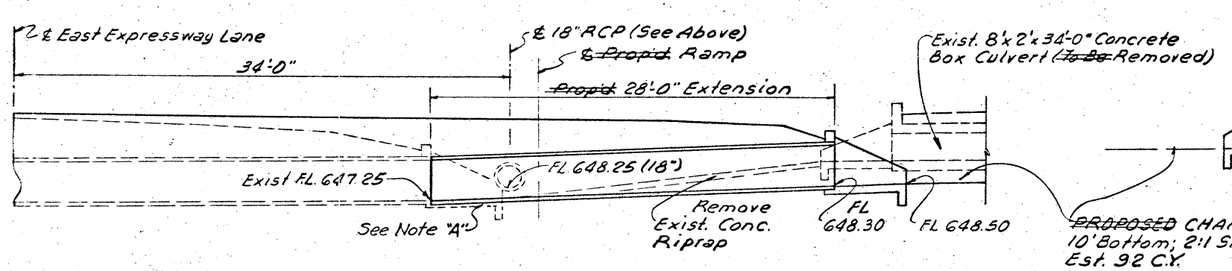
PROPOSED WEST SAFETY REST AREA ROAD
STATION 457+90
Propd 24" x 56' R.C.P (Cl. III) with one CH-11-B Headwall
and one Inlet.



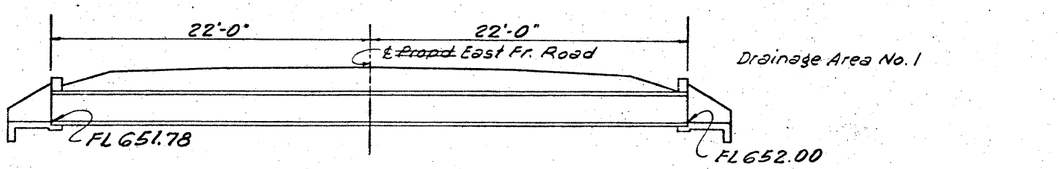
STATION 444+66 TO STATION 447+78
34' Right and Parallel to ℄ of East Exp'way Lane
Proposed 18" x 312' RCP (Cl. III) with one Inlet



PROPOSED EAST FRONTAGE ROAD
STATION 460+00
Propd. 24" x 48' RCP (Cl. III)
with CH-11-B Headwalls



PROPOSED RAMP
STATION 444+60
Exist. 3-36" x 124' RCP with CH-11-B Headwalls
Ext. 28'-0" Right with 3-36" RCP (Cl. III) and
one CH-11-B Headwall



PROPOSED EAST FRONTAGE ROAD
STATION 444+85
Propd. 3-24" x 44' RCP (Cl III) with
CH-11-B Headwalls

3087 9

Note "A": Remove portion of Headwall necessary to make connection for extending structures.

FINAL PLANS

TRAFFIC DETOURS, BARRICADES, ETC.
See General Notes and Item 7 of the Standard Specifications.
TYPE III (C) Barricades with signs G20-1, G20-2, G20-6, R10-8 and CW20-1D shall be erected at each end of the Project.
TYPE I Barricades with signs CW20-1D and CW13-4 shall be erected at entrance ramps. Additional barricades and signs shall be used to direct traffic and protect the work in the immediate vicinity of operations as directed by the Engineer.
TYPE III (C) Barricades may consist of one panel on each side of pavement where the right of way width is too narrow to allow placing of two panels.

SPECIFICATIONS ADOPTED BY THE STATE HIGHWAY DEPARTMENT OF TEXAS JANUARY 3, 1972, AND SPECIFICATION ITEMS LISTED AND DATED AS FOLLOWS SHALL GOVERN ON THIS PROJECT: REQUIRED CONTRACT PROVISIONS, ALL FEDERAL - AID CONSTRUCTION CONTRACTS (FROM PR-1273, SEPTEMBER, 1975).

SHEET 11 OF 11 SHEETS 11-A

FED. RY. DIV. NO.	STATE	FEDERAL PROJECT NO.	SHEET NO.
6	TEXAS	I-35-1(30) 002	11A
STATE DIST. NO.	COUNTY	CONT. / SECT. / JOB / HIGHWAY NO.	
21	WEBB	18 / 6/5 / 68 / 85 / IH 35	
		18 / 4/3 / 53 / 73 / EXPWY	

GENERAL NOTES AND SPECIFICATION DATA:

The Engineer will stake all sign locations, and no changes in these locations shall be made without prior approval of the Engineer. It is the intent of the plans to erect all major signs 30' and minor signs 18' from the edge of pavement. In places where these minimum distances cannot be obtained because of the frontage road, clearances will be maintained as close to these minimums as practical and still kept a minimum distance of 8' from the edge of the frontage road.

Strict adherence to the dimensions shown on the Sign Support Detail sheets will not excuse the Contractor from the responsibility of checking dimensions Any detail which conflicts with the Standard Plan Sheets should be brought to the attention of the Engineer prior to construction unless a note is placed adjacent to the detail to indicate an intentional deviation from the Standard Plan Sheets.

ITEM 416: State Department of Highways and Public Transportation penetrometer values used for estimating length of drilled shafts were 10 and 15 blows per foot for sign structures located on regular and high fill sections respectively, unless otherwise noted on plans. The Contractor shall probe before drilling foundations to determine the location of all utilities and structures. He shall be paid for drilling shaft once only regardless of any extra work caused by the occurence of these obstructions.

All excess excavation shall be spread uniformly inside the right of way as directed by the Engineer and shall be included in the price bid for these items.

ITEM 446: All paints purchased from the Department will be charged to the Contractor as prices in accordance with the following Paint Price List:

Stock No.	Type of Paint	Price per 5 Gallons
3020000	#702 Aluminum Finish Coat (Slow Dry)	$26.80
Stock No.		
Stock No.	Type of Paint	Price per Gallon
3051600	WES-2 White Enamel, Sign	$5.25
3057500	YES-2 Yellow Enamel, Sign	7.40
3038500	GES-2 Green Enamel, Sign	7.90
3024700	BES-2 Blue Enamel, Sign	8.60
3025000	BPE-1 Black Exterior	6.60
3046040	OES-2 Orange Enamel, Sign	5.30

ITEMS 704 & 7223: Completed sign blanks and panels shall be handled and stored at the job site in such a manner that corners, edges and faces are not damaged. Finished sign blanks shall be stored in either a weather-proof warehouse or outside and off the ground in a vertical position. All paper, cardboard and chemically treated separators and packaging shall be removed prior to outside storage. All guide signs number panels and exit sign number panels to be installed are of standard size and a field review of existing roadside guide signs should be made to determine required material and hardware for attaching and mounting the panels to existing guide signs. All material removed by the Contractor to be reused shall be handled and stored in such a manner to insure no damage and salvable material not be reused shall become property of the State Maintenance Forces. Mounting height and horizontal clearance requirements for the installation of regulatory, warning and route marker assembly signing on frontage roads, ramps or behind guardrail are shown in the 1971 AASHO Manual on Uniform Traffic Control Devices. Existing sign post without signs and existing or new sign foundation stubs when left without signs and posts installed overnight shall be protected by the Contractor with flashing electric lights.

ITEM 724: Dimensions for corner radii above 3" may vary plus or minus 1" Dimensions for border width may vary as much as plus 1/2". Borders and corner radii must be of matching widths.

Border widths and radii for all signs shall be as follows:

Sign Area (S.F.)	Border Width	Radii
0-60	1 1/2"	6"
60-96	2"	9"
Above 96	3"	12"

Wind Design Velocity - 67 M.P.H.

Use Zone 3 Table on SMD (8 W1)

ITEM 5134: The square footage requirements in this Special Specification are not applicable to this project.

ITEM 7150: Existing sign supports designated in the plans for reuse including the necessary hardware for erection shall be included in this Item.

ITEMS 704 & 7223: The Contractor's attention is directed to the fact that the hole punching details shown on the SMD sheets may not be correct for signs which are to be placed on existing mounts. For these signs it may be necessary to modify or change the hole punching details in order to fit the existing mounts. These details shall be approved by the Engineer prior to placement of the sign blanks.

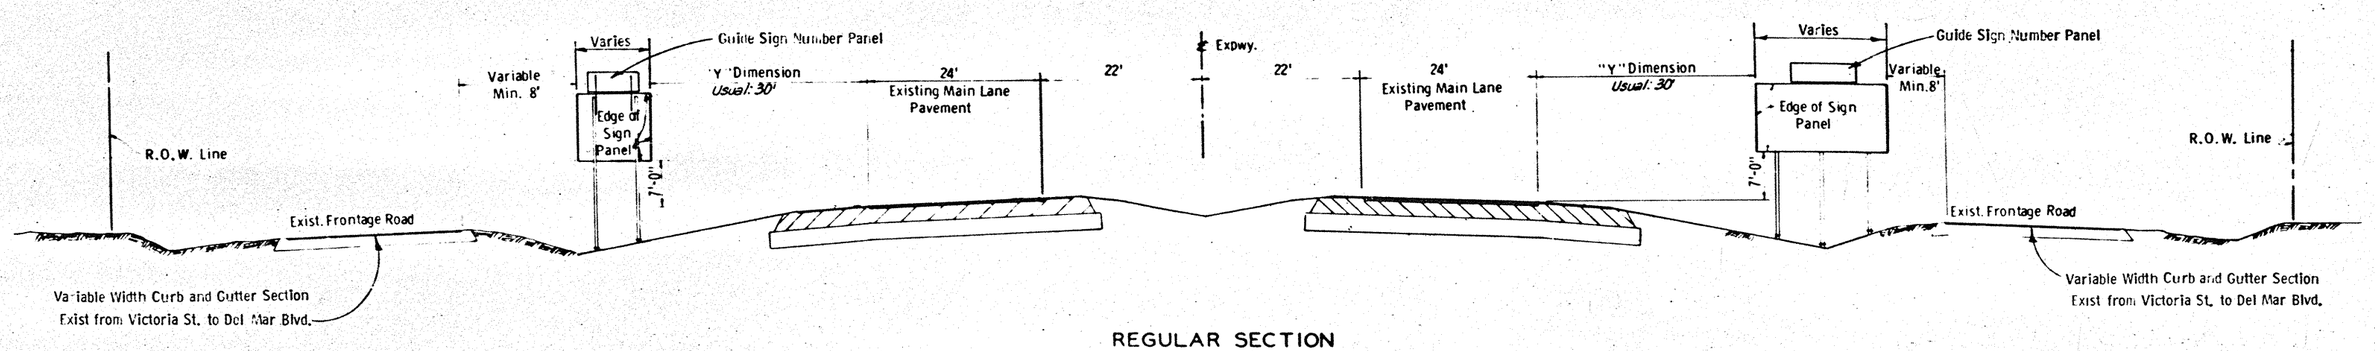
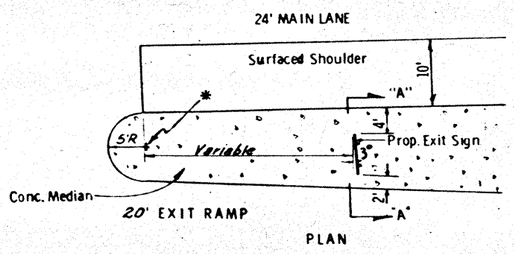
HIGH FILL SECTION

NOTE: See Standard Sheets SMD (1-1), SMD (1-2) and SMD (2) on mounting height and horizontal clearance for small roadway signs and large regulatory sign mounting. Signs installed at a "Y" Dimension of less than 14'-0" such as those behind guard rail, on ramps or on the frontage roads are to be installed with mounting height and horizontal clearance requirements as set forth in the 1971 AASHO Manual on Uniform Traffic Control Devices.

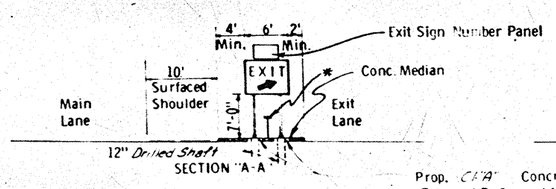


REGULAR SECTION



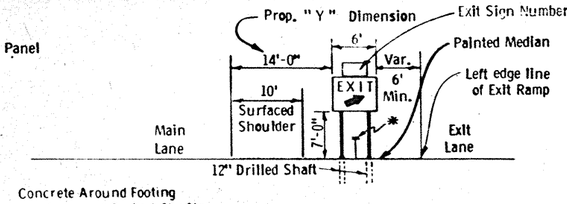
PLAN

Exit Gore Signs of 9'-0" width are to be installed by the contractor at Sta. 46+90 Rt. and 65+50 Lt. with the same 14'-0" "Y" Dimension and ramp clearance as shown below.
Painted edge lines installed by State Maint. Forces are to be installed as required by the Manual on Uniform Traffic Control Devices.
* Type III Clearance Markers at Gore points are to be modified by State Maint. Forces to Type IV Object Markers

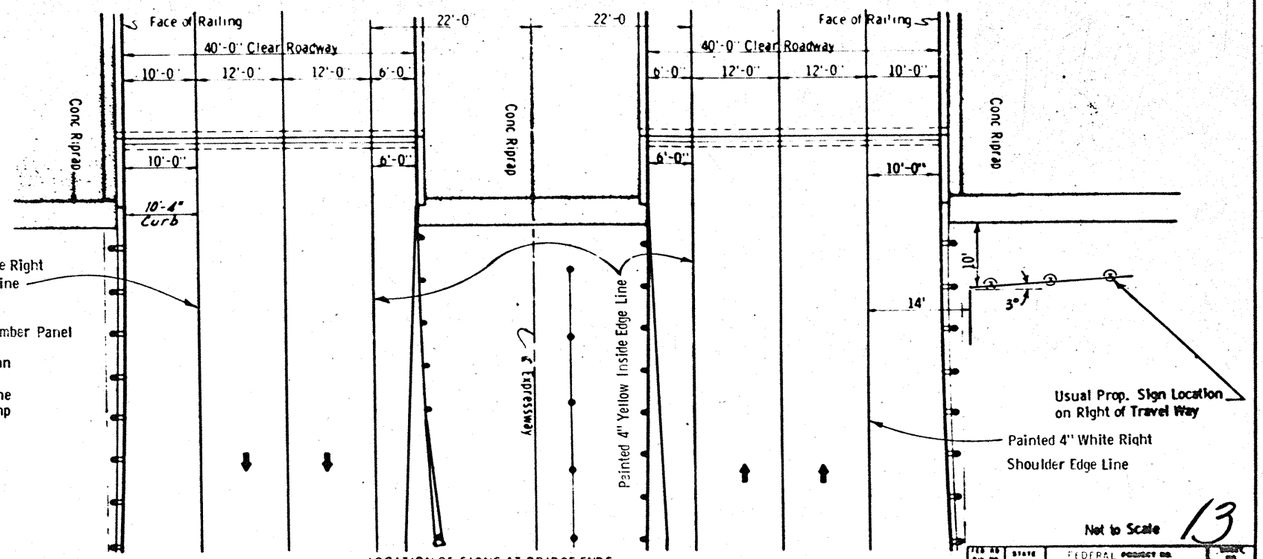


TYPICAL EXIT SIGN LOCATION ON CONCRETE GORE

Prop. "A" Concrete Around Footing
Required To Finish Median at Drilled Shafts Will Not Be Paid For Directly But Will Be Considered Subsidiary To The Various Bid Items of This Project.



TYPICAL EXIT SIGN LOCATION AT PAINTED GORE



LOCATION OF SIGNS AT BRIDGE ENDS

The background of Interstate Guide Signs shall be of interstate green flat surface reflective sheeting and all legend and borders shall be reflectorized removable copy with white frames conforming with the specifications. See Standard Sheets IE (1), IM (1) and IM (2) for additional details. ⓐ - Sign Background to be blue for Hospital, Tourist Bureau and Rest Area Signs.

A field review of existing roadside guide signs is recommended to determine required material and hardware for attaching and mounting Number Panels to existing guide signs constructed with horizontal 31-2.59 aluminum wind beams. All guide sign number panels and exit sign number panels as shown on the Tabulation Sheets are of Standard Sizes.

NOTE FOR IE6-1 AND IE6-6:

THE ADDITIONAL LEGEND "CAMPING" AND/OR APPROPRIATE DIRECTIONAL MESSAGE SUCH AS "SECOND RIGHT" MAY HAVE BEEN ADDED TO OR SUBSTITUTED DURING PLAN PREPARATION FOR ANY OF THE ABOVE LINES OF TEXT TO FIT INDIVIDUAL CONDITIONS. SEE THE GUIDE SIGN TABULATION SHEET FOR EXACT SIGN TEXT AND SIZE. THE LETTER SIZE AND SPACING SHOWN SHALL BE MAINTAINED.

GENERAL NOTES FOR GUIDE SIGNS

THE ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND WORDS SHALL CONFORM WITH THE FEDERAL HIGHWAY ADMINISTRATION'S "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS," LATEST EDITION, AND ANY APPROVED CHANGES THERETO. THE LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

UNLESS OTHERWISE SPECIFIED, ALL LEGEND AND BORDERS FOR ALL GREEN AND BLUE BACKGROUND GUIDE SIGNS SHALL HAVE REFLECTORIZED REMOVABLE COPY WITH WHITE FRAMES CONFORMING WITH THE SPECIFICATIONS. DIMENSIONS SHOWN FOR REMOVABLE COPY BORDERS AND CORNER RADII ARE NOMINAL DIMENSIONS. HOWEVER, REMOVABLE COPY BORDERS MAY VARY IN WIDTH AS MUCH AS PLUS ONE-HALF INCH; LIKEWISE, CORNER RADII ABOVE THREE INCHES MAY ALSO VARY IN RADIUS PLUS OR MINUS ONE INCH. BORDERS AND CORNER RADII MUST BE OF MATCHING WIDTHS. THE SIGN AREA OUTSIDE THE CORNER RADIUS NEED NOT BE TRIMMED.

THE BACKGROUND OF GROUND MOUNTED GUIDE SIGNS SHALL BE OF INTERSTATE GREEN FLAT SURFACE REFLECTIVE SHEETING CONFORMING WITH THE SPECIFICATIONS. THE BACKGROUND OF GROUND MOUNTED REST AREA AND SERVICES GUIDE SIGNS SHALL BE OF INTERSTATE BLUE FLAT SURFACE REFLECTIVE SHEETING CONFORMING WITH THE SPECIFICATIONS. THE BACKGROUND OF OVERHEAD GUIDE SIGNS SHALL BE INTERSTATE GREEN PORCELAIN ENAMEL CONFORMING WITH THE SPECIFICATIONS, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS.

ALL GROUND MOUNTED GUIDE SIGNS SHALL BE MADE OF 5/8" PLYWOOD (TYPE A) PANELS CONFORMING WITH THE SPECIFICATIONS, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS.

UNLESS OTHERWISE SPECIFIED, ALL OVERHEAD GUIDE SIGNS SHALL BE MADE OF ALUMINUM PANELS WHICH HAVE GREEN PROCELAIN ENAMEL ON ONE SIDE CONFORMING WITH THE SPECIFICATIONS. THE ALUMINUM PANELS SHALL BE TYPE B (EXTRUDED) OR TYPE C (HONEYCOMB) AS SPECIFIED IN THE CONTRACT AWARD. THE ALUMINUM PANEL THICKNESS SHALL BE AS SHOWN ON STANDARD PLAN SHEET IM(2).

SIGNS (SUCH AS EXIT NUMBER PANELS OR COMFORT STATION PANELS) ATTACHED ABOVE OR BELOW A PARENT SIGN SHALL BE MADE OF THE SAME TYPE OF MATERIAL AS THE PARENT SIGN.

MOUNTING DETAILS FOR GROUND MOUNTED GUIDE SIGNS ARE SHOWN ON THE STANDARD PLAN SHEETS SMD SERIES. THE MOUNTING DETAIL FOR THE OVERHEAD SIGNS SHALL BE AS DETAILED ELSEWHERE IN THE PLANS OR THE SUPPLIER'S CHOICE SUBJECT TO APPROVAL BY THE ENGINEER.

GENERAL NOTES FOR SIGNS ON THIS SHEET

F6 TYPE NUMBER PANELS SHOWN ARE USUAL AND STANDARD SIZES. HOWEVER, INDIVIDUAL PANEL SIZES MAY HAVE BEEN ADJUSTED DURING PLAN PREPARATION TO FIT ACTUAL PARENT SIGN SIZES WHERE NECESSARY. PANEL SIZES TO BE FURNISHED SHOULD BE AS DETAILED ELSEWHERE IN THE PLANS AND/OR AS SHOWN ON THE SIGN TABULATION SHEETS. THE PANEL AND BACKGROUND MATERIAL SHALL BE THE SAME AS THE PARENT SIGN.

FOR F18 AND F24 TYPE SIGNS, THE BACKGROUND SHALL BE A REFLECTIVE MATERIAL ON ONE PIECE SHEET ALUMINUM ALLOY 0.080 INCH THICK CONFORMING WITH THE SPECIFICATION ITEM 704. THE F24 TYPE SIGNS SHALL BE ATTACHED TO THE GUIDE SIGN AS DETAILED ON STANDARD SHEET IM(2). THE F18 TYPE SIGN IS MOUNTED AS SHOWN ON STANDARD SHEET D & M(1).

GENERAL NOTES:

THE ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND NUMBERALS SHALL CONFORM WITH THE FEDERAL HIGHWAY ADMINISTRATION'S "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS," LATEST EDITION, AND ANY APPROVED CHANGES THERETO. LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

THE FACE OF ALL U.S. AND STATE ROUTE MARKERS SHALL BE WHITE REFLECTIVE SHEETING CONFORMING WITH THE SPECIFICATION ITEM 716. THE LETTERS AND NUMERALS FOR THE U.S. AND STATE ROUTE MARKERS SHALL BE BLACK AND APPLIED TO THE REFLECTIVE MATERIAL BY THE SILK SCREEN PROCESS. THE SIGN BLANKS SHALL BE ONE PIECE SHEET ALUMINUM ALLOY 0.063 INCH THICK CONFORMING WITH THE SPECIFICATION ITEM 704.

THE FACE OF ALL INTERSTATE ROUTE MARKERS SHALL HAVE COLORED TRANSPARENT INK APPLIED OVER FLAT SURFACE REFLECTIVE SHEETING BY THE REVERSE SCREEN PROCESS. THE SIGN BLANKS SHALL BE ONE PIECE SHEET ALUMINUM ALLOY 0.063 INCH THICK CONFORMING WITH THE SPECIFICATION ITEM 704.

ALL SIGN BLANKS ON THIS SHEET SHALL BE ATTACHED TO THE GUIDE SIGN AS DETAILED ON STANDARD SHEET IM(2).

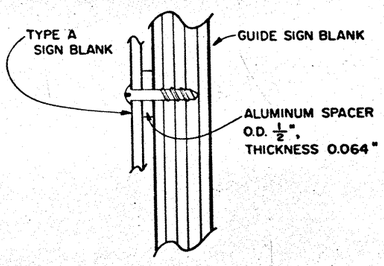
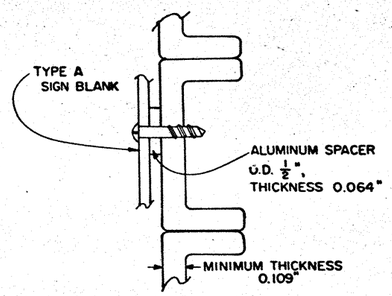
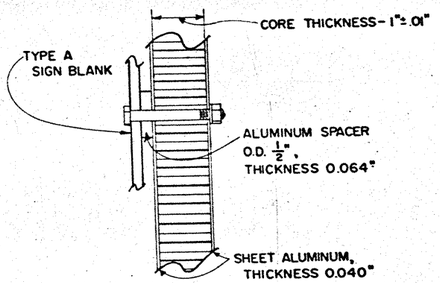
TYPICAL ATTACHMENT OF ROUTE MARKERS AND "EXIT ONLY" PANELS TO GUIDE SIGNS
DETAIL OF THICKNESSES FOR ALUMINUM TYPES B, C, E, G, K, AND L



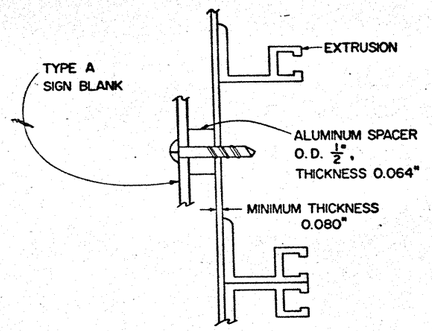
PLYWOOD GUIDE SIGN
($\frac{5}{8}$" TYPE A)



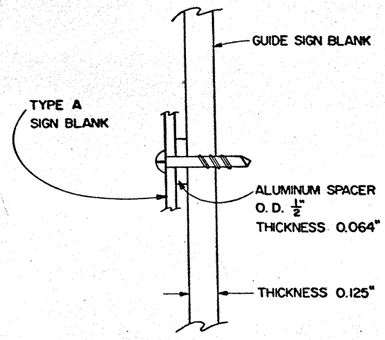
TYPE B AND E GUIDE SIGNS
(EXTRUDED ALUMINUM PANELS)



TYPE C AND G GUIDE SIGNS
(SHEET ALUMINUM HONEYCOMB PANELS)



TYPE K GUIDE SIGN
(EXTRUSHEET ALUMINUM PANELS)



TYPE L GUIDE SIGN
(MULTI-INCREMENT ALUMINUM PANELS)

NOTES

(1) ROUTE MARKERS ATTACHED TO GUIDE SIGNS SHALL BE TYPE A ALUMINUM, AS REQUIRED BY THE PLANS. SKETCHES SHOWN ABOVE ARE EXAMPLES ONLY.

(2) SCREWS OR BOLTS, NUTS AND WASHERS SHALL BE EITHER STAINLESS STEEL, GALVANIZED STEEL, OR ALUMINUM.

(3) ROUTE MARKERS ON "EXIT ONLY" PANELS SHALL BE ATTACHED TO PLYWOOD AND ALUMINUM TYPE B, E, K AND L SIGNS WITH SCREWS OF SUFFICIENT LENGTH TO HOLD THE BLANK FIRMLY IN PLACE. THE SCREWS FOR PLYWOOD SIGNS SHALL NOT PROTRUDE THROUGH THE BACK OF THE SIGN. ALL HOLES REQUIRED IN THE PUNCHING DETAIL OF THE BLANK SHALL HAVE SCREWS.

(4) ROUTE MARKERS OR "EXIT ONLY" PANELS SHALL BE ATTACHED TO ALUMINUM SIGNS TYPE C OR G BY 1/8" DIAMETER SLOTTED ROUND HEAD BOLTS WHICH PASS THROUGH THE GUIDE SIGN BLANK AND ARE SECURED WITH WASHERS AND NUTS ON THE BACK SIDE. PROJECTING THREADS SHALL BE BURRED TO PREVENT LOOSENING OF THE NUT.

GENERAL NOTES:

ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND NUMERALS SHALL CONFORM WITH THE FEDERAL HIGHWAY ADMINISTRATION'S "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS," LATEST EDITION, AND ANY APPROVED CHANGES THERETO. LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

SIGN BACKGROUNDS SHALL BE OF FLAT SURFACE REFLECTIVE SHEETING, CONFORMING WITH THE SPECIFICATIONS. SIGNS CONTAINING A RED COLOR MUST BE MADE OF FLAT SURFACE REFLECTIVE SHEETING USING THE REVERSE SCREEN PROCESS. THE LETTERS AND BACKGROUND OF THE ONE WAY SIGNS SHALL BE APPLIED TO THE WHITE REFLECTIVE MATERIAL BY THE REVERSE SCREEN PROCESS. FOR THE OTHER SIGNS, THE LETTERS, NUMERALS AND BORDERS SHALL BE APPLIED TO THE REFLECTIVE MATERIAL BY THE SILK SCREEN PROCESS.

THE SIGN BLANKS SHALL BE ONE PIECE 5/8 INCH THICK PLYWOOD (TYPE A) CONFORMING WITH THE SPECIFICATIONS, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS.

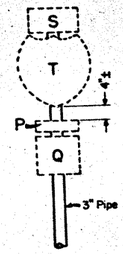
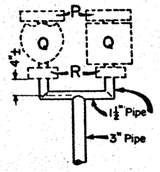
Type A

THIS TYPE PIPE MOUNT TO BE USED FOR ANY SIGN OR COMBINATION OF SIGNS WHEN THE SIGN AREA DOES NOT EXCEED 10 SQUARE FEET EXCEPT IR6-1 AND IW1-6 SIGNS (SEE TYPE D-1). THE AREA OF THE REGULATORY OR WARNING SIGN SUPPLEMENTARY PLAQUES SHALL NOT BE USED IN DETERMINING THE ABOVE SIGN AREA.



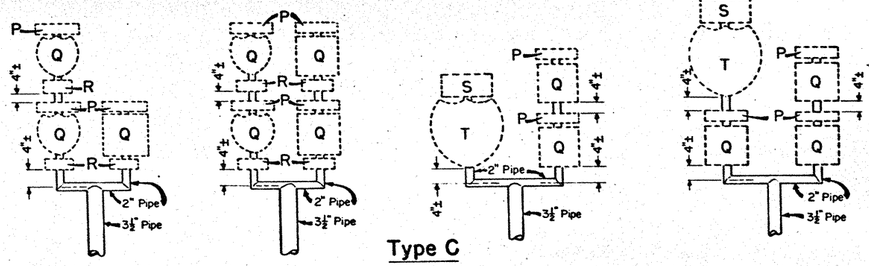
Type A-1

THIS TYPE PIPE MOUNT TO BE USED FOR A 36" OR 45" INTERSTATE ROUTE MARKER WITH A 24" OR 30" ROUTE MARKER ON MAIN LANES OR AS A SPECIFIED OPTIONAL SUBSTITUTE FOR TYPE B.



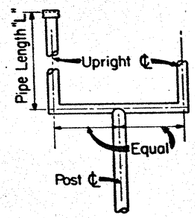
Type B

THIS TYPE PIPE MOUNT TO BE USED WHEN 2 ROUTE MARKERS OF THE SAME TYPE OR 2 ROUTE MARKERS OF DIFFERENT TYPES ARE REQUIRED.



Type C

THIS TYPE PIPE MOUNT TO BE USED:
1. WHEN 3 OR 4 ROUTE MARKERS ARE REQUIRED; OR
2. FOR A 36" OR 45" INTERSTATE ROUTE MARKER WITH 2 OR 3 24" AND/OR 30" ROUTE MARKERS.



See table at right for values of "L"

P = 24" x 12" Cardinal Direction Marker
Q_1 = 24" x 24" Interstate, U.S. or State Route Marker
Q_2 = 30" x 24" Interstate or U.S. Route Marker
R = 21" x 15" Direction Arrow
S = 30" x 15" Cardinal Direction Marker
T_1 = 36" x 36" (2) digit Interstate Route Marker
T_2 = 45" x 36" (3) digit Interstate Route Marker

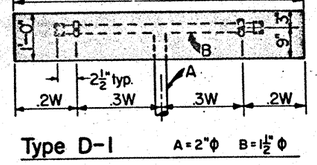
Marker Combinations	"L"
2P + 2Q + 2R + 7"	9'-1"
P + 2Q + 2R + 7"	8'-1"
2Q + 2P + 7"	6'-7"
Q + R + 3"	3'-6"
S + T + 3"	4'-6"
P + Q + R + 3"	4'-6"
P + Q + S + T + 7"	7'-10"

DIMENSION "S"

DIMENSION "S" EQUALS THE DISTANCE FROM THE ℄ OF UPRIGHT TO THE ℄ OF CLEARANCE BETWEEN SIGN GROUP.

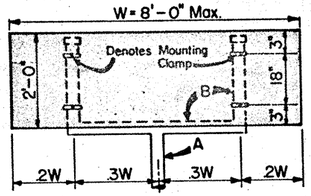
"S" = 1'-4½" for Q_1
"S" = 1'-7½" for Q_2

"S" = 1'-10½" for T_1
"S" = 2'-3" for T_2

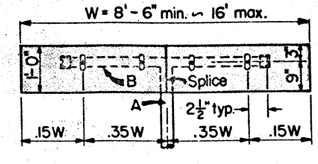


Type D-1 A = 2"φ B = 1½"φ

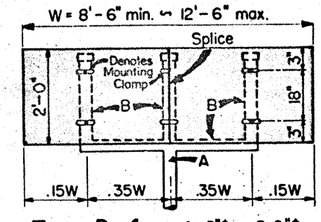
NOTE:
1. FOR IR6-1 SIGN, MOUNTING CLAMPS ARE SPACED 28" APART.
2. FOR W1-6 SIGN, MOUNTING CLAMPS ARE SPACED 30" APART.



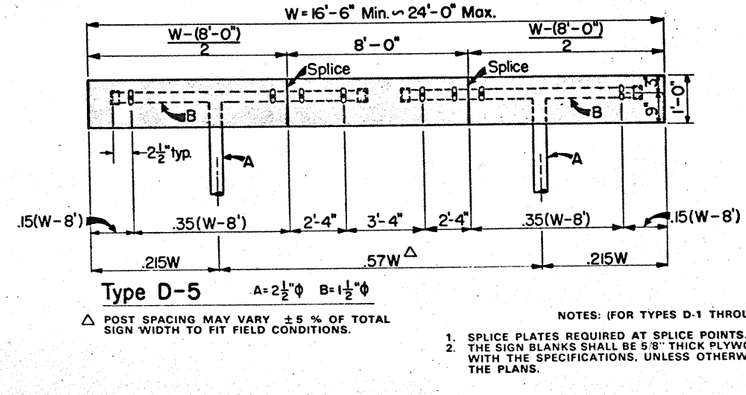
Type D-2 A = 2½"φ B = 1½"φ



Type D-3 A = 2½"φ B = 1½"φ

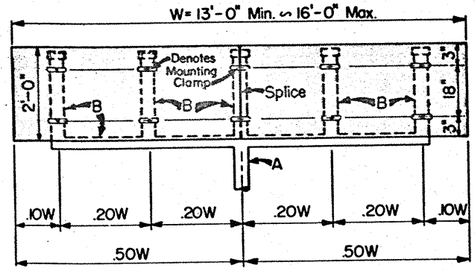


Type D-4 A = 3"φ B = 2"φ



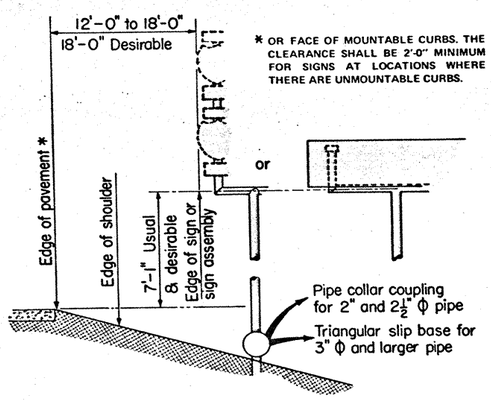
Type D-5 A = 2½"φ B = 1½"φ

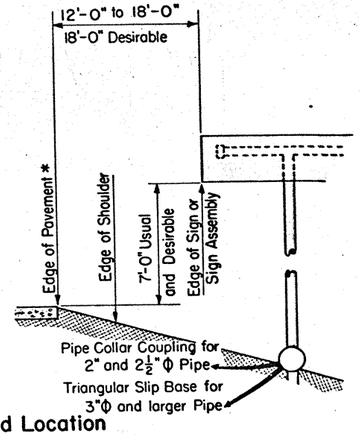
△ POST SPACING MAY VARY ±5 % OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.



Type D-6 A = 3"φ B = 2"φ

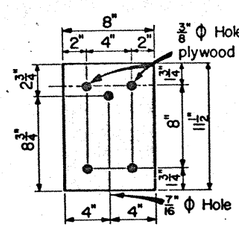
NOTES: (FOR TYPES D-1 THROUGH D-6)
1. SPLICE PLATES REQUIRED AT SPLICE POINTS.
2. THE SIGN BLANKS SHALL BE 5/8" THICK PLYWOOD (TYPE A) CONFORMING WITH THE SPECIFICATIONS, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS.





Typical Sign Installation and Location

GENERAL NOTES:
1. PIPE COLLAR COUPLING SHALL BE USED FOR ALL SIGNS SUPPORTED ON 2" AND 2½" PIPE POSTS.
2. TRIANGULAR SLIP BASE SHALL BE USED FOR SIGNS SUPPORTED ON 3" AND LARGER PIPE POSTS.
3. PIPE COLLAR COUPLING, TRIANGULAR SLIP BASE, AND FOUNDATION DETAILS ARE SHOWN ON SHEET SMD(1-3).
4. MOUNTING CLAMP, WELDED PIPE MOUNT, AND FRICTION CAP DETAIL ARE SHOWN ON SHEET SMD(1-2).



Splice Plates

SPLICE PLATES SHALL BE 1/8" STEEL PLATE (A.S.T.M.-A36) OR 0.187" ALUMINUM PLATE (A.S.T.M.-B-209 ALLOY 6061-T6, OR A.S.T.M. B-221 ALLOY 6061-T6). STEEL SHALL BE GALVANIZED IN ACCORDANCE WITH ITEM 442 OF STANDARD SPECIFICATIONS.

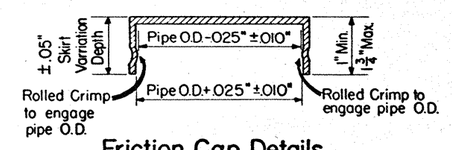
Typical Detail of Back To Back Mounting Of Signs



Friction Cap Details

NOTES:
FRICTION CAPS MAY BE MANUFACTURED FROM EITHER HOT ROLLED OR COLD ROLLED STEEL SHEETS. FOR ALL PIPE SIZES THE MINIMUM SHEET METAL THICKNESS SHALL BE 24 GAUGE.

THE RIM EDGES SHALL BE REASONABLY STRAIGHT AND SMOOTH. CAPS SHALL BE SIZED AND FORMED IN SUCH A MANNER AS TO PRODUCE A DRIVE-ON FRICTION FIT AND HAVE NO TENDENCY TO ROCK WHEN SEATED ON THE PIPE. THE DEPTH SHALL BE SUFFICIENT TO GIVE POSITIVE PROTECTION AGAINST ENTRANCE OF RAINWATER. THEY SHALL BE FREE OF SHARP CREASES OR INDENTATIONS AND SHOW NO EVIDENCE OF METAL FRACTURE.

CAPS SHALL HAVE AN ELECTRODEPOSITED COATING OF ZINC IN ACCORDANCE WITH THE REQUIREMENTS OF A.S.T.M. SPECIFICATION A164, TYPE GS.

WELDED PIPE MOUNT DETAILS

NOTE:

THE CONTRACTOR AT HIS OPTION MAY FURNISH STANDARD WEIGHT PIPE CONFORMING TO ASTM SPECIFICATION A-53B, A-501 OR ANY OTHER STANDARD WEIGHT STEEL PIPE, EITHER OF ELECTRIC RESISTANCE WELDED OR SEAMLESS TYPE, WITH A MINIMUM YIELD STRENGTH OF 35,000 PSI AND A MINIMUM ELONGATION OF 15 PERCENT IN 2 INCHES; AND SHALL HAVE OUTSIDE DIAMETERS AND WALL THICKNESSES WHICH ARE EQUIVALENT TO OR BETTER THAN THOSE SPECIFIED HEREON.

ALL PIPES TO BE WELDED SHALL BE OF WELDABLE QUALITY.

Sign Post & Stub Post Elevation

NOTES:

① THE TOP PLATE OF THE TRIANGULAR SLIP BASE SHALL HAVE THE SAME EXTERIOR DIMENSIONS AS THE BOTTOM PLATE. THE LIFTING CONE SHALL BE WELDED TO THE BOTTOM PLATE ONLY. A HOLE EQUAL TO THE INSIDE DIAMETER OF THE SIGN POST SHALL BE CUT THROUGH THE CENTER OF THE TOP PLATE WITH THE HOLE EDGE BEVELED AS DETAILED.

② PLATES FOR THE BASE CONNECTION AND LIFTING CONE SHALL CONFORM WITH THE REQUIREMENTS OF A.S.T.M.-A36, A441 OR A572 GRADE 50.

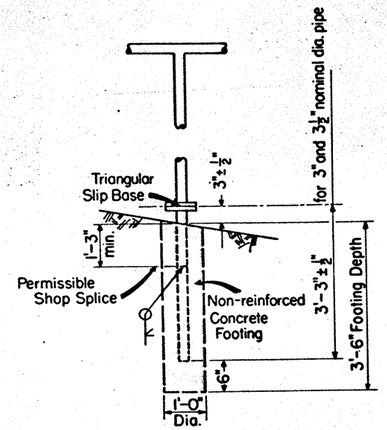
③ ALL STRUCTURAL STEEL, BOLTS, NUTS AND WASHERS SHALL BE GALVANIZED AS PER ITEM 442 OF THE STANDARD SPECIFICATIONS EXCEPT AS NOTED. GALVANIZING OF ALL POSTS SHALL BE PROJECTION ABOVE CONCRETE PLUS 6" MINIMUM.

④ ALL HIGH STRENGTH BOLTS SHALL CONFORM TO ASTM-A325 (ASTM-A449 MAY BE SUBSTITUTED FOR ASTM-A325 PROVIDED PROPER BOLT HEAD, NUT AND OR WASHER CLEARANCES ARE MAINTAINED). ALL HIGH STRENGTH NUTS SHALL BE OF SUCH CAPACITY AS TO DEVELOP THE BOLT STRENGTH.

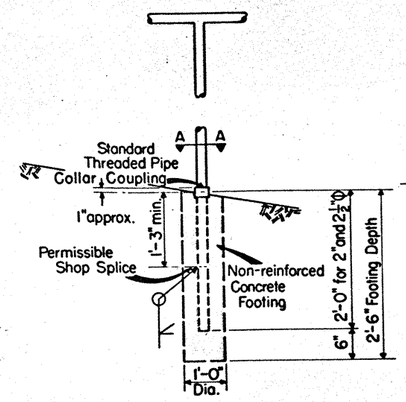
⑤ PAYMENT FOR THE TRIANGULAR SLIP BASE WILL BE INCLUDED IN PRICE BID PER LINEAR FOOT OF PIPE.

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

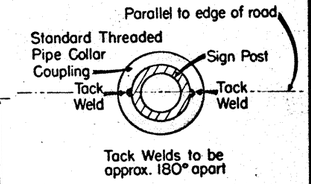
1. ASSEMBLE POST TO STUB WITH BOLTS AND WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES AS SHOWN.
2. SHIM AS REQUIRED TO PLUMB POST.
3. TIGHTEN ALL BOLTS THE MAXIMUM POSSIBLE WITH 12" TO 15" WRENCH TO BED WASHERS AND SHIMS AND TO CLEAN BOLT THREADS, THEN LOOSEN EACH BOLT IN TURN AND RETIGHTEN BOLTS IN A SYSTEMATIC ORDER TO THE PRESCRIBED TORQUE OF 450 INCH-POUNDS, DO NOT OVER TIGHTEN.
4. BURR THREADS AT JUNCTION WITH NUT USING A CENTER PUNCH TO PREVENT NUT LOOSENING.



Triangular Slip Base Foundation Details

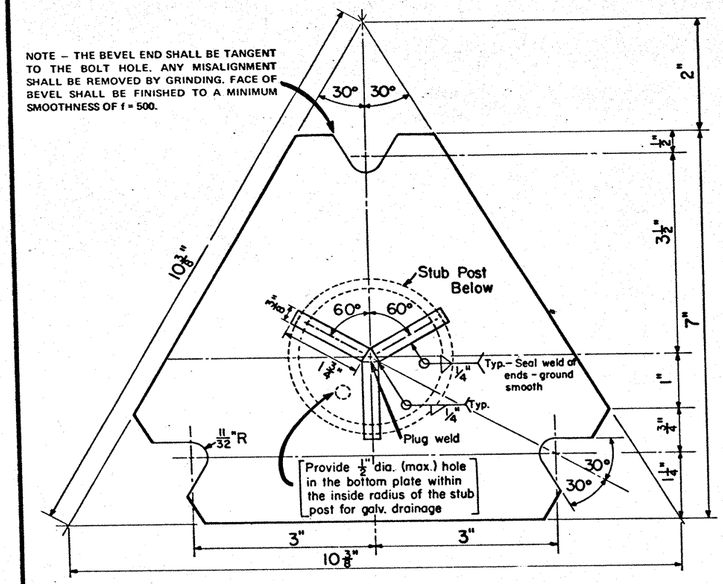


BREAKAWAY PIPE COLLAR COUPLING

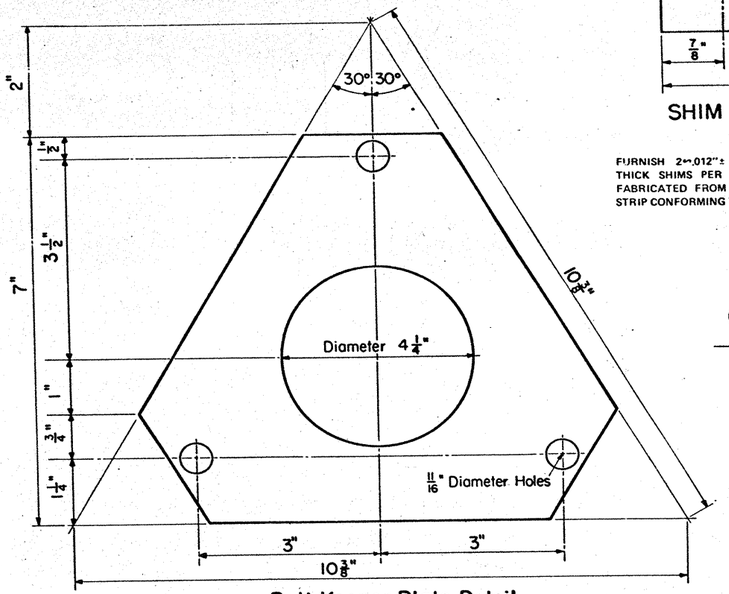


Section A-A

TRIANGULAR SLIP BASE

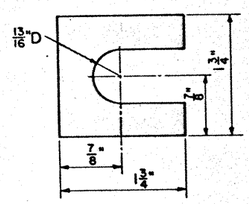


View A-A



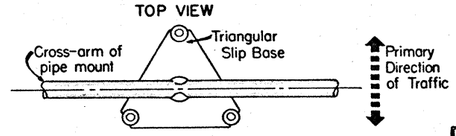
Bolt Keeper Plate Detail

Bolt Keeper Plate shall be 30 ga. galvanized sheet steel.



SHIM DETAIL

FURNISH 2⁽⁺⁾.012" ± THICK AND 2⁽⁺⁾.032" ± THICK SHIMS PER POST. SHIMS SHALL BE FABRICATED FROM BRASS SHIM STOCK OR STRIP CONFORMING TO A.S.T.M. –B36.



The cross-arm of the pipe mount should be parallel to one side of the triangular slip base, and approximately perpendicular to the direction of traffic in accordance with specification item 728.

ORIENTATION OF TRIANGULAR SLIP BASE

GENERAL NOTES:

DESIGN CONFORMS WITH A.A.S.H.T.O. SPECIFICATIONS FOR THE DESIGN AND CONSTRUCTION OF STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS.

MATERIAL AND FABRICATION SHALL CONFORM TO THE REQUIREMENTS OF TEXAS HIGHWAY DEPARTMENT STANDARD SPECIFICATIONS AND SPECIAL SPECIFICATIONS.
PIPE COLLAR COUPLING SHALL BE USED FOR ALL SIGNS SUPPORTED ON 2" and 2½" DIAMETER PIPE POSTS.

TRIANGULAR SLIP BASE SHALL BE USED FOR SIGNS SUPPORTED ON 3" DIAMETER AND LARGER PIPE POSTS.

WHERE SOLID ROCK IS ENCOUNTERED, FOOTING SHALL BE PLAN DEPTH OR EXTEND TWO FEET MINIMUM INTO THE ROCK.

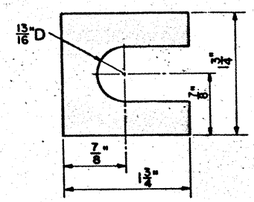
TYPE G MOUNT

THIS TYPE BEAM MOUNT TO BE USED:
(1) FOR SPEED LIMIT SIGN IR2-1 WHEN USED IN COMBINATION WITH IR2-2, IR2-3, AND IR2-4, OR FOR IR2-2A.
(2) FOR DO NOT ENTER SIGN IR5-1 WHEN USED WITH WRONG WAY SIGN IR5-9. IR5-9 IS MOUNTED ABOVE IR5-1.

Post Weight Data
And
Permissible Shop Splice

THE WEIGHT OF ONE 417.7 POST IS EQUAL TO 112.2 LBS. PLUS 7.7 LBS./FT X(POST LENGTH IN FEET MINUS 10 FT.) THE WEIGHT OF 112.2 LBS. INCLUDES 10' OF POST LENGTH. POST FOUNDATION STUB, RELATED CONNECTION PLATES, FRICTION FUSE PLATE, AND ALL HIGH STRENGTH BOLTS, NUTS, AND WASHERS.



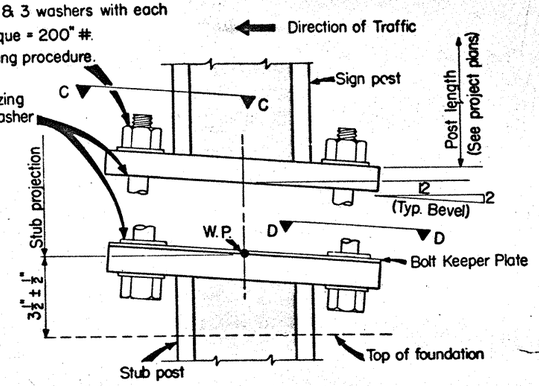
SHIM DETAIL

FURNISH 2 @ .012" ± THICK AND 2 @ .032" ± THICK SHIMS PER POST. SHIMS SHALL BE FABRICATED FROM BRASS SHIM STOCK OR STRIP CONFORMING TO A.S.T.M. -B36.

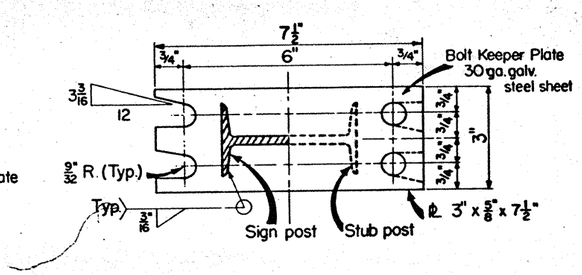
BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:
1. ASSEMBLE POST TO STUB WITH BOLTS AND WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. SHIM AS REQUIRED TO PLUMB POST.
3. TIGHTEN ALL BOLTS THE MAXIMUM POSSIBLE WITH 12" TO 15" WRENCH TO BED WASHERS AND SHIMS AND TO CLEAN BOLT THREADS, THEN LOOSEN EACH BOLT IN TURN AND RETIGHTEN BOLTS IN A SYSTEMATIC ORDER TO 200 ft. lbs. TORQUE. DO NOT OVERTIGHTEN.
4. BURR THREADS AT JUNCTION WITH NUT USING A CENTER PUNCH TO PREVENT NUT LOOSENING.

½" ϕ x 2½" H.S. bolt with hex. hd., hex. nut & 3 washers with each bolt. Torque = 200" #. See bolting procedure.

Remove all galvanizing runs or beads in washer area.

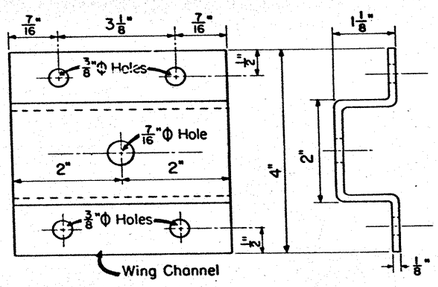


SIGN POST AND STUB POST ELEVATION FOR TYPE G MOUNT

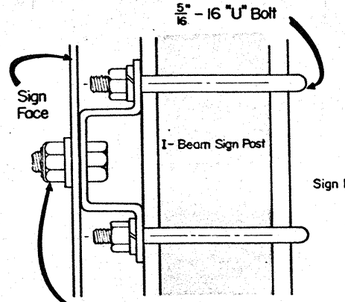


Section C-C Section D-D

NOTE: Sections shown are for installations on right shoulder and in gore. Plate slot bevels are opposite hand from that shown for installations on left shoulder.

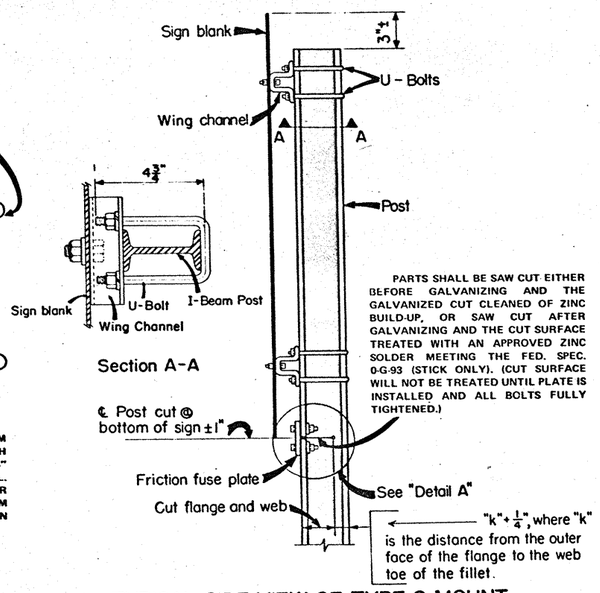


WING CHANNEL, 4" WIDTH x 1 1/8" DEPTH x 1/8" THICKNESS, SHALL BE ALUMINUM (ASTM B-221 6061-T6 OR B308 6061-T6), GALV. STEEL (ASTM A-36) OR STAINLESS STEEL (ASTM A-:67 TYPE 304, NO. 2B FINISH).



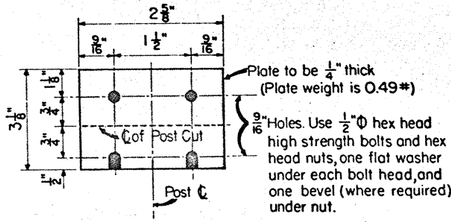
GALV. STEEL OR ALUMINUM SELF-LOCKING HEX. HEAD NUT WITH NON-METALIC INSERT. 3/8" - 16 x 3/4" HEX. HEAD BOLT FOR SHEET METAL. 3/8" - 16 x 1 1/4" HEX. HEAD BOLT FOR SHEET PLYWOOD. 3/8" MEDIUM WASHER GALV. STEEL SHALL BE AS IN ASTM A 164 TYPE GS.

WING CHANNEL CLAMP DETAIL
FOR HOLDING SIGNS TO TYPE G MOUNT



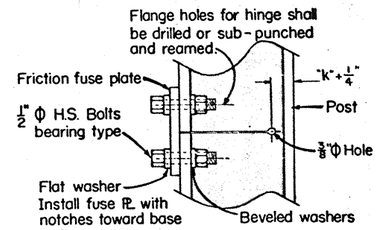
PARTS SHALL BE SAW CUT EITHER BEFORE GALVANIZING AND THE GALVANIZED CUT CLEANED OF ZINC BUILD-UP, OR SAW CUT AFTER GALVANIZING AND THE CUT SURFACE TREATED WITH AN APPROVED ZINC SOLDER MEETING THE FED. SPEC. O-G-93 (STICK ONLY). (CUT SURFACE WILL NOT BE TREATED UNTIL PLATE IS INSTALLED AND ALL BOLTS FULLY TIGHTENED.)

TYPICAL SIDE VIEW OF TYPE G MOUNT



Friction Fuse Plate Detail

NOTCHED STEEL FRICTION FUSE PLATES SHALL CONFORM TO THE REQUIREMENTS OF ASTM-A441. (ASTM-A572 GRADE 50 OR ASTM-A588 MAY BE SUBSTITUTED FOR A441 AT THE OPTION OF THE FABRICATOR). ALL HOLES SHALL BE DRILLED. ALL PLATE CUTS SHALL PREFERABLY BE SAW CUTS. HOWEVER; FLAME CUTTING WILL BE PERMITTED PROVIDED ALL EDGES ARE GROUND. METAL PROJECTING BEYOND THE PLANE OF THE PLATE FACE WILL NOT BE PERMITTED.



Detail "A" Hinge

FABRICATOR NOTE: IMPORTANT - ALL FRICTION FUSE BOLTS SHALL BE TIGHTENED IN THE SHOP FOLLOWING A METHOD APPROVED BY THE ENGINEER. TIGHTENING SHALL BE TO SUCH A DEGREE AS TO OBTAIN 12,050 LBS. OF MINIMUM RESIDUAL TENSION IN EACH 1/2" DIAMETER BOLT.

GENERAL NOTES:
DESIGN CONFORMS WITH A.A.S.H.T.O. SPECIFICATIONS FOR THE DESIGN AND CONSTRUCTION OF STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS.

MATERIALS AND FABRICATION SHALL CONFORM TO THE REQUIREMENTS OF TEXAS HIGHWAY DEPARTMENT STANDARD SPECIFICATIONS AND SPECIAL SPECIFICATIONS.

ALL HIGH STRENGTH BOLTS, NUTS, AND WASHERS SHALL CONFORM TO ASTM-A325 (ASTM-A449 MAY BE SUBSTITUTED FOR ASTM-A325 PROVIDED PROPER BOLT HEAD, NUT AND/OR WASHER CLEARANCES ARE MAINTAINED).

ALL BOLTS OTHER THAN HIGH STRENGTH BOLTS SHALL CONFORM TO ASTM-A307 CLASS A (ASTM-A394, A325 OR A449 MAY BE SUBSTITUTED FOR ASTM-A307 PROVIDED PROPER BOLT HEAD, NUT AND/OR WASHER CLEARANCES ARE MAINTAINED).

ALL STRUCTURAL STEEL, BOLTS, NUTS, AND WASHERS SHALL BE GALVANIZED AS PER ITEM 442 OF THE STANDARD SPECIFICATION. STRUCTURAL STEEL TO BE GALVANIZED AFTER FABRICATON EXCEPT AS NOTED.

STRUCTURAL STEEL SHALL CONFORM WITH THE REQUIREMENTS OF ASTM SPECIFICATION A441.(ASTM-A572 GRADE 50 OR ASTM-A588 MAY BE SUBSTITUTED FOR A441 AT THE OPTION OF THE FABRICATOR).

GALVANIZING OF ALL POSTS SHALL BE PROJECTION ABOVE CONCRETE PLUS 6" MINIMUM.

WHERE SOLID ROCK IS ENCOUNTERED, FOOTING SHALL BE PLAN DEPTH OR EXTEND TWO FEET MINIMUM INTO THE ROCK.

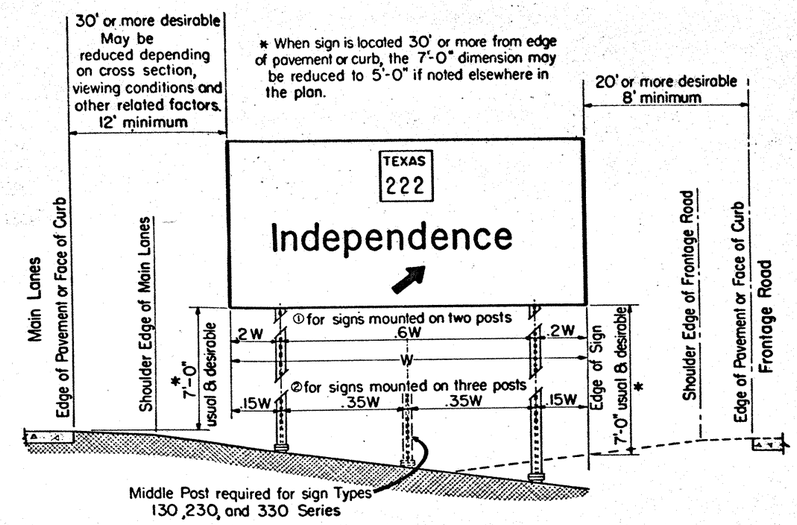
⚠ APPROXIMATELY EQUAL SPACING ~ FABRICATOR MAY VARY SPACING FOR LEAST INTERFERENCE WITH MESSAGE AND TO UTILIZE WIND BEAM FOR HORIZONTAL SPLICE PROVIDED NO WIND BEAM SPACING EXCEEDS THE MAXIMUM SHOWN IN THE TABLE.

⚠ FOR SIGNS 4'-0" OR LESS IN DEPTH THE PLYWOOD PANEL MAY BE A MAXIMUM WIDTH OF 8'-0" WITHOUT A SPLICE.

⚠ EXTRUDED ALUMINUM WIND BEAMS. (SEE SHEET SMD(8-2)FOR DETAIL.) WINDBEAMS TO BE CONTINUOUS WITH NO SPLICES.

TYPICAL ASSEMBLY FOR GROUND MOUNTED GUIDE SIGNS



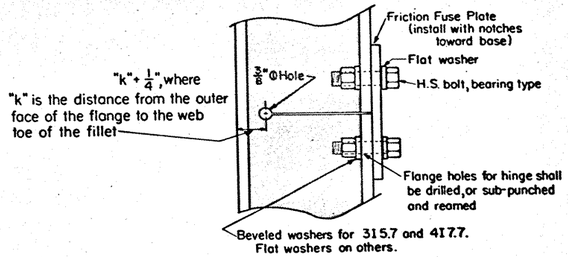
TYPICAL SIGN INSTALLATION AND LOCATION

① POST SPACINGS MAY BE VARIED A MAXIMUM OF PLUS 10% TO MINUS 10% OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.

② POST SPACINGS MAY BE VARIED A MAXIMUM OF PLUS 5% TO MINUS 5% OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.

NOTE:

1. A TOLERANCE OF PLUS OR MINUS 1/4 INCH WILL BE PERMITTED IN THE PLAN DIMENSIONS FOR FABRICATION OF EACH SINGLE INCREMENT SIGN PANEL WHEN NECESSARY FOR SQUARING. A TOLERANCE OF PLUS OR MINUS 1/4 INCH WILL BE PERMITTED FOR EACH INCREMENT OF A MULTI-INCREMENT SIGN PANEL WHERE NECESSARY TO SECURE SQUARE, TIGHT-FITTING JOINTS.
2. PLYWOOD BOLTS: 5/16" x 1 1/2" FLAT HEAD ELEVATOR TYPE STEEL BOLT WITH 3/4" MINIMUM THREAD LENGTH. THE HEAD SHALL HAVE A MINIMUM DIAMETER OF 3/4" AND SHALL HAVE A MINIMUM OF TWO FINS ON THE UNDERSIDE. EACH BOLT SHALL BE PROVIDED WITH ONE 5/16" STEEL HEX NUT, ONE 5/16" STEEL FLAT WASHER, AND ONE 5/16" STEEL LOCK WASHER. BOLTS, NUTS, AND WASHERS SHALL BE HOT DIPPED GALVANIZED AS PER ITEM 442 OF STANDARD SPECIFICATIONS.
3. SPLICE BARS SHALL BE SECURED WITH 5/8" LONG x NO. 10 ROUND HEAD, CADMIUM PLATED, BRASS WOOD SCREWS SPACED AT 6" MAXIMUM ALONG DOUBLE ROW SPACING WITH THE EXCEPTION AT EXTREME ENDS OF SPLICE BARS, ALONG OUTSIDE EDGE OF SIGN, WHERE PLYWOOD BOLTS SHALL BE USED AS SHOWN. A MAXIMUM OF ONE HORIZONTAL JOINT PER VERTICAL SECTION WILL BE PERMITTED USING A 1/8" GAP BETWEEN PANELS AND AN ALUMINUM WASHER BETWEEN THE SPLICE PLATE AND THE PLYWOOD.



DETAIL "A"-HINGE

FABRICATOR NOTE: IMPORTANT - ALL FRICTION FUSE BOLTS SHALL BE TIGHTENED IN THE SHOP FOLLOWING A METHOD APPROVED BY THE ENGINEER. TIGHTENING SHALL BE TO SUCH A DEGREE AS TO OBTAIN THE FOLLOWING MINIMUM RESIDUAL TENSION IN EACH BOLT:

BOLT SIZE	MIN. RESIDUAL BOLT TENSION
1/2"Φ	12050 LBS.
5/8"Φ	19200 LBS.
3/4"Φ	28400 LBS.

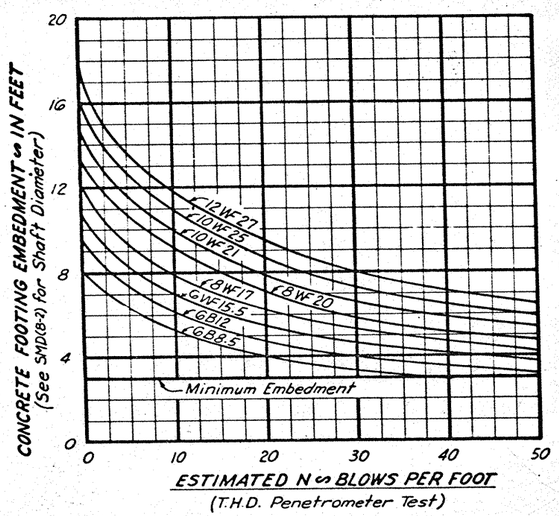
DRILLED CONCRETE FOOTING DEPTH CHART (COHFRIC DESIGN)

NOTE: THESE CHARTS MAY BE USED AS AN ALTERNATE TO THE CHART BELOW, PROVIDED THAT SOIL COHESION AND INTERNAL FRICTION (COHFRIC) DATA ARE AVAILABLE.

LEGEND:

L = Required embedment of concrete drilled shaft, in feet
C = Cohesive shear strength of soil, in psf
Ø = Angle of internal friction of soil, in degrees

For values of C and Ø which are intermediate to those on the charts, embedments may be determined by straight-line interpolation.



DRILLED CONCRETE FOOTING DEPTH CHART (THD PENETROMETER DESIGN)

NOTE: ESTIMATED N SHOULD BE BASED AT APPROXIMATELY THE UPPER ONE-THIRD POINT OF THE DRILLED CONCRETE FOOTING BELOW THE GROUND LINE

Note:

1. Curves shown on this sheet are applicable for reinforced concrete footings only.

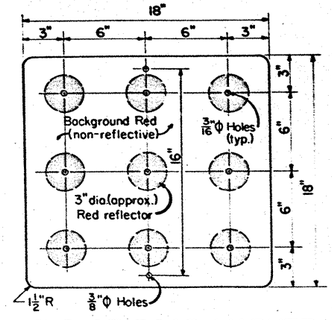
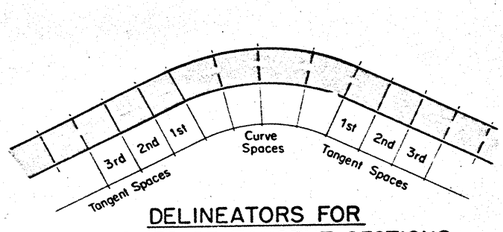
OBJECT MARKER TYPE V-A

The dimensions shown are minimum except for the hole sizes and reflector size



END OF ROAD MARKER TYPE VI-A

The Type V-A Object Marker and the Type VI-A End of Road Marker shall consist of center mount reflector units mounted on 0.080" thick sheet aluminum conforming with ASTM B209 Alloy 6061-T6, or 12 gage sheet steel conforming with ASTM A-415. Independently housed delineators are permissible for Type V-A and VI-A Markers.



DELINEATORS FOR CURVES OR TANGENT SECTIONS

The delineator spacing, S, on the curve is found from the formula $S = 3\sqrt{R-50}$, where R is the radius of the curve in feet. The first spaces immediately in advance of and beyond the curve are 2.0 x S; the second spaces are 3.0 x S, and the third spaces are 6.0 x S but not to exceed 300 feet. Distance for spaces rounded to nearest 5 feet.

PAVEMENT MARKERS
(REFLECTORIZED)
TYPES I & II

Minimum area of markers exposed to traffic shall be not less than 12.5 square inches.

GENERAL NOTES:

THE PAVEMENT UPON WHICH THE TRAFFIC BUTTONS, PAVEMENT MARKERS, AND JIGGLE BARS ARE TO BE PLACED SHALL BE GROUND, BUFFED, SANDBLASTED, OR OTHERWISE PREPARED AND APPROVED BY THE ENGINEER TO INSURE PROPER CLEANING OF THE PAVEMENT SURFACE. THEY SHALL BE BONDED TO THE ROADWAY SURFACE WITH EPOXY ADHESIVE CONFORMING WITH THE SPECIFICATIONS.

USUAL JIGGLE BAR SPACING IS 50' ON MEDIAN PAVED SHOULDERS, 100' ON OUTSIDE PAVED SHOULDERS AND SHALL BE MOUNTED PERPENDICULAR TO THE ROADWAY.

JIGGLE BARS SHALL ALSO BE PLACED AT SUCH OTHER LOCATIONS AS SHOWN ON THE PLAN AND PROFILE SHEETS OR WHERE DIRECTED BY THE ENGINEER.

MARKERS SHOWN ARE FOR ILLUSTRATION PURPOSES ONLY. THEY ARE NOT INTENDED TO SPECIFY ANY PARTICULAR PRODUCT.

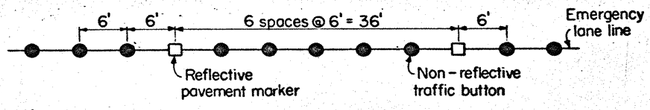
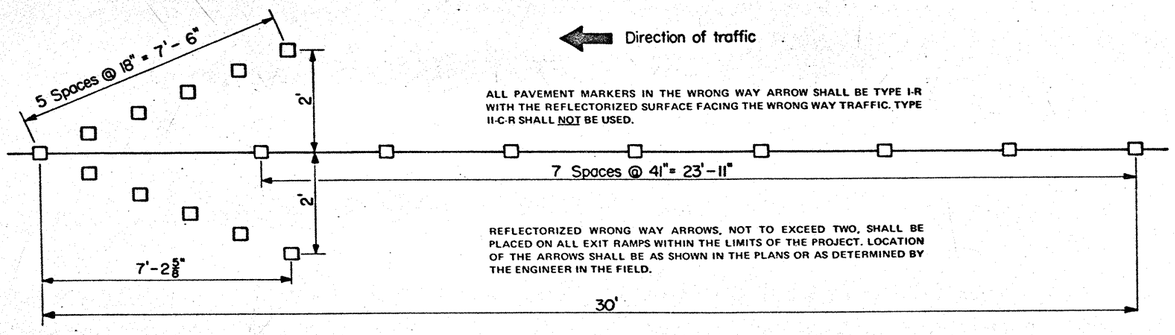
PATTERN "C"



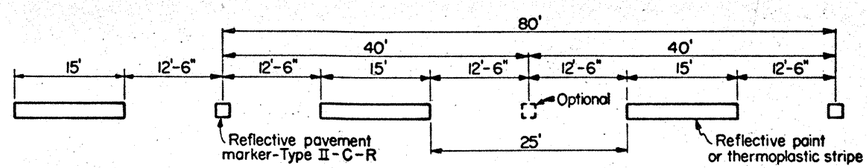
TRAFFIC BUTTONS FOR EMERGENCY LANE & SHOULDER EDGE LINES



ALL PAVEMENT MARKERS IN THE WRONG WAY ARROW SHALL BE TYPE I-R WITH THE REFLECTORIZED SURFACE FACING THE WRONG WAY TRAFFIC. TYPE II-C-R SHALL NOT BE USED.

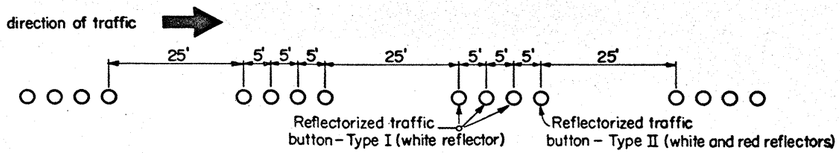
REFLECTORIZED WRONG WAY ARROWS, NOT TO EXCEED TWO, SHALL BE PLACED ON ALL EXIT RAMPS WITHIN THE LIMITS OF THE PROJECT. LOCATION OF THE ARROWS SHALL BE AS SHOWN IN THE PLANS OR AS DETERMINED BY THE ENGINEER IN THE FIELD.

WRONG WAY ARROW DETAIL



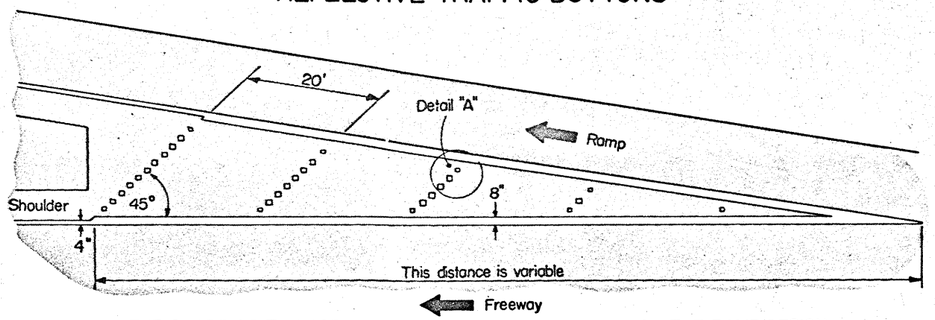
PAVEMENT MARKERS (REFLECTORIZED) TYPE II-C-R SHALL BE SPACED ON 80' CENTERS WITH THE CRYSTAL FACE TOWARD NORMAL TRAFFIC AND THE RED FACE TOWARD WRONG WAY TRAFFIC. THE MARKERS MAY ALSO BE SPACED ON EITHER 40' OR 160' CENTERS WHEN SHOWN ELSEWHERE IN THE PLANS.

REFLECTIVE PAVEMENT MARKERS ALONG PAINTED TRAFFIC LANE LINES



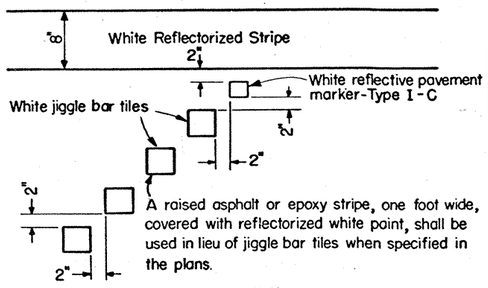
TRAFFIC BUTTONS (REFLECTORIZED) SHALL BE SPACED AS SHOWN WITH THE WHITE REFLECTIVE FACE TOWARD NORMAL TRAFFIC AND THE RED REFLECTIVE FACE TOWARD WRONG WAY TRAFFIC.

TRAFFIC LANE LINES FORMED WITH REFLECTIVE TRAFFIC BUTTONS



THE SHAPE OF THE GORE MARKING WILL VARY DEPENDING ON THE RAMP DESIGN AND WILL BE AS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER.

TYPICAL EXIT RAMP GORE MARKING



A raised asphalt or epoxy stripe, one foot wide, covered with reflectorized white paint, shall be used in lieu of jiggle bar tiles when specified in the plans.

ESTIMATE & QUANTITY SHEET 12

STATE DIST. NO.	COUNTY	PROJECT NO.	SHEET NO.
21	WEBB,ETC.	CSB 18-3-28,ETC.	12

GENERAL NOTES AND SPECIFICATION DATA--

GENERAL NOTES AND SPECIFICATION DATA

GENERAL

PAVEMENT MARKINGS FURNISHED AND INSTALLED BY STATE FORCES WILL BE IN ACCORDANCE WITH THE M.U.T.C.D.

CONSTRUCTION STATIONING, FOR SURVEYING AND BOOKKEEPING PURPOSES, WILL BE SIMPLIFED BY EQUATING CONSTRUCTION STATION 0+00 TO THE BEGINNING STATION NUMBER OF EACH PROJECT AND CONTINUING THE CONSTRUCTION STATIONING TO THE END OF THE PROJECT ON THE BASIS OF TRUE LENGTH, WHICH WILL BE EQUATED TO THE ENDING STATION NUMBER.

ITEM 4 SCOPE OF WORK

AGGREGATE STOCKPILES REMAINING ON STATE'S RIGHT OF WAY 30 DAYS AFTER PROJECTS "FINAL ACCEPTANCE" WILL BECOME PROPERTY OF THE DEPARTMENT OF HIGHWAYS AND PUBLIC TRANSPORTATION. AGGREGATE STOCKPILES DEEMED UNDESIRABLE BY THE ENGINEER SHALL BE REMOVED IN ACCORDANCE WITH THE PERTINENT SPECIFICATIONS OF THIS PROJECT.

ITEM 7 LEGAL RELATIONS AND RESPONSIBILITIES TO THE PUBLIC

UPON COMPLETION OF ALL WORK PROVIDED FOR IN THE CONTRACT FOR ANY INDIVIDUAL PROJECT, THE ENGINEER WILL MAKE AN INSPECTION, AND IF THE WORK IS FOUND TO BE SATISFACTORY THE CONTRACTOR WILL BE RELEASED FROM FURTHER MAINTENANCE ON THAT PROJECT. SUCH PARTIAL ACCEPTANCE WILL BE MADE IN WRITING AND SHALL IN NO WAY VOID OR ALTER ANY TERMS OF THE CONTRACT.

ITEM 302 AGGREGATE FOR SURFACE TREATMENTS

AGGREGATES FOR SURFACE TREATMENT SHALL HAVE THE FOLLOWING MINIMUM POLISH VALUES:

PROJECT	HIGHWAY	POLISH VALUE
CSB 237-3-20	FM 863	NONE REQUIRED
CSB 2988-2-6	FM 2895	NONE REQUIRED

THE AGGREGATE SHALL NOT CONTAIN MORE THAN 0.5% BY WEIGHT OF FINE DUST, CLAY-LIKE PARTICLES AND/OR SILT WHEN TESTED IN ACCORDANCE WITH TEST METHOD TEX-217-F PART II.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 304 AGGREGATE FOR SURFACE TREATMENTS (PRECOATED)

AGGREGATES FOR SURFACE TREATMENTS SHALL HAVE THE FOLLOWING MINIMUM POLISH VALUES:

PROJECT	HIGHWAY	POLISH VALUE
CSB 18-3-28	IH 35	30
CSB 18-4-30	IH 35	30
CSB 517-7-24	SH 16	28
CSB 517-6-16	SH 16	28
CSB 255-6-39	US 281	30
CSB 255-7-80	US 281	30
CSB 255-7-82	US 281	30

ITEM 316 SEAL COAT

PRIOR TO SHIPPING ASPHALT TO THE PROJECT THE CONTRACTOR SHALL FURNISH THE ENGINEER WITH THE NAME OF THE SUPPLIER AS WELL AS SAMPLES OF THE ASPHALT HE PROPOSES TO USE SO THAT THE GRADE AND RATE OF APPLICATION OF ASPHALT MAY BE DETERMINED.

IN ADDITION TO CLEANING OF PAVED SURFACES TO BE SEALED BY BROOMING, AS REQUIRED BY ITEM 316, BLADING MAY ALSO BE NECESSARY TO CLEAN DIRT AND GRASS FROM EDGES OF PAVEMENT AND TURNOUT AREAS. THE COST OF THIS BLADING WILL NOT BE PAID FOR DIRECTLY, BUT WILL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS OF THE PROJECT.

THE FINISHED SURFACE SHALL BE CLEARED OF ANY SURPLUS AGGREGATE BY THE CONTRACTOR BY SWEEPING OR OTHER APPROVED METHODS AFTER ALL ROLLING IS COMPLETED WHEN DIRECTED BY THE ENGINEER.

SANDSTONE AGGREGATES USED IN SEAL COAT, INCLUDING PRECOATED AGGREGATE, WILL BE SUBJECTED TO FOUR CYCLES OF THE SOUNDNESS TEST IN ACCORDANCE WITH TEST METHOD TEX-411-A. THE LOSS SHALL NOT BE GREATER THAN 30 PERCENT WHEN MAGNESIUM SULPHATE IS USED.

THE TYPE AND GRADE OF ASPHALT AND RATE OF APPLICATION SHALL BE AS DIRECTED BY THE ENGINEER. GENERALLY AN ASPHALT CEMENT WILL BE USED DURING THE WARM SEASON (USUALLY APRIL 15TH TO OCTOBER 1ST). GENERALLY AN EMULSIFIED ASPHALT WILL BE USED DURING THE COOLER SEASON (USUALLY OCTOBER 1ST TO APRIL 15TH). UNLESS OTHERWISE DIRECTED BY THE ENGINEER, THE EMULSIFIED ASPHALT SHALL BE HFRS-2.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 316 SEAL COAT, CONT'D

THE RATES OF APPLICATION AND THE ESTIMATED QUANTITIES OF AGGREGATE ARE BASED ON THE USUAL OR AVERAGE GRADATION OF KNOWN MATERIALS. PRIOR TO SHIPPING AGGREGATE TO THE PROJECT, THE CONTRACTOR SHALL FURNISH THE ENGINEER WITH SAMPLES OF AGGREGATE HE PROPOSES TO USE SO THAT THE GRADATION MAY BE DETERMINED AND RATE OF APPLICATION CHANGED IF NECESSARY. SURFACE TREATMENTS WITH UNHEATED AGGREGATE SHALL NOT BE APPLIED WHEN THE AIR TEMPERATURE IS BELOW 70 DEG. F AND IS FALLING, BUT IT MAY BE APPLIED WHEN THE AIR TEMPERATURE IS ABOVE 60 DEG. F AND IS RISING. ASPHALTIC MATERIAL MAY BE PLACED BY PREHEATING AGGREGATE TO 280 DEG. F WHEN THE AIR TEMPERATURE IS 70 DEG. F AND FALLING OR WHEN THE AIR TEMPERATURE IS 50 DEG. F AND RISING.

WHEN APPLYING SEAL COAT AT RAILROAD CROSSINGS, A STRIP OF PAPER SHALL BE PLACED OVER THE RAIL AND FLANGE AREAS ACROSS THE PAVEMENT.

ITEM 502 BARRICADES, SIGNS AND TRAFFIC HANDLING

THE CONTRACTOR'S ATTENTION IS CALLED TO SIGNS IN THE "TRAFFIC CONTROL DETAILS FOR SEAL COAT OPERATIONS" WHICH IS INCLUDED IN THE PLANS FOR THESE PROJECTS. THESE SIGNS ARE TO BE FURNISHED AND INSTALLED BY THE CONTRACTOR AND ARE TO REMAIN IN PLACE AFTER COMPLETION OF THE SEAL COAT OPERATION UNTIL STANDARD PAVEMENT MARKINGS ARE PLACED BUT NO LONGER THAN 3 DAYS. THESE SIGNS ARE IN addition TO THE SIGNS AND BARRICADES THAT MAY BE REQUIRED ON SHEETS BC (1-7)-82.

ITEM 506 TEMPORARY EROSION, SEDIMENT AND WATER POLLUTION CONTROL

THE SQUARE FOOTAGE REQUIREMENTS IN THIS SPECIFICATION ARE NOT APPLICABLE TO THIS PROJECT.

GENERAL NOTES

THE TRAFFIC CONTROL DEVICES DETAILED ON THIS SHEET WILL BE FURNISHED AND ERECTED AS DIRECTED BY THE ENGINEER ON SECTIONS OF HIGHWAY WHERE THE SEAL COAT OPERATION HAS COVERED OR OBLITERATED THE OLD MARKINGS. THESE TRAFFIC CONTROL DEVICES ARE TO BE USED TO SUPPLEMENT THOSE NORMALLY REQUIRED BY SHEETS BC(1)-(7).

NO-PASSING ZONE SIGNS

PRIOR TO THE BEGINNING OF CONSTRUCTION, ALL CURRENTLY STRIPED NO-PASSING ZONES SHOULD BE SIGNED WITH THE R4-1 DO NOT PASS AND R4-2 PASS WITH CARE SIGNS PLACED AT THE BEGINNING AND END OF EACH ZONE FOR EACH DIRECTION OF TRAVEL EXCEPT AS OTHERWISE PROVIDED HEREIN. SIGNS MARKING THESE INDIVIDUAL NO-PASSING ZONES NEED NOT BE COVERED PRIOR TO CONSTRUCTION SINCE SIGNS MAY SUPPLEMENT THE PAVEMENT MARKINGS.

AT THE DISCRETION OF THE ENGINEER, IN AREAS OF NUMEROUS NO-PASSING ZONES SEVERAL ZONES MAY BE COMBINED AND SIGNED AS A SINGLE ZONE. IF PASSING IS TO BE PROHIBITED OVER ONE OR MORE LENGTHY SECTIONS, A DO NOT PASS NEXT ( ) MILES SIGN MAY BE USED AT THE BEGINNING OF SUCH ZONES. IN AREAS WHEN THERE IS CONSIDERABLE DISTANCE BETWEEN NO-PASSING ZONES, THE END OF A NO-PASSING ZONE MAY BE SIGNED BY A PASS WITH CARE NEXT ( ) MILES SIGN DEPENDING ON TRAFFIC VOLUMES AND LENGTH OF SECTIONS. IT MAY BE DESIRABLE TO PROHIBIT PASSING THROUGHOUT THE PROJECT TO PREVENT DAMAGE TO WINDSHIELDS AND LIGHTS, THE DO NOT PASS NEXT ( ) MILES SIGN SUPPLEMENTED AS NECESSARY BY R4-1 SIGNS SHOULD BE USED FOR THIS PURPOSE WHERE SEVERAL EXISTING ZONES ARE TO BE COMBINED INTO ONE INDIVIDUAL NO-PASSING ZONE, THE SIGN AT THE BEGINNING OF THE ZONE SHOULD BE COVERED UNTIL THE SEALING OPERATION HAS PASSED THIS LOCATION SO AS NOT TO HAVE THE DO NOT PASS SIGN CONFLICT WITH EXISTING ZONES WHICH ARE STRIPED TO PERMIT PASSING. ALSO, UNLESS ONE DAY'S OPERATION COMPLETELY SEALS THE ENTIRE LENGTH OF SUCH COMBINED ZONES, CARE MUST BE TAKEN TO PLACE DO NOT PASS AND PASS WITH CARE SIGNS TO SIGN THE BEGINNING AND END OF NO-PASSING ZONES IN THE AREA WHERE THE SEAL COAT OPERATION ENDS FOR THE DAY.

THE R4-1 AND R4-2 SIGNS MAY BE MOUNTED ON TEMPORARY SUPPORTS A MINIMUM OF THREE (3) FEET ABOVE THE PAVEMENT EDGE. THESE SIGNS ARE TO REMAIN IN PLACE UNTIL STANDARD PAVEMENT MARKINGS ARE PLACED.

NO CENTER STRIPE SIGNS

AT THE TIME CONSTRUCTION ACTIVITY OBLITERATES THE CENTER STRIPE ON A ROADWAY WHERE THE CENTER STRIPE IS EXISTING (LOW VOLUME ROADS MAY NOT HAVE AN EXISTING CENTER STRIPE), SIGNS READING NO CENTER STRIPE SHOULD BE ERECTED AT EACH END OF THE WORK AREA AND JUST BEYOND MAJOR RURAL INTERSECTIONS AND OTHER LOCATIONS DEEMED NECESSARY BY THE ENGINEER. WHERE POSSIBLE, THE SIGNS ERECTED AT EACH END OF THE WORK AREA SHOULD BE LOCATED IN SUCH MANNER THAT DRIVERS CAN READ THE SIGN AND IMMEDIATELY SEE THE CHANGE FROM MARKED CENTER STRIPE TO NO CENTER STRIPE. THE NO CENTER STRIPE SIGN MAY BE SUPPLEMENTED WITH THE CW21-16 NEXT (X) MILES PLAQUE MOUNTED BELOW IT.

THE NO CENTER STRIPE SIGN MAY BE ERECTED ON A TEMPORARY SUPPORT A MINIMUM OF THREE (3) FEET ABOVE THE PAVEMENT EDGE. THESE SIGNS ARE TO REMAIN IN PLACE UNTIL STANDARD PAVEMENT MARKINGS ARE PLACED.

LOOSE GRAVEL SIGNS

WHEN CONSTRUCTION BEGINS, A CW8-7 LOOSE GRAVEL SIGN SHOULD BE ERECTED AT EACH END OF THE WORK AREA AND SUPPLEMENTED WITH THE CW8-7 LOOSE GRAVEL WARNING SIGN AT INTERVALS OF ABOUT ONE MILE IN RURAL AREAS AND CLOSER IN URBAN AREAS WHERE THAT CONDITION EXISTS. THE LOOSE GRAVEL SIGN MAY BE SUPPLEMENTED WITH THE CW21-16 NEXT (X) MILES PLAQUE MOUNTED BELOW IT.

THE CW8-7 LOOSE GRAVEL SIGNS AT EACH END OF THE WORK AREA AND THE CW8-7 LOOSE GRAVEL SIGNS ERECTED AT INTERVALS THROUGHOUT THE JOB MAY BE MOUNTED ON TEMPORARY SUPPORTS A MINIMUM OF THREE (3) FEET ABOVE THE PAVEMENT EDGE THEY SHOULD REMAIN IN PLACE UNTIL THE LOOSE GRAVEL CONDITION NO LONGER EXISTS.

CONSTRUCTION PAVEMENT MARKINGS

When required elsewhere in the plans, the Contractor will be responsible for maintaining pavement markings on all roadways that are open to traffic within the limits of the project. On projects involving roadway surfacing which will require pavement marking for control of traffic during construction, the markings may include both standard and abbreviated markings as defined below:

1. Standard Pavement Markings - Standard markings placed in conformance with the requirements of the Texas MUTCD. Such markings should be placed on all roadways open to traffic during construction, including new pavement, resurfacing, detours or other roadways where construction activities may have covered or obliterated existing markings. Standard markings should be placed as soon as possible and practical. When it is not practical or possible to place standard markings at the end of each day's work, abbreviated markings may be utilized for short periods until standard markings can be placed.

2. Abbreviated Pavement Markings - Abbreviated pavement markings are shorter in length than standard markings. The length and spacing of these markings shall be as specified elsewhere in the plans or specifications. Abbreviated pavement markings may be used to delineate lane continuity only until such time as standard markings can be placed. They are not intended to substitute for standard markings for periods greater than two (2) weeks. To separate traffic flows in opposing directions, the pavement markings shall be yellow. White pavement markings shall be used to delineate the separation of traffic flows in the same direction.

When abbreviated pavement markings are used, a DO NOT PASS sign shall be used to mark the beginning of the section where passing is to be prohibited and a PASS WITH CARE sign shall be used to mark the beginning of a section where passing is permitted.

REMOVAL OF PAVEMENT MARKINGS

Removal of Pavement Markings - includes centerline, barrier lines, lane lines, edge lines, and raised pavement markings.

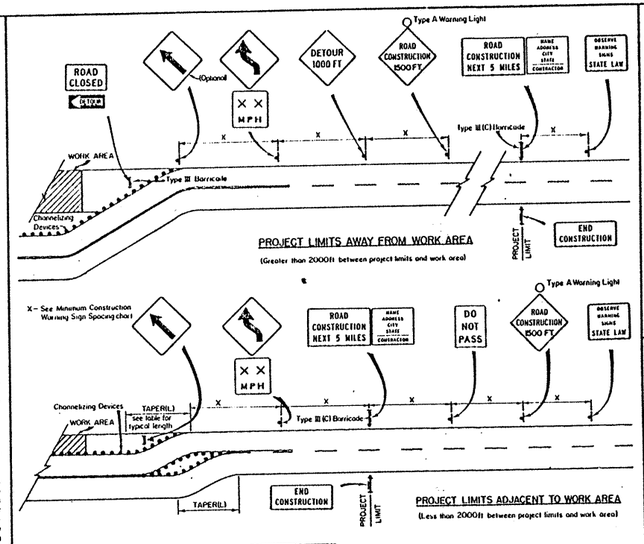
Immediately upon opening a detour to traffic, any pavement markings on the existing original roadway in the detour transition area that are no longer applicable and which may create confusion or direct a motorist toward or into the closed portion of the roadway, shall be removed or obliterated. In addition, when a detour is to be discontinued any pavement markings used to transition traffic into the detour which may create confusion or direct a motorist into the discontinued detour shall likewise be removed or obliterated. The above shall not apply to detours of a short time duration of a few hours where flagmen or sufficient channelizing devices are used to outline the detour route and the detour is not to be maintained overnight.

The removal of pavement markings shall be an integral part of establishing the detour. Detours shall be planned and scheduled well enough in advance to allow adequate time to complete all phases of the operation prior to darkness. If inclement weather or darkness becomes a factor, it will be the contractors decision to continue with the detour operation or retain the existing traveleway open to traffic when any or all of the requirements of the detour cannot be accomplished.

Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking, by any method that does not materially damage the surface or texture of the pavement. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used. Sandblasting may be used but will not be required unless specifically shown in the plans. Over painting of the marking will not be permitted. Removal of raised pavement markings shall be as directed by the Engineer.

Where mechanical means of marking removal have been employed to completely remove the marking and its reflectivity, paint of a color matching the pavement surface or used crankcase oil may be employed if necessary as a means of covering contrasting pavement texture. Nighttime inspections are needed to verify the continued effectiveness of the change.

Pavement markings to be removed shall be as shown in the plans or as directed by the Engineer. Removal of pavement markings will be considered subsidiary to the item BARRICADES, SIGNS AND TRAFFIC HANDLING. Any sandblasting required by the plans for marking removal shall be measured and paid for as a bid item in the contract.



Project Limit
Traffic Control Devices

GENERAL NOTES

1. As detailed above and on sheet BC(2), the ROAD CONSTRUCTION NEXT X MILES, CONTRACTOR NAME and END CONSTRUCTION signs shall be erected on Type III(C) Barricades at or near the project limits and the OBSERVE WARNING SIGNS STATE LAW sign shall be erected in advance of the Type III(C) Barricades.
2. Appropriate standard traffic control devices shall be used within the project limits to adequately warn, advise, control and guide traffic around and/or through all areas of work activity, detours and other such hazardous locations.
3. As a general rule, additional traffic control devices in advance of the project limits should only be used in those cases where a work area, a detour, or a hazardous location is less than 2,000 feet inside of the project limits.
4. Duplicate construction warning signs should be erected on the median side of divided highways where median width will permit and traffic density justifies the signing.
5. Except for devices required by Note 1, traffic control devices should be in place only while work is actually in progress or a definite need exists such as for detours and hazards, otherwise, they should be removed or covered.
6. The traffic control devices used in the above illustrations are examples only. Field conditions should dictate the most appropriate traffic control devices to be used within a construction project.

SPECIAL NOTES

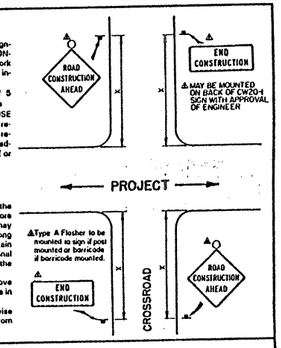
1. The ROAD CONSTRUCTION NEXT X MILES (← OR →) sign should be erected on the intersected highway as detailed above.
2. On the intersected highway, additional traffic control devices, such as a flagman and accompanying signs or other signs, should be used when work is being performed at or near the intersection.

CROSSROAD SIGNING AND BARRICADING

Except as noted below or elsewhere in the plans, the minimum signing on a crossroad approach should be one CW20-1 ROAD CONSTRUCTION AHEAD sign with a Type A Warning Light when work is actually in progress or a hazard exists in the vicinity of the intersection. Where speeds and volumes are relatively low the MCW 20 may be used, provided that a minimum letter size of 5 inches can be accommodated on this size with the appropriate legend. Additional signs such as FLAGMAN AHEAD, LOOSE GRAVEL, or other appropriate signs may be required, and when required, such signs will be considered part of the minimum requirements. When Type III Barricades are used on the project roadway, where practical, it is desirable that they be placed 30 feet or more from the crossroad:

EXCEPTIONS - TO BE NOTED ELSEWHERE IN THE PLANS

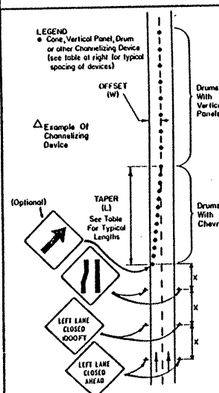
1. On higher volume crossroads or where major construction in the intersection area may require more than normal warning, more signing and barricading than the minimum specified above may be required. In some cases the Type III (C) Barricade plan along with the advance signing may be required during all or certain sequences of the work. However, unless the need for additional signs and/or barricades is noted elsewhere in the plans, the minimum requirements specified above will prevail.
2. On low volume crossroads the minimum signing required above may be omitted or modified if exceptions are noted elsewhere in the plans.
3. The G20-1c may be required on major crossroads to advise motorists of the length of construction in either direction from the intersection.



MINIMUM CONSTRUCTION WARNING SIGN SPACING

POSTED SPEED OR 85% SPEED	30 or less	35	40	45	50	55	MPH
X MINIMUM DISTANCE (FT.)	80	120	160	240	320	500	

⚠ For roads with a 55 MPH posted speed limit, advance warning signs should be placed approximately 1,500 feet in advance of the condition to which they are calling attention. Where a series of advance warning signs are used, the warning sign nearest the work site should be placed approximately 500 feet from the point of restriction with the additional signs at approximately 500-1000 foot intervals.



TYPICAL TRANSITION FOR SHORT DURATION LANE CLOSURE

For Long Duration Lane Closure, Pavement Markings In The Transition Area Shall Be Removed.

TYPICAL TRANSITION LENGTHS AND SUGGESTED MAXIMUM SPACING OF CHANNELIZING DEVICES

Posted Speed*	Formula	Minimum Desirable Taper Lengths** 10' Offset	11' Offset	12' Offset	Suggested Maximum Spacing of Device On a Taper	On a Tangent
30	L=WS²/60	150'	165'	180'	30'	60'-75'
35		205'	225'	245'	35'	70'-90'
40		265'	295'	320'	40'	80'-100'
45	L=WS	450'	495'	540'	45'	90'-110'
50		500'	550'	600'	50'	100'-125'
55		550'	605'	660'	55'	110'-140'
60		600'	660'	720'	60'	120'-150'

*85th Percentile Speed may be used on roads where traffic speeds normally exceed the posted speed limit.

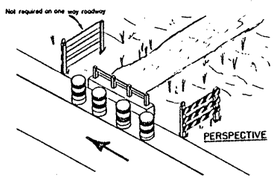
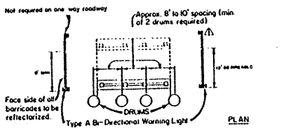
TYPE III (A) BARRICADE

1. The plan shown above is to be used when local traffic is permitted inside project or permitted to use the road beyond the intersection with the temporary route. Other signs and barricades (Type I, II or III) may be required inside the project limits based upon the contractor's sequence of work and other conditions.
2. Where conditions will permit, minimum length of barricade on each side of roadway should be 12 feet.
3. First barricade panel on each side of roadway should be approximately level. Additional panels, if needed, may follow contour of right-of-way.
4. Advance signing, including construction warning signs, and detour signing shall be as specified elsewhere in the plans.

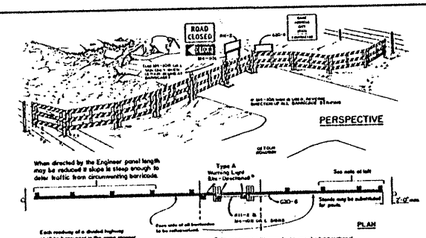




⚠ Extend barricade on side of approaching traffic if crown width makes it necessary.

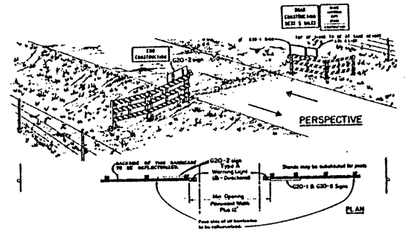
TYPE III (D) BARRICADE
FOR CULVERT WIDENING SITE WITHIN THE PROJECT LIMITS

NOTES:
1. Where positive redirectional capability is provided, drums and barricades may be omitted.
2. On streets or roads with posted speeds of 35 MPH or less, Type III Barricades may be used in lieu of barrels where necessary for pedestrian safety.

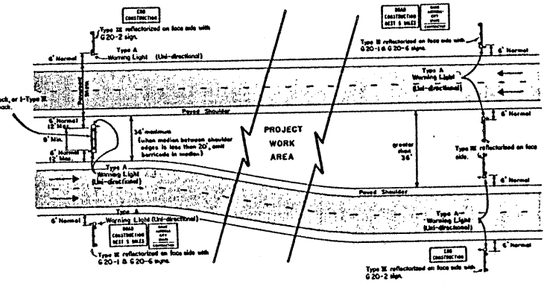


TYPE III(B) BARRICADE

1. The plan shown above is to be used when no local traffic is permitted inside the project. Contractor may locate his access gate anywhere in barricade except at center of roadway where R11-2 and M4-10 signs must be mounted on fixed barricade section.
2. Advance signing, including construction warning signs, and detour signing shall be as specified elsewhere in the plans.



TYPE III(C) BARRICADE FOR TWO WAY UNDIVIDED ROADWAY



TYPE III(C) BARRICADE FOR DIVIDED HIGHWAYS

NOTES FOR TYPE III (C) BARRICADES

1. The plans shown above are to be used when all traffic is maintained through the project. The signs shown apply to the first and last barricades of a project. Other signs and barricades (Types I, II or III) will be required inside the project limits based upon the contractor's sequence of work and other conditions.
2. Where conditions will permit, minimum length of barricade on each side of roadway should be 12 feet except as noted.
3. First barricade panel on each side of roadway should be approximate level. Additional panels, if needed, may follow contour of right-of-way.

GENERAL NOTES FOR TYPES I, II & III BARRICADES

Type I or II Barricades (see Sheet BC(3)) are for temporary use to control traffic within the limits of a project whenever it is necessary to confine traffic to a specific area because of some particular construction operation. Type I Barricades would normally be used on conventional roads or urban streets and arterials. As Type II Barricades have more reflective area, they are intended for use on expressway and freeways or other high speed roadways.

Type III(A) Barricades and accompanying signs are to be used at each end of construction projects closed to all but local traffic.

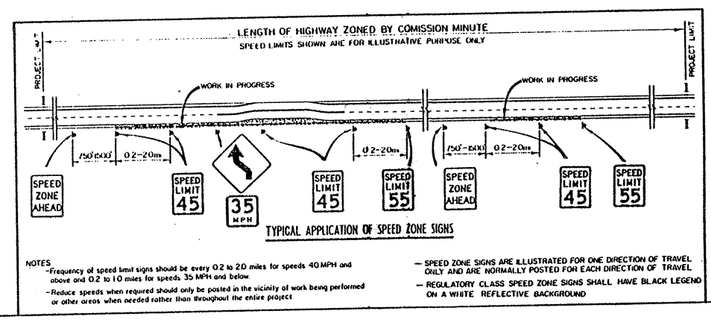
Type III(B) Barricades and accompanying signs are to be used at each end of construction projects closed to all traffic.

Type III(C) Barricades and accompanying signs are to be used at each end of construction projects where traffic is maintained through the project. Type III(C) Barricades may also be used where traffic from other highways, county roads or city streets is permitted to enter the project area. Typical signing for Type III(C) Barricades in shown on Sheet BC(1).

Type III(D) Barricades are to be used on culvert widening projects where traffic is routed over the structure. They shall be erected so as to provide the maximum roadway width for traffic and to allow sufficient space for construction operations behind the barricades.

Warning Lights placed on Type III(A), (B) or (C) barricades should be mounted at a minimum height of 36 inches to the bottom of the lens and may be attached to the barricade or mounted on a separate channelizing device. Barricades used at each end of the project shall be supplemented with warning lights as detailed on this sheet. For all other barricades, used at night, warning lights are to be used as detailed on Sheet BC(3).

For dimensions of barricade panels see Sheet BC(3).



TYPICAL APPLICATION OF SPEED ZONE SIGNS

NOTES
- Frequency of speed limit signs should be every 0.2 to 2.0 miles for speeds 40 MPH and above and 0.2 to 1.0 miles for speeds 35 MPH and below.
- Reduce speeds when required should only be posted in the vicinity of work being performed or other areas when needed rather than throughout the entire project
- SPEED ZONE SIGNS ARE ILLUSTRATED FOR ONE DIRECTION OF TRAVEL ONLY AND ARE NORMALLY POSTED FOR EACH DIRECTION OF TRAVEL.
- REGULATORY CLASS SPEED ZONE SIGNS SHALL HAVE BLACK LEGEND ON A WHITE REFLECTIVE BACKGROUND

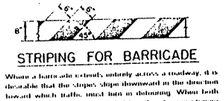
NOTES

1. All pipe shall be polyvinyl Chloride (PVC) pressure rated pipe SDR 21 or SDR 26 ASTM D2241.
2. Joint fittings may be PVC ASTM D2665 or Acrylonitrile Butadiene Styrene (ABS) ASTM D2661 (Drainage Waste and Vent)
3. All pipe and fittings shall be white
4. All joints shall be free to separate upon vehicle impact
5. Shaded conduit to be tied together with rope threaded into pipe interior Use 3-16" No 6 solid braided nylon or equivalent
6. A fixed trangible pavement connection is preferred Sand Bags may be substituted

OPTIONAL
TYPE III PVC BARRICADES
TYPICAL DESIGN DETAILS

May be used at the option of the Contractor



STRIPING FOR BARRICADE

Where a barricade entirely entirely across a roadway, it is desirable that the stripes slope downward in the direction toward which traffic must turn in obtaining. When both right and left turns are provided for, the chevron striping may slope downward in both directions from the center of the barricade

Striping should cover the full width of the rail Striping of rails, panels and gates for the right side of the roadway is shown above For the left side of the roadway, striping should slope downward to the right

For all types of barricades with rails less than 3' 0" long, stripes 4" wide shall be used.

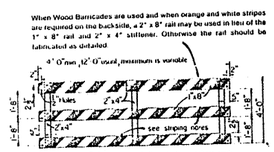
The 8" rail width is a nominal dimension for rails made of lumber.

Identification markings may be shown only on back side of barricade rails.

BARRICADE DETAILS

All lumber sizes are nominal dimensions
Fabrication Details ± 1/2"

When Wood Barricades are used and when orange and white stripes are required on the backside, a 2" x 8" rail may be used in lieu of the 1" x 8" rail and 2" x 4" stiffener. Otherwise the rail should be fabricated as detailed



PANEL FOR TYPE III BARRICADE

BARRICADE NOTES

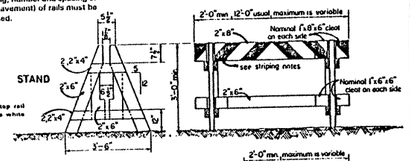
Channelizing devices other than barricades should normally be used for channelization purposes.

Barricades should normally be placed perpendicular to the traffic flow. Other channelizing devices, such as drums, vertical panels or portable barriers, should be used where needed to separate traffic from the work area. In all cases, the barricades should be so located as to most advantageously warn and direct traffic.

Barricades may be designed and constructed from wood, PVC pipe or any other suitable material in a manner approved by the Engineer. The construction details shown hereon are typical and are suggested details for wood and PVC pipe support systems for barricades. The details of rail width and striping, number and spacing of rails, minimum length and height (above pavement) of rails must be adhered to when alternate designs are used.

TYPE I BARRICADE

For Type I Barricades, both sides of the top rail shall have reflective orange and reflective white striping.



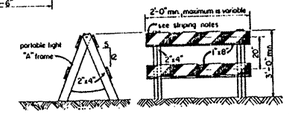
When signs are placed on barricades, a maximum number of 2 signs should be visable to the motorist.

Barricades are to be constructed in a first-class workmanship manner of clean sound material. All surfaces above ground, which are not striped, shall be white except the unpainted galvanized metal or aluminum components may be used. Components made of lumber shall be painted with a minimum of two coats of an approved brand of white paint to secure thorough coverage and a uniform white color.

The Contractor shall maintain each barricade in a clean and good condition.
Barricades shall be removed upon completion of the work and/or the elimination of the hazard on any section.

TYPE II BARRICADE

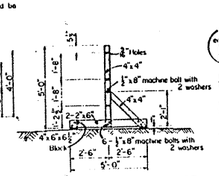
For Type II Barricades, all four (4) rail faces shall have reflective orange and reflective white striping.



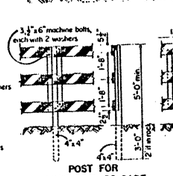
TYPE III BARRICADE

For Type III Barricades, the three (3) rails shall be reflective orange and reflective white stripes on one side of it is facing traffic, in one direction only, and on both sides if it serves traffic in two directions See Barricade Layouts on Sheet BC (2)

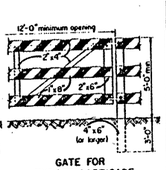
Use 1/4"x3 1/2" machine bolts with two washers each



STAND FOR TYPE III BARRICADE



POST FOR TYPE III BARRICADE



GATE FOR TYPE III BARRICADE

GENERAL NOTES

REFLECTORIZATION

The reflectorized white and reflectorized orange stripes for barricades, drums and vertical panels shall be constructed of retroreflective sheeting in conformance with project specifications and shall be maintained to meet the appearance, color, and reflectivity requirements of those specifications.

WARNING LIGHTS

Warning lights are portable lens directed, enclosed lights. The color of the light emitted shall be yellow. The lights should be mounted at a minimum height of 36 inches to the bottom of the lens.

Type A Low Intensity Flashing Warning Lights are commonly mounted on barricades, other channelization, devices or advance warning signs and are intended to warn the driver that he is approaching a hazardous area. Their use shall be as specified elsewhere in the plans, on Sheets BC(1) and BC(2), or as directed by the Engineer.

Type B High Intensity Flashing Warning Lights are normally used at or approaching extremely hazardous site conditions within the construction area. They may be mounted on barricades, signs or other supports. As these lights are effective in daylight as well as dark, they are designed to operate 24 hours per day. Their use should be specified elsewhere in the plans or as directed by the Engineer. Flashing warning lights shall not be used in a series.

Type C Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control devices used to delineate the edge of the traveled way on detour curves, lane changes, lane closures, shoulder drop-offs and other similar conditions or hazards. The series of Steady Burn Lights should have a Type B High Intensity Flashing Warning Light at the beginning and end of the series to mark the hazard. Where Steady Burn Lights are to be used for delineation, the Contractor may at his option, utilize delineators.

Contractors shall furnish a copy of a certification from the manufacturer of the lights that the warning lights meet the requirements of the ITE Standard For Flashing and Steady Burn Warning Lights as contained in the latest edition of the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

DELINEATORS

Delineators are normally used to indicate roadway alignment where improved nighttime visibility is needed but other roadway features are sufficient for daytime alignment. They should generally be used on high fills and horizontal and vertical curves where only nighttime delineation is needed. Delineators, when required for temporary use to control traffic through construction areas, will be considered subsidiary to the item BARRICADES, SIGNS AND TRAFFIC HANDLING. Delineators shall meet the material requirements of the project specifications. When used, delineators on the right side of the roadway facing traffic shall be white. The color of delineators used along the left edge of divided streets and highways and one-way roadways shall be yellow.

SPACING OF DELINEATORS

Spacing of Delineators on curves should be according to the Table below Spacing of delineators on tangent sections should normally be between 100 and 200 feet with the closer spacing for lower speeds and greater spacing for higher speeds.

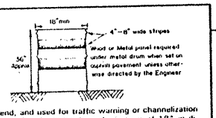
RADIUS OF CURVE (FEET)	60	150	200	250	300	400	500	600	700	800	900	1000
APPROX. SPACING ON CURVE (FEET)	20	30	35	40	50	55	65	70	75	80	85	90

CONES

Traffic cones and tubular markers shall be a minimum of 18 inches in height with a broadened base and may be made of various materials to withstand impact without damage to themselves or to vehicles. Larger sizes should be used on freeways and other roadways where speeds are relatively high or wherever more conspicuous guidance is needed. Orange shall be the predominant color on cones and tubular markers. They should be kept clean and bright for maximum target value. For nighttime use they shall be reflectorized or equipped with lighting devices for maximum visibility Reflectorized material shall have a smooth, sealed outer surface which will display the same approximate color day and night.

Reflectorization of tubular markers shall be a minimum of two three-inch bands placed a maximum of 2" from the top with a maximum of 6" between the bands. Reflectorization of cones shall be provided by a minimum 6" band placed a maximum of 3" from the top.

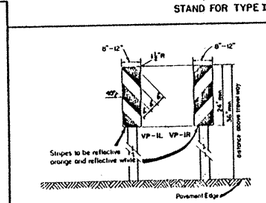
Cones or tubular markers are generally only suitable for temporary usage (up to 8 hours) with other channelization devices such as vertical panels or barricades preferred for longer term usage Care should be taken to insure that they remain in their proper location and in an upright position.



DRUMS

Drums, set on end, and used for traffic warning or channelization shall be approximately 36" in height and minimum of 18" in diameter. The contractor, at his option, may use drums made from steel barrels or black polyethylene plastic drum liners weighted appropriately and/or properly anchored. The markings on drums shall be horizontal, circumferential, reflectorized orange and reflectorized white stripes, 4 to 6 inches wide. The first reflectorized stripe should start within two (2) inches of the top of the drum. There shall be at least two orange and two white stripes on each drum. If there are non reflectorized spaces between the horizontal orange and white stripes, they shall be no more than 2 inches wide. Metal drums shall be painted black or orange before reflectorized stripes are added. All drums on a project will be the same color. When drums are placed in the roadway, appropriate warning signs should be used. During hours of darkness, a flashing warning light should be placed on drums used singly as a warning device. Steady burn electric lights or delineators should be placed on drums used in series for traffic channelization. Drums should not be weighted with sand, water or other material to the extent that it would make the drums dangerous to motorists.

CW1 8 CHEVRON signs, CW1 6A ARROW signs or VP 1 Vertical Panels mounted above drums may be used as supplements to drum delineation.

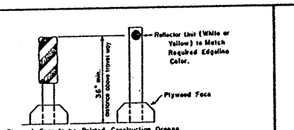


VERTICAL PANELS (VP)

Vertical Panels are normally used as channelizing devices to indicate tangent or nearly tangent roadway alignment where good target value of a device is needed in daytime as well as the nighttime. In addition, vertical panels should be used at the edge of shoulder drop offs and other areas such as lane transitions where positive day and night delineation may be required. Vertical panels should be mounted back to back if used at the edge of cuts adjacent to two-way two lane roadways. Stripes should always slope downward toward the traveled way.

CHANNELIZING DEVICES

The Type or Types of Channelizing Devices used are to be as specified by the Engineer.



TYPICAL PORTABLE VERTICAL PANEL OR DELINEATOR

Other similar supports may be used when approved or directed by the Engineer.

CONSTRUCTION SIGN NOTES

Construction signs shall be made from wood or metal. The designation of metal and wood as primary materials for signs shall not be interpreted to exclude other suitable rigid materials now or hereafter available

Wood for signs shall be waterproof resinbonded exterior grade plywood, Douglas Fir Plywood Association, or equal, of minimum 1/2 inch thickness. All wood signs made up of 2 or more pieces shall have one or more cleats, 1/2 inch by 6 inch plywood fastened to the back of the sign and extending fully across the sign. On plywood signs cleats shall be used as splice plates running the length of the joints. In localities where untreated wood rots rapidly, it is recommended that wood used for signs be treated either with chromated zinc chloride, Wolman salts, or pentachlorophenol

Aluminum sign blanks shall have a minimum thickness of 0.080". Steel sign blanks shall have a minimum thickness of 14 gauge

On secondary roads or city streets where speeds are low, smaller size construction warning signs may be used with the approval of the Engineer and if the sign size is in accordance with the "Typical Construction Warning Sign Size and Spacing Chart" shown on page 6B.2.2 of the Texas MUTCD

Reflectorized signs shall be constructed of retro-reflective sheeting and shall be maintained to meet the requirements for appearance, color and retro reflectivity of the project specifications. Signs shall comply with the general requirements specified in the "Standard Specifications for Construction of Highways, Streets and Bridges" in effect at the time of contract award.

All sign lettering shall be clear, open rounded type capital letters as approved by the National Committee on Uniform Traffic Control Devices and its sponsoring agencies, and as published by the Federal Highway Administration. Signs and lettering shall be of first class workmanship equivalent to that of the Department's standard signs.

Standard signs shall be used as required by Sheets BC(1) thru BC(7), the plans, or as directed by the Engineer to regulate, warn, and guide traffic. All sign erection and usage shall be in strict accordance with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways." The Contractor shall maintain each sign in a clean and good condition.

Signs shall be removed upon completion of the work.

Signs may be erected on portable, temporary, or fixed supports, for use on construction projects to warn or guide the traffic through and/or around the actual construction area. However, at the end of the workday if the signs do not warn or regulate traffic relative to night time roadway conditions or whenever the specific danger of which the particular sign warns has ceased to exist, the signs shall be either removed, turned away from the view of any traffic or covered. When signs are turned away from the view of any traffic the sign shall not be turned 90° to the direction of traffic and on two-way roadways or expressways or freeways with medians less than 12' (when the sign is installed in the median area) the sign shall not be turned 180° to the direction of traffic. When signs are covered the material used shall be opaque such as heavy mill black plastic. Burlap shall not be used to cover signs.

Signs erected on portable supports for use on construction projects normally mean signs which are used during the day to warn or guide traffic through and/or around the actual construction area, but at the end of the workday such signs are either removed or turned away from the view of traffic. Portable supports shall be as shown on this sheet or as approved by the Engineer. The bottom of the sign shall be a minimum of one (1) foot above the pavement edge. Signs required for nighttime usage should not normally be mounted on portable supports, except when approved by the Engineer.

Signs erected on fixed supports for use on construction projects normally mean signs that are to remain in place for both day and night usage to regulate, warn and guide traffic in advance of and within the limits of the project including the crossroad approaches. However, under certain conditions, such as where a sign may be required for a few days duration and then is no longer needed or where a sign is moved from location to location every few days or where it is not practical or desirable to provide a fixed mounting, such signs may be erected on a temporary type of support. Temporary supports shall be as shown on this sheet or as approved by the Engineer. Signs erected on temporary supports should be at a minimum height of 5 feet. Signs erected on fixed supports should be at a minimum height of five (5) feet in rural areas, and seven (7) feet in urban areas and other rural locations where sight distance obstructions are present. Regardless of the type of support used, regulatory signs should not be erected at height less than the 5 or 7 foot minimum specified above unless a lower height is approved by the Engineer. Posts for fixed supports should be set in the ground without concrete footings.

Wood sign post supports shall be painted white.

Where portable or temporary supports require the use of weights to keep a sign or barricade from turning over, the use of some type of sandbag is recommended. The use of pieces of concrete, rocks, iron, steel or other solid objects will not be permitted.

All traffic control devices shall conform with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

Contractors may use either the sign designs shown on sheets BC(4), BC(5), BC(6) and BC(7) or those sign designs shown in the U.S. Department of Transportation's latest edition of "Standard Highway Signs," when the required sign is illustrated in the "Standard Highway Signs" book. All construction type signs provided for in "PART VI" of the Texas MUTCD, but not detailed in the plans, may be used when so directed by the Engineer.

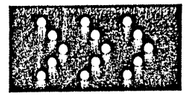
FLASHING ARROW PANEL



SEQUENCING ARROW PANEL

ADVANCE WARNING FLASHING OR SEQUENCING ARROW PANELS

The Advance Warning Flashing Arrow and Sequencing Arrow Panels are intended to supplement existing traffic control devices. They provide additional advance warning and directional information to assist in diverting and controlling traffic around construction or maintenance activities being conducted on or adjacent to the traveled way.

The Advance Warning Arrow Panel may be used for day or night closures, slow moving maintenance or construction activities on the traveled way, or extremely hazardous high density and speed conditions

Necessary signs, barricades or other traffic control devices should be used in conjunction with the Advance Warning Arrow Panel.

Arrow panels should have the capability of the following mode selections: Left Arrow, Right Arrow, Left and Right Arrow and caution The caution mode consists of four or more lamps, arranged in a pattern which will not indicate a direction.

Arrow panels shall be capable of minimum 50 percent dimming from rated lamp voltage. The flashing rate of the lamps shall not be less than 25 times per minute.

REQUIREMENTS

TYPE	MINIMUM SIZE	MINIMUM NUMBER OF PANEL LAMPS	MINIMUM VISIBILITY DISTANCE
B	30" x 54"	13	¼ mile
C	48" x 96"	15	1 mile

The panels shall be mounted on a vehicle, trailer or other suitable support

2

F.R. DIV.6	TEXAS	IR 35-1(52)000	SHEET 3
WEBB	COUNTY	HWY IH 35	CONT 0010-3-31,ETC

GENERAL NOTES AND SPECIFICATION DATA--

---ITEM 416 DRILLED SHAFT FOUNDATIONS---

THE CONTRACTOR SHALL PROBE BEFORE DRILLING FOUNDATIONS TO DETERMINE THE LOCATIONS OF ALL UNDERGROUND UTILITIES AND STRUCTURES.

---ITEMS 420-421 CONCRETE STRUCTURES AND CONCRETE FOR STRUCTURES---

THE ENGINEER WILL SAMPLE ALL CONCRETE AND MAKE AND TEST ALL TEST BEAMS AND CYLINDERS IN ACCORDANCE WITH TEST METHODS TEX-418-A AND TEX-420-A. THE CONTRACTOR SHALL FURNISH AND PROPERLY MAINTAIN ALL TEST MOLDS. THE TEST MOLDS SHALL MEET THE REQUIREMENTS OF TEST METHODS TEX-418-A AND TEX-420-A AND, IN THE OPINION OF THE ENGINEER, SHALL BE SATISFACTORY FOR USE AT THE TIME OF USE. IN ADDITION, THE CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING PERSONNEL TO REMOVE THE TEST SPECIMENS FROM THE MOLDS AND TO TRANSPORT THEM TO THE PROPER CURING LOCATION AT THE SCHEDULE DESIGNATED BY THE ENGINEER AND IN ACCORDANCE WITH THE GOVERNING SPECIFICATION. FOR ALL CONCRETE ITEMS, THE CONTRACTOR SHALL HAVE A WHEELBARROW OR OTHER CONTAINER ACCEPTABLE TO THE ENGINEER AVAILABLE TO USE IN THE SAMPLING OF THE CONCRETE. ALL LABOR AND EQUIPMENT FURNISHED BY THE CONTRACTOR WILL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS AND WILL NOT BE PAID FOR DIRECTLY.

---ITEM 427 SURFACE FINISHES FOR CONCRETE---

A GRADE III SURFACE FINISH WILL BE REQUIRED ON ALL CONCRETE STRUCTURES.

---ITEM 432 RIPRAP---

CONCRETE RIPRAP APRON USED AROUND LARGE SIGN LEGS SHALL BE 4" THICK. CONCRETE USED ON THIS RIPRAP SHALL BE CLASS "B" AND REINFORCING SHALL BE 6" X 6" - W3 X W3 (NO.6 GAUGE) WELDED WIRE FABRIC OR #3 BARS AT 18" C.C. UNLESS OTHERWISE SHOWN ON THE PLANS.

ALL EXCESS EXCAVATION RESULTING FROM THIS OPERATION SHALL BE SPREAD UNIFORMLY INSIDE THE RIGHT OF WAY AS DIRECTED BY THE ENGINEER AND SHALL BE INCLUDED IN THE BID PRICE OF THIS ITEM.

F.R. DIV.6	TEXAS	IR 35-1(52)000	SHEET 3
WEBB	COUNTY	HWY IH 35	CONT 0010-3-31,ETC

GENERAL NOTES AND SPECIFICATION DATA--

---ITEM 437 CONCRETE ADMIXTURES---

HIGH RANGE WATER REDUCERS WILL BE USED ONLY TO MEET SPECIAL REQUIREMENTS AND WILL REQUIRE THE WRITTEN APPROVAL OF THE ENGINEER ON EACH SPECIFIC PROJECT. A SATISFACTORY WORK PLAN FOR CONTROL SHALL BE SUBMITTED BY THE CONTRACTOR FOR APPROVAL AND AN EVALUATION OF THE CONCRETE CONTAINING THE ADMIXTURE WILL BE PERFORMED BY THE ENGINEER.

---ITEM 502 BARRICADES, SIGNS AND TRAFFIC HANDLING---

THE TRAFFIC CONTROL PLAN FOR THIS PROJECT SHALL BE AS DETAILED ON APPLICABLE BC (1) THRU (7)-89 STANDARDS, AND/OR AS PROVIDED FOR IN THE "1980 TEXAS MUTCD."

---ITEM 526 MEMBRANE CURING---

MEMBRANE CURING, TYPE 2 WILL BE REQUIRED.

---ITEMS 634 AND 636 PLYWOOD AND ALUMINUM SIGNS (TYPE A)---

ALL SIGNS SHALL BE INSTALLED IN ACCORDANCE WITH THE "1980 TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES."

ALL BRAND NEW SIGN INSTALLATIONS SHALL BE LOCATED IMMEDIATELY BEHIND THE EXISTING SIGNS THEY ARE REPLACING.

ANY DETAIL THAT CONFLICTS WITH THE STANDARD PLAN SHEETS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO CONSTRUCTION UNLESS A NOTE IS PLACED ADJACENT TO THE DETAIL TO INDICATE AN INTENTIONAL DEVIATION FROM THE STANDARD PLAN SHEETS.

---ITEM 648 ROADSIDE TRAFFIC SIGN SUPPORTS (STRUCTURAL STEEL)---

THE CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT THE LENGTHS OF THE POSTS FOR LARGE GROUND MOUNT SIGNS ARE APPROXIMATE. THE CONTRACTOR SHALL VERIFY EXISTING FIELD CONDITIONS TO DETERMINE THE REQUIRED LENGTHS OF THESE POSTS PRIOR TO ORDERING THE MATERIALS TO CONFORM WITH SPECIFIED SIGN MOUNTING HEIGHTS SHOWN IN THE PLANS.

F.R. DIV.6	TEXAS	IR 35-1(52)000	SHEET 3
WEBB	COUNTY	HWY IH 35	CONT 0010-3-31,ETC

GENERAL NOTES AND SPECIFICATION DATA--

---ITEM 6057 REMOVING EXISTING ROADSIDE TRAFFIC SIGNS---

THE CONTRACTOR SHALL REMOVE AND COMPLETELY DISASSEMBLE THE ENTIRE SIGN INSTALLATION, IN THE PROCESS SEPARATING THE SIGN POST AT THE CONCRETE FOUNDATION. ALL REMOVED SIGN MATERIAL SHALL BECOME THE PROPERTY OF THE CONTRACTOR. ALL MATERIAL REMOVED UNDER THIS ITEM MAY BE TEMPORARILY STOCKPILED BY THE CONTRACTOR WITHIN THE PROJECT LIMITS AS DIRECTED BY THE ENGINEER. THE MATERIAL SHALL BE DISPOSED OF BY HAULING IT OFF THE PROJECT SITE AND OUT OF SIGHT FROM STATE HIGHWAYS TO DISPOSAL SITES ARRANGED FOR BY THE CONTRACTOR AND SATISFACTORY TO THE ENGINEER. NO SIGNS SHALL BE REMOVED WITHOUT PRIOR APPROVAL OF THE ENGINEER.

---ITEM 6059 REMOVING EXISTING SIGN PANELS---

ALL MATERIAL REMOVED UNDER THIS ITEM SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND MAY BE STOCKPILED TEMPORARILY WITHIN THE PROJECT LIMITS AS DIRECTED BY THE ENGINEER. THE MATERIAL SHALL BE DISPOSED OF BY HAULING IT OFF THE PROJECT SITE AND OUT OF SIGHT FROM STATE HIGHWAYS TO DISPOSAL SITES ARRANGED FOR BY THE CONTRACTOR AND SATISFACTORY TO THE ENGINEER. NO SIGNS SHALL BE REMOVED WITHOUT PRIOR APPROVAL OF THE ENGINEER.

◒ THE "X" DIMENSION IS THE ELEVATION DIFFERENCE AT THE POST BETWEEN THE GROUND AND EDGE OF PAVEMENT OR TOP OF CURB.

GENERAL NOTES:

SIGNS SHOWN ON THIS SHEET ARE GENERALLY THOSE WITH REMOVABLE LEGEND TEXTS, ALTHOUGH SCREENED OR STICK-ON LEGEND SIGNS MAY ALSO BE SHOWN (SEE SIGN TYPE).

LENGTHS OF THE POSTS FOR LARGE GROUND MOUNT SIGNS ARE APPROXIMATE. THE CONTRACTOR SHALL VERIFY FIELD CONDITIONS TO DETERMINE THE REQUIRED LENGTHS OF THESE POSTS PRIOR TO ORDERING MATERIALS TO CONFORM WITH SPECIFIED SIGN MOUNTING HEIGHTS SHOWN IN THE PLANS.

⊛ CONTRACTOR MAY USE SCREENED LEGEND OR 6" TYPE D STICK-ON LETTERS.

REFLECTIVE SHEETING WILL BE DESIGNATED AS:
TYPE A= ENGINEER GRADE
TYPE B= SUPER ENGINEER GRADE
TYPE C= HIGH SPECIFIED INTENSITY

SPECIFICATION REFERANCE TABLE		
MATERIALS AND TEXT SPECIFICATIONS (D-9)		
PLYWOOD SIGN BLANKS	D-9-7100	
ALUMINUM SIGN BLANKS	D-9-7110	
WINGED CHANNEL POSTS	D-9-7130	
REFLECTIVE SHEETING, TYPE A	D-9-8300	(ENGINEER GRADE)
REFLECTORIZED REMOVABLE LEGEND	D-9-8400	

GENERAL NOTES FOR GUIDE SIGNS:

THE ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND NUMERALS SHALL CONFORM WITH THE TEXAS "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS", LATEST EDITION, AND ANY APPROVED CHANGES THERETO. LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

LEGEND AND BORDERS FOR GREEN AND BLUE BACKGROUND GUIDE SIGNS SHALL HAVE REFLECTORIZED REMOVABLE LEGEND WITH BORDERS CONFORMING WITH DEPARTMENT SPECIFICATION, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS. DIMENSIONS SHOWN FOR REMOVABLE BORDERS AND CORNER RADII ARE NOMINAL. REMOVABLE BORDERS MAY VARY IN WIDTH AS MUCH AS ONE-HALF INCH. CORNER RADII ABOVE THREE INCHES MAY VARY IN RADIUS PLUS OR MINUS ONE INCH. BORDERS AND CORNER RADII MUST BE OF MATCHING WIDTHS. THE SIGN AREA OUTSIDE THE CORNER RADIUS NEED NOT BE TRIMMED.

ROADSIDE MOUNTED GUIDE SIGNS SHALL BE MADE OF 5/8 INCH PLYWOOD (TYPE A) UNLESS OTHERWISE NOTED IN THE SIGN TABULATION. OVERHEAD GUIDE SIGN BLANKS SHALL BE MADE OF TYPE O ALUMINUM OR PLYWOOD AS SPECIFIED IN THE SIGN TABULATION. SIGNS AND PANELS ATTACHED ABOVE OR BELOW A PARENT SIGN SHALL BE MADE OF THE SAME MATERIAL AS THE PARENT SIGN.

MOUNTING DETAILS FOR ROADSIDE MOUNTED GUIDE SIGNS ARE SHOWN ON STANDARD PLAN SHEETS SMD SERIES. MOUNTING DETAILS FOR OVERHEAD SIGNS SHALL BE AS DETAILED ELSEWHERE IN PLANS OR THE SUPPLIER'S CHOICE SUBJECT TO APPROVAL BY THE ENGINEER.

GENERAL NOTES FOR SIGNS AND PANELS ON THIS SHEET:

SIGNS AND PANELS SHOWN ARE USUAL AND STANDARD SIZES. INDIVIDUAL PANEL SIZES MAY BE ADJUSTED DURING PLAN PREPARATION TO FIT ACTUAL PARENT SIGN SIZES WHERE NECESSARY. PANEL SIZES TO BE FURNISHED SHOULD BE AS DETAILED ELSEWHERE IN PLANS AND/OR AS SHOWN ON SIGN TABULATION. SIGNS AND PANELS ATTACHED ABOVE OR BELOW A PARENT SIGN SHALL BE MADE OF THE SAME MATERIAL AS THE PARENT SIGN. SEE STANDARD SHEET IM(2) FOR ARROW DIMENSION DETAILS.

LEGEND, BORDER AND BACKGROUND FOR D10 SIGNS SHALL BE REFLECTIVE MATERIAL. SIGN BLANKS SHALL BE ONE PIECE 0.080 INCH THICK SHEET ALUMINUM ALLOY CONFORMING WITH DEPARTMENT SPECIFICATION "ALUMINUM SIGNS (TYPE A)". D10 SIGNS ARE TO BE MOUNTED AS SHOWN.

LEGEND FOR R14-4 SHALL BE BLACK AND APPLIED BY SCREENING TO WHITE REFLECTIVE SHEETING CONFORMING WITH DEPARTMENT SPECIFICATION. SIGN BLANK SHALL BE 5/8 INCH THICK PLYWOOD (TYPE A) CONFORMING WITH DEPARTMENT SPECIFICATION, UNLESS OTHERWISE NOTED ELSEWHERE IN THE PLANS.

REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY) (FOR INTERSTATE ROUTE MARKERS)	D-9-8300

GENERAL NOTES:

THE ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND NUMERALS SHALL CONFORM WITH THE TEXAS "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS", LATEST EDITION, AND ANY APPROVED CHANGES THERETO. LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

LETTERS AND NUMERALS FOR U.S. AND STATE ROUTE MARKERS SHALL BE BLACK AND APPLIED BY SCREENING TO WHITE REFLECTIVE SHEETING CONFORMING TO DEPARTMENT SPECIFICATION.

INTERSTATE ROUTE MARKERS SHALL HAVE COLORED TRANSPARENT INK APPLIED BY THE REVERSE SCREEN PROCESS TO WHITE REFLECTIVE SHEETING CONFORMING TO DEPARTMENT SPECIFICATION.

SIGN BLANKS SHALL BE ONE PIECE 0.063 INCH THICK SHEET ALUMINUM ALLOY CONFORMING WITH DEPARTMENT SPECIFICATION "ALUMINUM SIGNS (TYPE A)".

SIGNS SHALL BE ATTACHED TO THE GUIDE SIGN AS DETAILED ON STANDARD SHEET IM(2).

SIGN HARDWARE	D-9-7120
REFLECTORIZED REMOVABLE LEGEND	D-9-8400

GENERAL NOTES:

1. ROUTE MARKERS ATTACHED TO GUIDE SIGNS SHALL BE TYPE A ALUMINUM, AS REQUIRED BY THE PLANS. SKETCHES SHOWN ARE EXAMPLES ONLY.
2. SCREWS OR BOLTS, NUTS AND WASHERS SHALL BE EITHER STAINLESS STEEL OR ALUMINUM.
3. THE SCREWS FOR PLYWOOD SIGNS SHALL NOT PROTRUDE THROUGH THE BACK OF THE SIGN. ALL HOLES REQUIRED IN THE PUNCHING DETAIL OF THE BLANK SHALL HAVE SCREWS OR NUTS AND BOLTS.
4. SCREWS AND WASHERS SHALL BE USED UNLESS OTHERWISE NOTED IN THE PLANS.

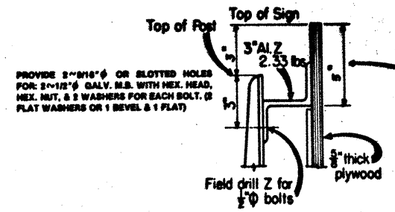
REAR VIEW



⚠1 APPROXIMATELY EQUAL SPACING FABRICATOR MAY VARY SPACING FOR LEAST INTERFERENCE WITH MESSAGE AND TO UTILIZE WIND BEAM FOR HORIZONTAL SPLICE PROVIDED NO WIND BEAM SPACING EXCEEDS THE MAXIMUM SHOWN IN THE TABLE. STAGGERED ARRANGEMENT OF HORIZONTAL SPLICES AS SHOWN IS PREFERRED. HOWEVER, A SINGLE HORIZONTAL JOINT ACROSS THE SIGN FACE IS PERMISSIBLE.

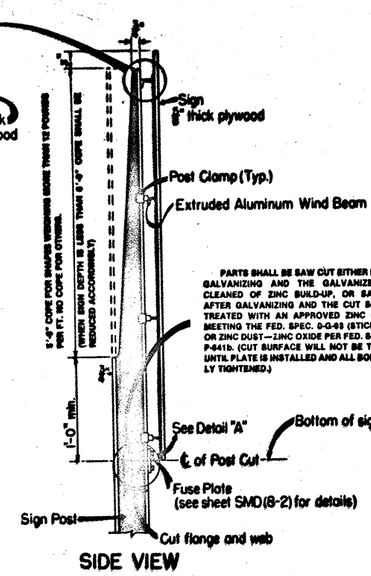
⚠2 FOR SIGNS 4'-0" OR LESS IN HEIGHT THE PLYWOOD PANEL MAY EXCEED 4'-0" IN WIDTH.

⚠3 EXTRUDED ALUMINUM WIND BEAMS (SEE SHEET SMD (8-2) FOR DETAIL) WIND BEAMS TO BE CONTINUOUS WITH NO SPLICES.

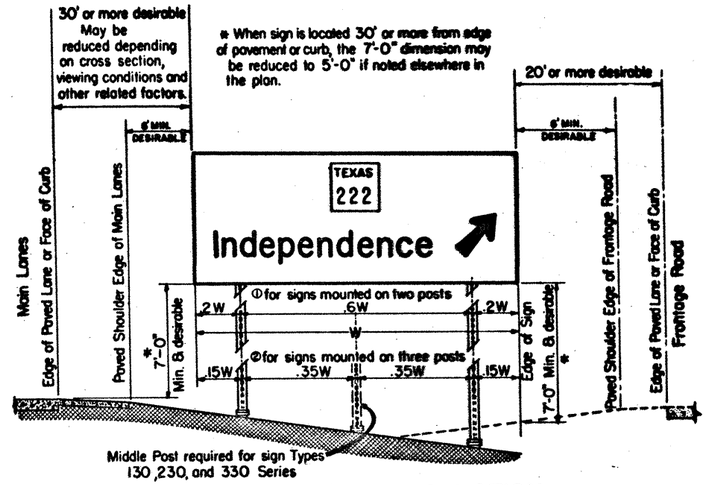
⚠4 ALUMINUM Z WILL BE PROVIDED UNLESS STATED OTHERWISE IN THE PLANS.

IF EXTRUDED ALUMINUM WIND BEAMS (SEE SHEET SMD (8-2) FOR DETAIL) ARE USED, THEY SHALL BE CONTINUOUS WITH NO SPLICES.

TYPICAL ASSEMBLY FOR GROUND MOUNTED GUIDE SIGNS



SIDE VIEW



TYPICAL SIGN INSTALLATION AND LOCATION

LATERAL CLEARANCE NOTES:
LATERAL CLEARANCES OF SIGNS MOUNTED ON MEDIAN SIDE OF MAIN LANES ARE THE SAME AS SHOWN ABOVE WHERE SPACE WILL PERMIT.

WHERE A SIGN IS TO BE LOCATED BEHIND GUARDRAIL, AN ALLOWABLE MINIMUM CLEARANCE OF TWO FEET MAY BE USED, MEASURED FROM THE FACE OF THE GUARDRAIL TO THE NEAR EDGE OF THE SIGN.

POST SPACING NOTES:
1 POST SPACINGS MAY BE VARIED A MAXIMUM OF PLUS 10% TO MINUS 10% OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.
2 POST SPACINGS MAY BE VARIED A MAXIMUM OF PLUS 5% OF TOTAL SIGN WIDTH TO FIT FIELD CONDITIONS.

NOTE:
1. A TOLERANCE OF PLUS OR MINUS 1/4 INCH WILL BE PERMITTED IN THE PLAN DIMENSIONS FOR FABRICATION OF EACH SINGLE INCREMENT SIGN PANEL WHEN NECESSARY FOR SQUARING. A TOLERANCE OF PLUS OR MINUS 1/4 INCH WILL BE PERMITTED FOR EACH INCREMENT OF A MULTI-INCREMENT SIGN PANEL WHERE NECESSARY TO SECURE SQUARE, TIGHT-FITTING JOINTS.
2. PLYWOOD BOLTS 5/16"x1 1/2" FLAT HEAD ELEVATOR TYPE STEEL BOLT WITH 3/4" MINIMUM THREAD LENGTH. THE HEAD SHALL HAVE A MINIMUM DIAMETER OF 3/4" AND SHALL HAVE A MINIMUM OF TWO FINS ON THE UNDERSIDE. EACH BOLT SHALL BE PROVIDED WITH ONE 5/16" STEEL HEX NUT, ONE 5/16" STEEL FLAT WASHER, AND ONE 5/16" STEEL LOCK WASHER. BOLTS, NUTS, AND WASHERS SHALL BE GALVANIZED AS PER ZINC SPECIFICATION OF ASTM B454.
3. SPLICE BARS SHALL BE SECURED WITH 5/8" LONG x NO. 10 ROUND HEAD, CADMIUM PLATED, BRASS WOOD SCREWS SPACED AT 6" MAXIMUM ALONG DOUBLE ROW SPACING WITH THE EXCEPTION AT EXTREME ENDS OF SPLICE BARS, ALONG OUTSIDE EDGE OF SIGN. WHERE PLYWOOD BOLTS SHALL BE USED AS SHOWN A MAXIMUM OF ONE HORIZONTAL JOINT PER VENTICAL SECTION WILL BE PERMITTED USING A 1/8" GAP BETWEEN PANELS.
4. SPLICES SHALL BE KEPT TO A MINIMUM. PANELS 4'x8' OR LARGER SHALL BE USED TO THE MAXIMUM EXTENT POSSIBLE IN THE FABRICATION OF ANY SIGN. SIGNS OR SIGN SECTIONS WHICH CANNOT BE FABRICATED FROM AT LEAST A 4'x8' PANEL SHALL BE OF ONE PIECE CONSTRUCTION.

SIGN COMPONENTS IN ASSEMBLY

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. ASSEMBLE POST TO STUB WITH BOLTS AND WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. SHIM AS REQUIRED TO PLUMB POST.
3. TIGHTEN ALL BOLTS THE MAXIMUM POSSIBLE WITH 12" TO 18" WRENCH TO BED WASHERS AND SHIMS AND TO CLEAN BOLT THREADS THEN LOOSEN EACH BOLT IN TURN AND RETIGHTEN IN A SYSTEMATIC ORDER TO THE PRESCRIBED TORQUE. (SEE TABLE)
4. BURR THREADS AT JUNCTION WITH NUT USING A CENTER PUNCH TO PREVENT NUT LOOSENING.

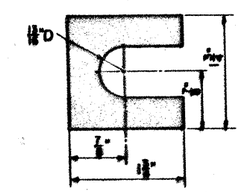
FUSE PLATE DETAIL

USE H.S. HEX HEAD BOLTS, HEX HEAD NUT AND BEVEL OR FLAT WASHER (WHERE REQ'D) UNDER NUT. ALL HOLES SHALL BE DRILLED. ALL PLATE CUTS SHALL PREFERABLY BE SAW CUTS, HOWEVER, FLAME CUTTING WILL BE PERMITTED PROVIDED ALL EDGES ARE GROUND. METAL PROJECTING BEYOND THE PLANE OF THE PLATE FACE WILL NOT BE PERMITTED. STEEL FUSE PLATES SHALL CONFORM TO THE REQUIREMENTS OF ASTM A36. ASTM A441, ASTM 572 GRADE 50, OR ASTM A588 MAY BE SUBSTITUTED FOR A36 AT THE OPTION OF THE FABRICATOR. STEEL USED SHALL HAVE AN ULTIMATE TENSILE STRENGTH NOT TO EXCEED 80 KSI.

NOTE: CENTERLINE OF HOLE FOR 3/8" DIAMETER SQUAREHEAD BOLT x 2 1/4" LONG WITH A FLAT WASHER AND SELF-LOCKING NUT, OR LOCK WASHER AND HEX NUT. BOLT HEAD DIMENSIONS SHALL BE IN ACCORDANCE WITH ANSI B 18.2.1 AS REFERRED TO IN THE AISC MANUAL OF STEEL CONSTRUCTION. BOLT ASSEMBLY SHALL BE GALVANIZED IN ACCORDANCE WITH ZINC SPECIFICATION OF ASTM B454.



SHIM DETAIL

FURNISH 2"±.012" THICK AND 2"±.032" THICK SHIMS PER POST. SHIMS SHALL BE FABRICATED FROM BRASS SHIM STOCK OR STRIP CONFORMING TO A.S.T.M. -B36.

For General Notes pertaining to this sheet see the General Notes on Standard Sheet SMD(8-1).

NUMBER PANEL MOUNTING DETAILS

NOTES:

1. NUMBER PANEL SHALL BE MOUNTED TO THE RIGHT HAND SIDE OF THE PARENT SIGN FOR RIGHT EXITS AND TO THE LEFT FOR LEFT HAND EXITS. THE NUMBER PANEL SHALL BE MOUNTED WITH TWO (2) UPRIGHTS SO THAT ITS RIGHT EDGE IS EVEN WITH THE RIGHT EDGE OF THE PARENT SIGN OR VICE-VERSA FOR LEFT HAND EXITS.
2. UPRIGHTS TO BE SYMMETRICAL ABOUT NUMBER PANEL ℄.
3. UPRIGHT TO BE OF STRUCTUAL STEEL, ASTM-A36, AND GALVANIZED AFTER FABRICATION OR ALUMINUM 6061-T6 OR 3" EXTRUDED ALUMINUM WINDBEAM AS DETAILED ON SMD (8-2).
4. ALL BOLTS, NUTS, AND WASHERS SHALL BE GALVANIZED AS PER THE ZINC SPECIFICATION OF ASTM B454.
5. WHEN SPLICE BARS ARE REQUIRED TO FABRICATE THE NUMBER PANEL, THE SPLICE BAR DETAIL AS SHOWN FOR THE PARENT SIGN ON SHEET SMD(8-1) IS TO BE USED. SPLICE BAR OR BARS ON NUMBER PANEL NEED NOT ALIGN WITH SPLICE BAR OR BARS ON PARENT SIGN.
6. POSTS, PARENT SIGN PANELS AND NUMBER PANELS SHALL COMPLY WITH NOTES ON SHEETS SMD(8-1) AND SMD(8-2).
7. SIGNS (SUCH AS EXIT NUMBER PANELS) ATTACHED ABOVE A PARENT SIGN SHALL BE MADE OF THE SAME TYPE OF MATERIAL AS THE PARENT SIGN.
8. UPRIGHTS AND OTHER CONNECTION HARDWARE REQUIRED TO FASTEN EXIT NUMBER PANEL TO PARENT SIGN SHALL BE SUBSIDIARY TO THE SIGN BLANK.

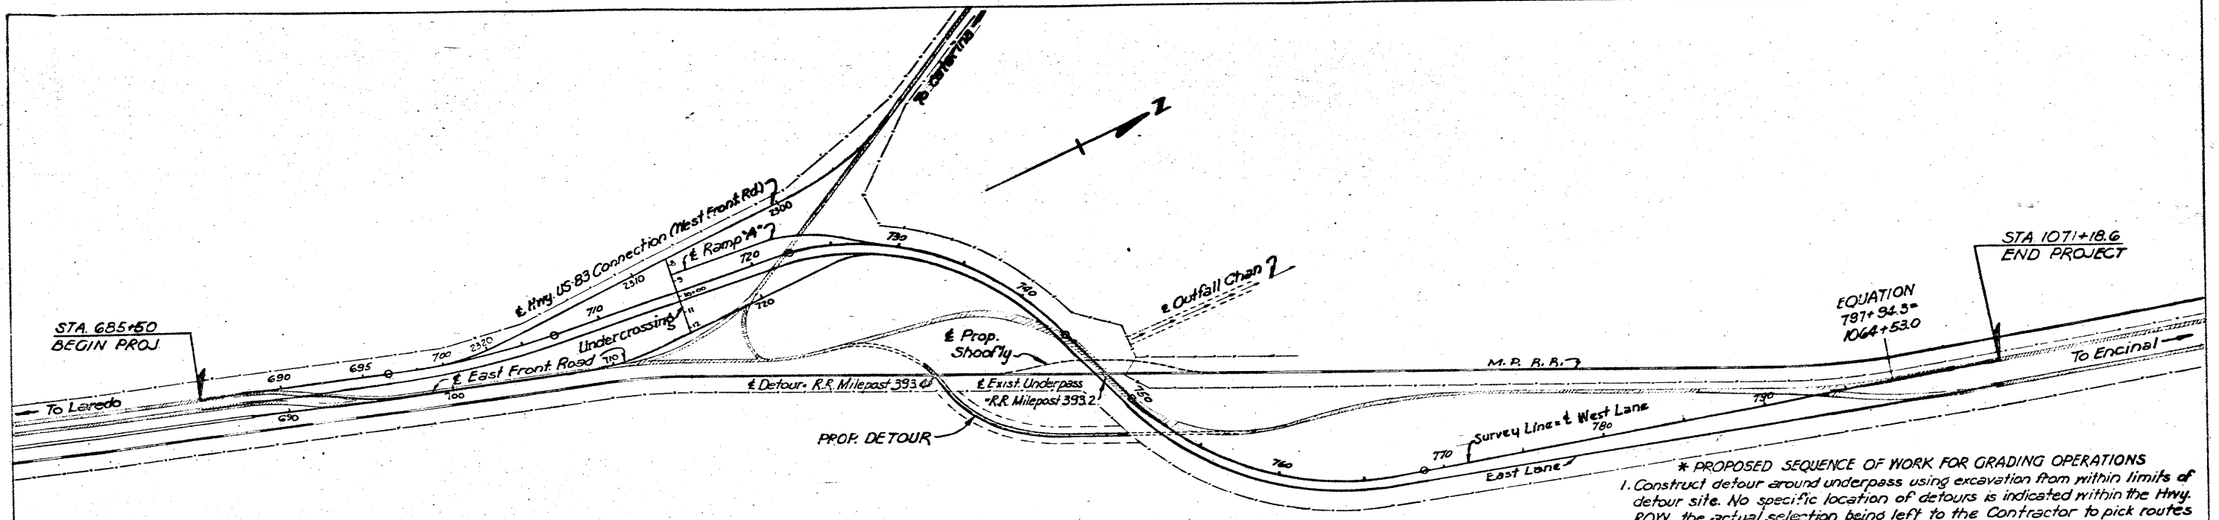
RECOMMENDED FOR APPROVAL: 12-3-58
APPROVED
BRIDGE ENGINEER
DISTRICT ENGINEER

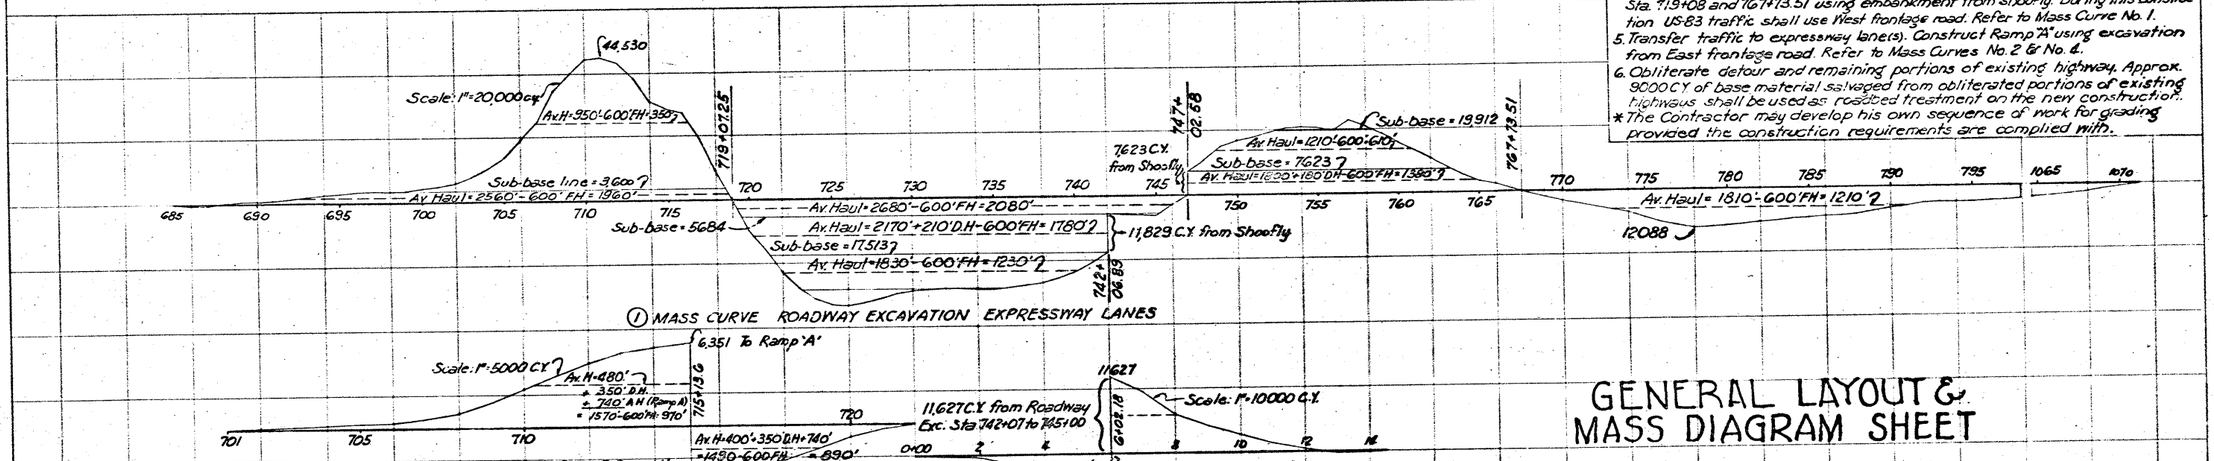
DEPARTMENT OF COMMERCE
BUREAU OF PUBLIC ROADS
APPROVED
DIVISION ENGINEER — DATE



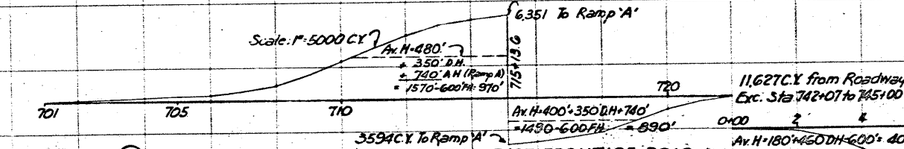
* PROPOSED SEQUENCE OF WORK FOR GRADING OPERATIONS

1. Construct detour around underpass using excavation from within limits of detour site. No specific location of detours is indicated within the Hwy. ROW, the actual selection being left to the Contractor to pick routes best suited to actual construction in progress. Two asphalt-surfaced lanes shall be available to traffic at all times throughout entire length of Proj. Approx. excavation quantities for detour (for estim. purposes) are 6000 C.Y.
2. Construct shoofly using excavation from channel left of Sta 747 and from roadway between Sta 742+07 and 745+00. Refer to Mass Curves No. 3 & No. 5.
3. Construct underpass & expressway lanes from: 685+00 to 719+08 & 767+73.51 to 1071+18.6. Complete West frontage road. During this construction traffic shall use existing facility except for detour around underpass, and, when necessary, around work at each end of project. Refer to Mass Curve No. 1.
4. After underpass is complete, finish construction of expressway lanes between Sta. 719+08 and 767+73.51 using embankment from shoofly. During this construction US-83 traffic shall use West frontage road. Refer to Mass Curve No. 1.
5. Transfer traffic to expressway lane(s). Construct Ramp "A" using excavation from East frontage road. Refer to Mass Curves No. 2 & No. 4.
6. Obliterate detour and remaining portions of existing highway. Approx. 9000 C.Y. of base material salvaged from obliterated portions of existing highways shall be used as roadbed treatment on the new construction.

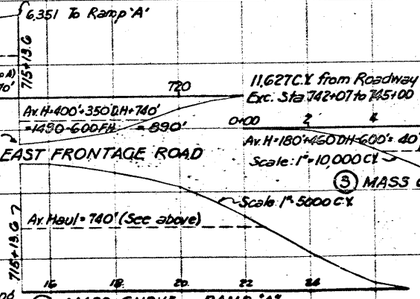
* The Contractor may develop his own sequence of work for grading provided the construction requirements are complied with.



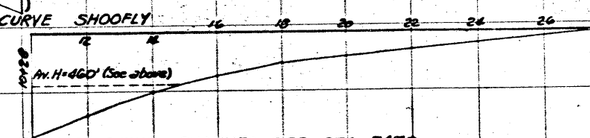
① MASS CURVE ROADWAY EXCAVATION EXPRESSWAY LANES



② MASS CURVE ROADWAY EXCAVATION EAST FRONTAGE ROAD



④ MASS CURVE RAMP "A"



⑤ MASS CURVE CHANNEL OPP. STA. 747+

* OVERHAUL

Exp. Lanes:	Sta 685+00 to 719+07.25	= 3600 × 1960 + 40930 × 350 ÷ 1320	= 16,198
" "	Sta 719+07.25 to 747+02.58	= 5684 + 2080 + 11823 + 1780 + 10471 + 1230 ÷ 1320	= 34,665
" "	Sta 747+02.58 to 767+73.51	= 7623 × 1380 + 12289 × 610 ÷ 1320	= 13,649
" "	Sta 767+73.51 to 1071+18.6	= 12088 × 1210 ÷ 1320	= 9,247
Shoofly:		= 7825 × 40 ÷ 1320	= 237
Ramp "A":		= 6351 × 970 + 3594 × 890 ÷ 1320	= 7,090
			TOTAL = 81,086 YD.

* The total overhaul based on this sequence is 81,086 YD. It is given for estimating purposes only since this item shall be subsidiary to the other bid items

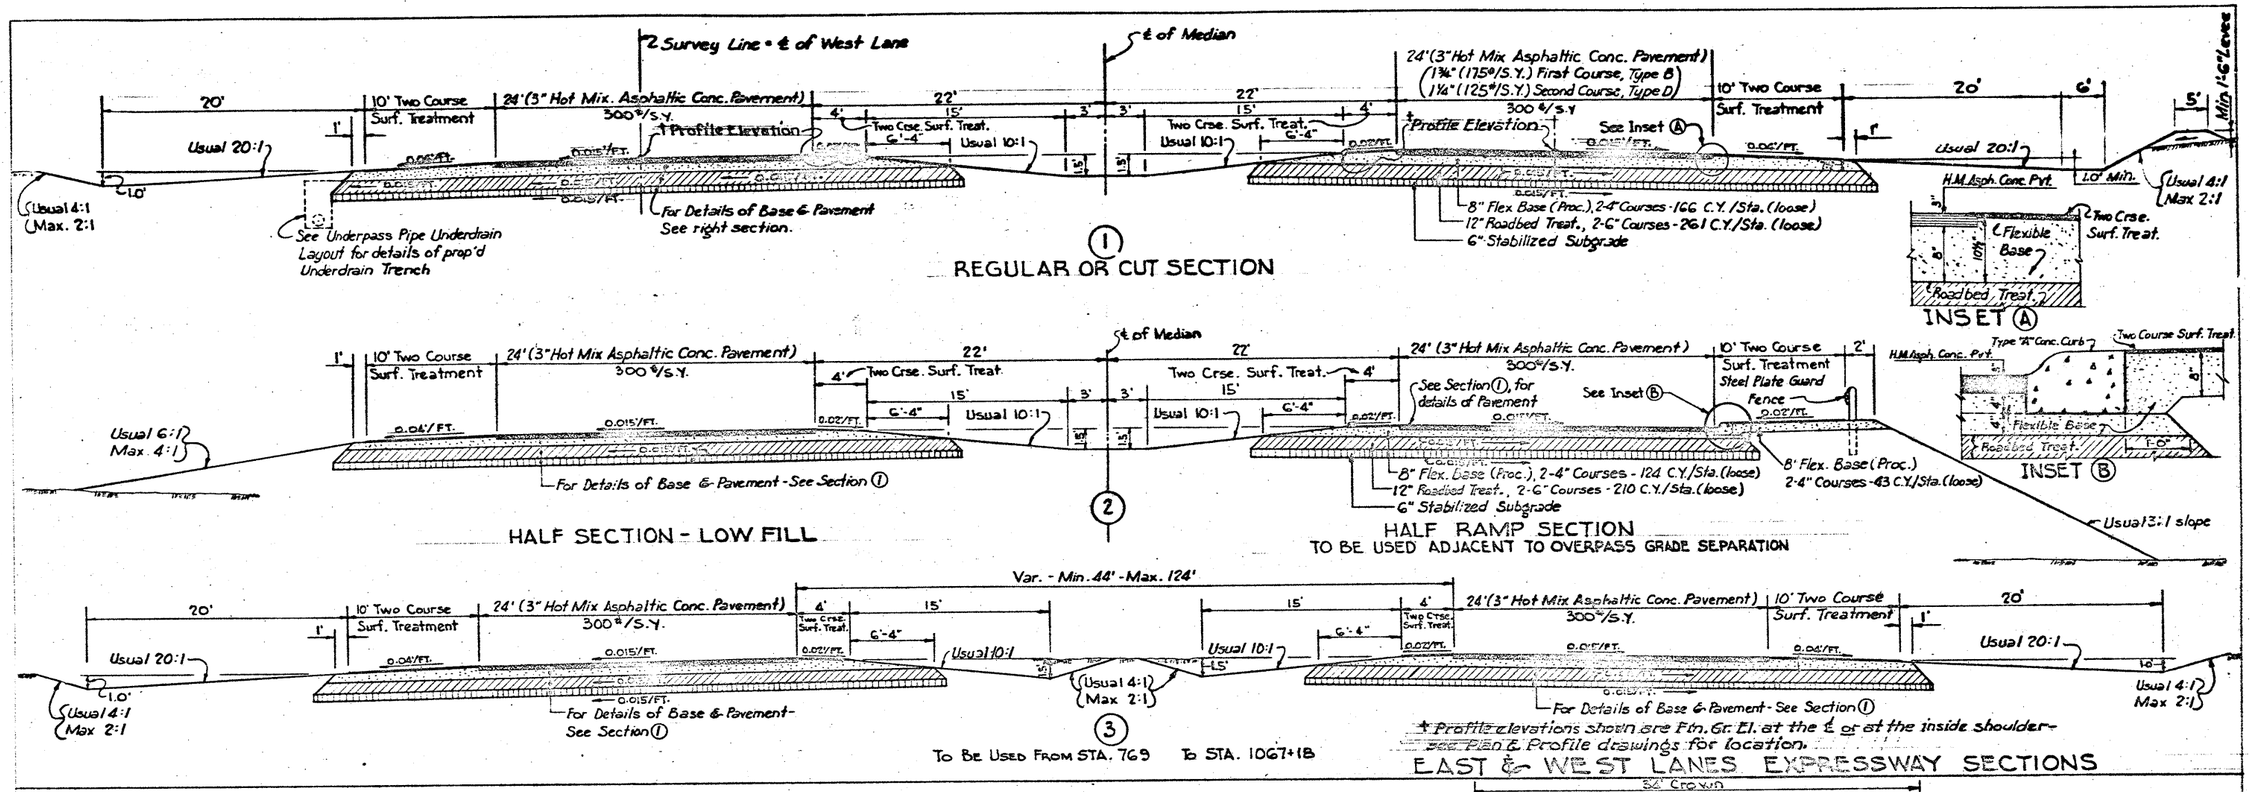
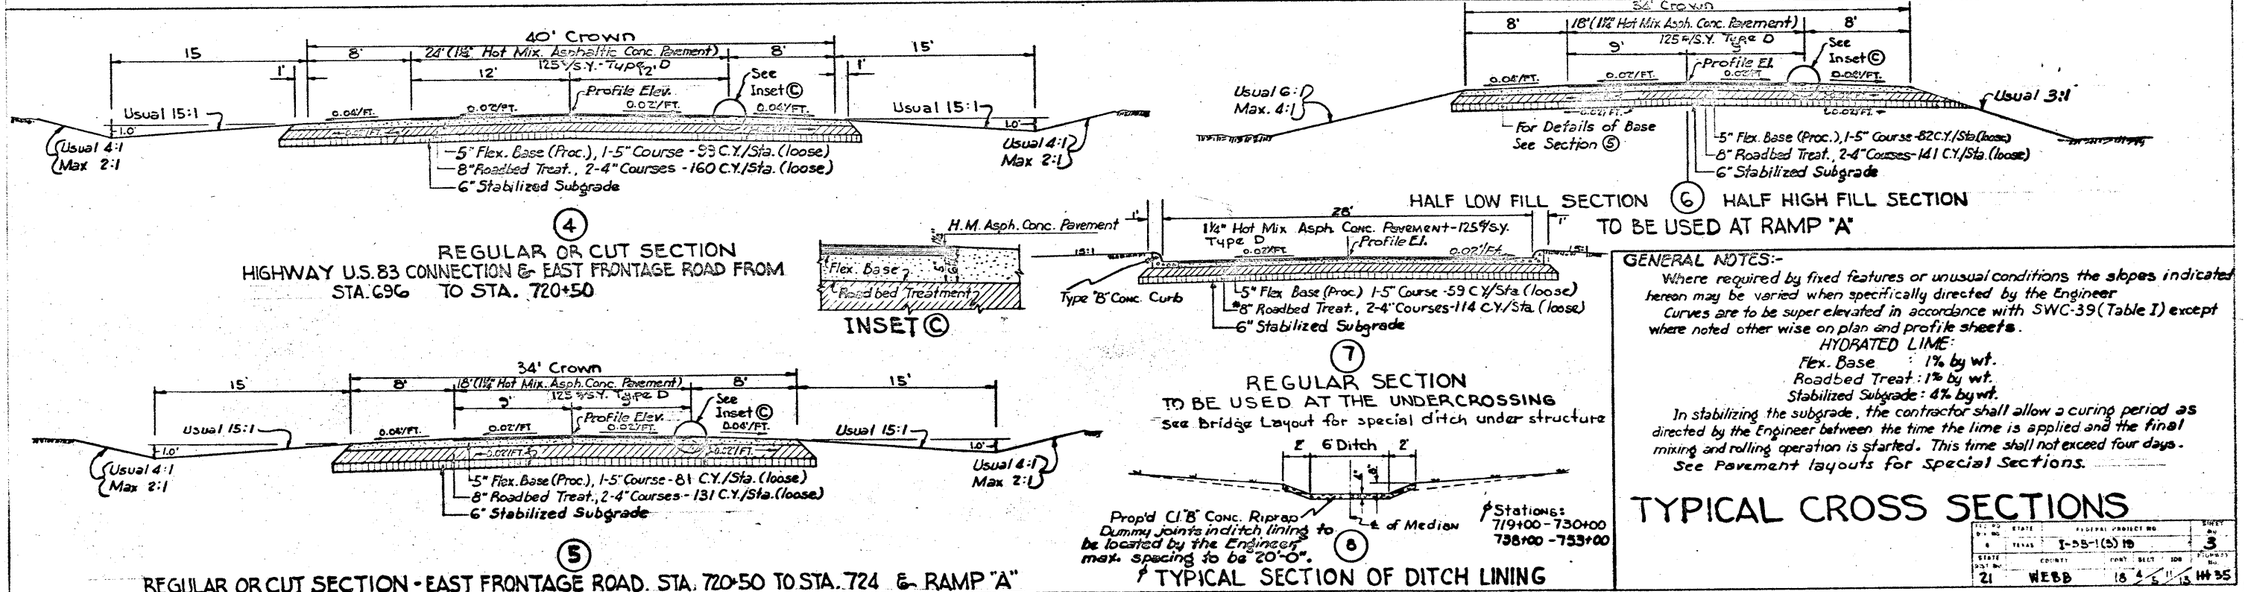
SHEET OF SHEETS





GENERAL NOTES:-

Where required by fixed features or unusual conditions the slopes indicated hereon may be varied when specifically directed by the Engineer.

Curves are to be super elevated in accordance with SWC-39 (Table I) except where noted other wise on plan and profile sheets.

HYDRATED LIME:

Flex. Base : 1% by wt.

Roadbed Treat : 1% by wt.

Stabilized Subgrade : 4% by wt.

In stabilizing the subgrade, the contractor shall allow a curing period as directed by the Engineer between the time the lime is applied and the final mixing and rolling operation is started. This time shall not exceed four days.

See Pavement layouts for special Sections.

GENERAL NOTES:-

Pole line adjustments have been made for the detour at the location shown.

The Contractor shall clear and grubb the area upon which the detour is to be built and shall construct a temporary fence at the location shown. Temporary drainage structures of sufficient strength to carry the traffic load and of a length that will support the crown and side slopes shall be installed to established grades and locations.

The contractor shall then construct the detour to the approximate grade shown, complete with flexible base and pavement as called for in the Typical Section.

When the detour is no longer needed, it should be obliterated and the temporary drainage structures and fence removed. The area shall be left in a condition as close as practical to its original state.

The above items of work, except "Clearing and Grubbing" will not be paid for directly, but shall be considered as subsidiary items to the other items of this contract.

"Clearing and Grubbing" will be paid in accordance with Item 100, "Clearing & Grubbing" of the standard specifications.

TYPICAL SECTION-SHOOFLY TRACK NOT TO SCALE

ESTIMATED QUANTITIES	
Excavation	75 C.Y.
Embankment + Shr.	19,527 C.Y.

NOTE:
1. Proposed drainage systems for ultimate facility are not shown.
2. The Railroad Company will furnish, deliver and place all track materials, including gravel ballast for the shoofly.

GENERAL NOTES:-

Prior to the construction of the Shoofly, the area upon which it is to be built shall be cleared and grubbed. The Railroad R.O.W. fence shall be relocated as shown. The Contractor shall install temporary drainage structures as shown to established grades. These structures shall be reinforced concrete pipe of the size shown & of sufficient strength to carry the traffic load and of a length to support the crown and side slopes.

The Shoofly embankment shall be constructed from road & channel excavation adjacent to the underpass structure, and in accordance to Item No. 106, "Embankment."

When the Shoofly is no longer needed the embankment and drainage structures shall be removed and incorporated into permanent construction.

The temporary fence shall be moved to its original position and the railroad right-of-way restored to its original condition except for permanent construction.

The work listed above will be paid for under the following bid items: Clearing & Grubbing, Uncl. Road Excavation (for both construction and removal of shoofly) Sprinkling, Rolling, 24" R.C. Pipe, Type III, & Relaying Culvert Pipe. All other work encountered in the construction, maintenance & removal of shoofly, except those items of work to be done by the Railroad Company, shall be considered as subsidiary items and will not be paid for directly.

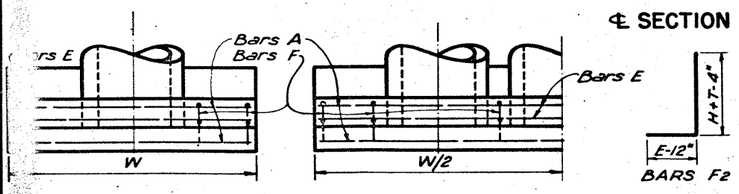
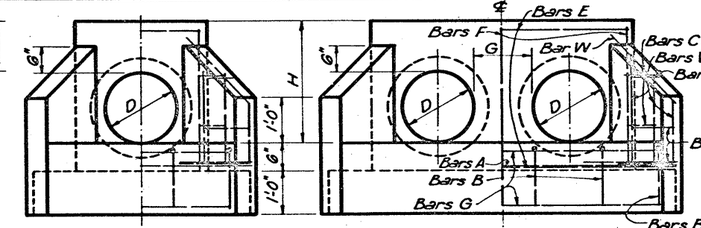
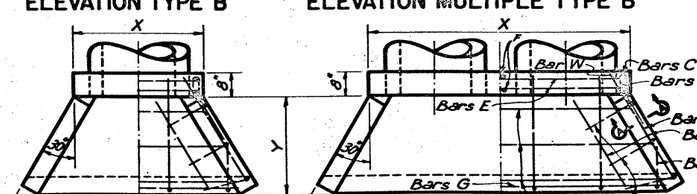
ELEVATION TYPE A — ELEVATION MULTIPLE TYPE A — ℄ SECTION



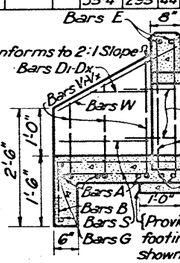
PLAN TYPE A — PLAN MULTIPLE TYPE A



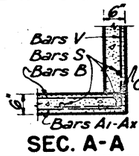
ELEVATION TYPE B — ELEVATION MULTIPLE TYPE B



PLAN TYPE B — PLAN MULTIPLE TYPE B



TYPICAL WING ELEVATION



SEC. A-A

$A_1 = W + 4\frac{1}{2}"$
$A_2 = W - 9\frac{5}{8}"$

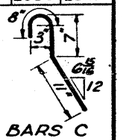
This dimension reduced 1'-1⅛" for each successive bar.

BARS A1-Ax

$B = Y + 4"$
$B_1 = 8"$

This dimension increased 2'-7" for each successive bar.

BARS B & B1-Bx



BARS C

GENERAL NOTES:-

All concrete shall be Class A. All exposed corners shall be chamfered ¾".

Reinforcing steel shall be placed with the center of the outside layer of bars 2" from the surface of the concrete. Total Quantities include one 20 diameter lap for all bars over 40'-0" in length.

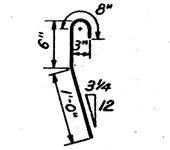
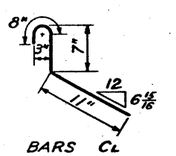
*These Total Quantities are for (2 Aprons, 2 Headwalls & 4 Wingwalls).

W + 5½"
BAR A1
Reduce this dimension by an increment of 1'-5½" for each successive bar.
B1 = 6"
B = 5 · 6¼"
BARS B & B1-Bx
Increase this dimension by an increment of 1'-1⅛" for each successive bar.

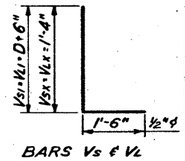


BARS Cs

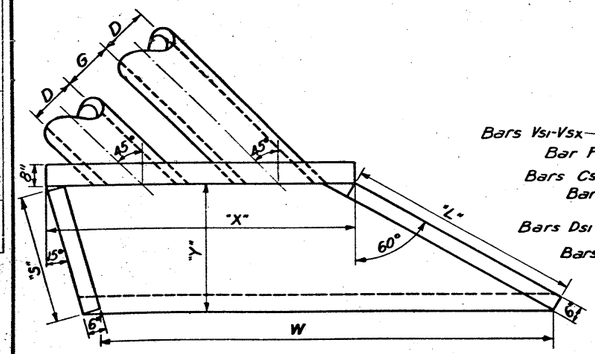


BARS CL

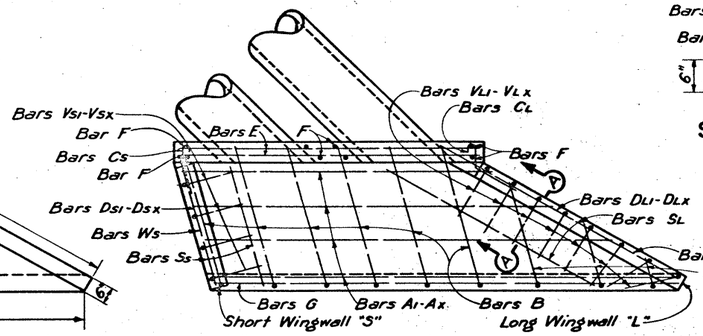
W + 1"
BARS G



BARS Vs & VL

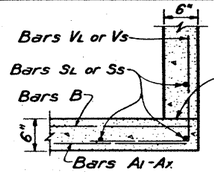


DIMENSIONS ONLY

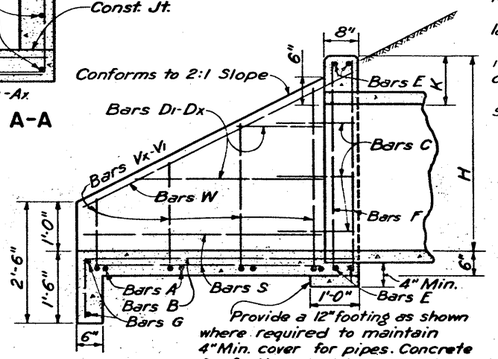


REINFORCING ONLY

PLANS



SECTION A-A



Provide a 12" footing as shown where required to maintain 4" Min. cover for pipes. Concrete for footing shall be added to Total Quantities shown.

TYPICAL WING ELEVATION

GENERAL NOTES:-
All Concrete shall be Class A.
Dimensions relating to reinforcing steel are to centers of bars.
Steel cover to be 2" from center of outside layer of steel to face of concrete.
Quantities of reinforcing steel shown hereon include one 20 diameter lap for all bars exceeding 40'-0" in length.
Subscripts "s" & "L" for bar markings designate short wingwall (s) and long wingwall (L).
Chamfer all exposed corners ¾".

GENERAL NOTES:
All concrete shall be Class A.
Dimensions relating to reinforcing steel are to centers of bars.
Steel cover to be 2" from center of outside layer of steel to face of concrete.
Chamfer exposed corners ¾" except as otherwise noted.

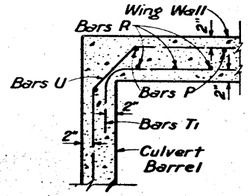
BARS U



ARRANGEMENT OF WING WALL REINF. AT CULVERT WALL

DETAIL OF WING WALL

GENERAL NOTES:
All concrete shall be Class A. Chamfer all exposed corners 3/4" unless specified otherwise.
All dimensions relating to reinforcing steel are to centers of bars.

HALF ELEVATION

*Place one weep hole per wing at approximate earth line as shown. Fill around inlet of drains with broken stone or coarse gravel to permit free passage of water. Weep holes required for Z-6'-6" and greater.

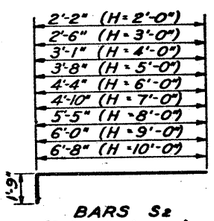
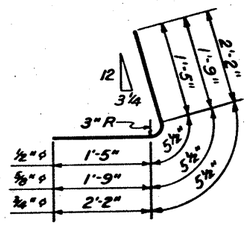
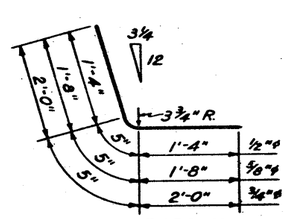
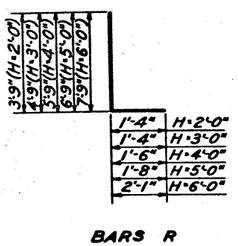
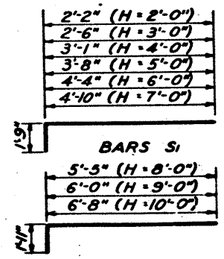
DETAIL OF WINGWALL

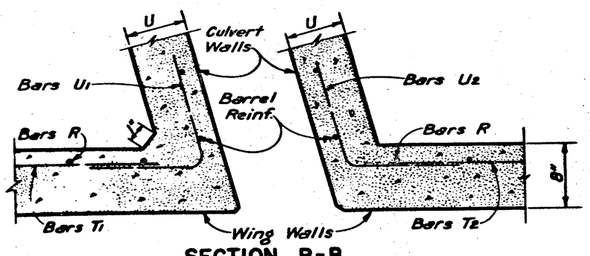


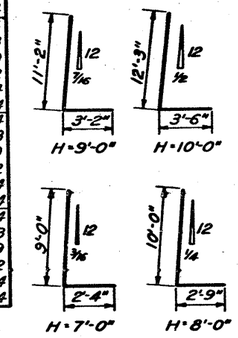












GENERAL NOTES:

All Concrete shall be Class A. Chamfer all exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Provide weepholes for H=5'-0" and greater.

The bottom slab of the barrel, wing footings and toe walls shall be placed in one continuous operation.

Wings shall be constructed monolithic with the barrel. If construction joints are used near the top of the barrel walls these joints shall continue through the wings.

GENERAL NOTES:-

All concrete shall be Class A.

Dimensions relating to reinforcing steel are to centers of bars.

Steel cover to be 2" from center of outside layer of steel to face of concrete.

Chamfer exposed corners ¾" except as otherwise noted.

Quantities of reinforcing steel include one 30 diameter lap for all bars exceeding 40'in length.

GENERAL NOTES:

Rail sections may be of two panel lengths or continuous for a number of panel lengths not to exceed 50'-0" length.

All anchorage provisions, including bolts, nuts, washers, shim plates and ø 3 hoops around bolts, are considered parts of the railing.

The lower anchor bolts for posts at the acute angle ends of skewed spans shall be bent as required to provide a maximum penetration of bolts into slab, and to provide a minimum cover of 1½" for the bolt.

At posts where railing channel is spliced provide ⅛" opening between ends of channel, tighten ⅞" ø bolts and then back off ½ turn and burr threads.

Rail Post anchor bolts, nuts and washers shall, after shop fabrication, be cadmium coated by the Udylite Process in accordance with A.S.T.M. Spec. A 165 or Galvanized in accordance with A.S.T.M. Spec. 153

All Posts shall be set vertically.

If the metal railing is properly cleaned by sand-blasting or pickling the shop coat of Paint may be applied by spray.

SPACING FOR HIGHWAY DELINEATORS ON HORIZONTAL CURVES
TEXAS HIGHWAY DEPARTMENT STANDARD

Degree of Curve	Spacing On Curve	Spacing in Advance of and Beyond Curve		
		First space	Second space	Third space
1	93'-9"	100'	100'	100'
2	62'-6"	100'	100'	100'
3	50'	87'-6"	100'	100'
4-5	43'-9"	81'-3"	100'	100'
6-7	37'-6"	68'-9"	100'	100'
8-9-10	31'-3"	56'-3"	93'-9"	100'
11-19 incl.	25'	43'-9"	75'	100'
20-30 incl.	18'-9"	31'-3"	56'-3"	100'

The spacing on the curve is found from the formula $S = 1.2\sqrt{R+18}$ adjusted to the nearest multiple of 6'-3" where R is the radius of the curve in feet. The spacing to the first delineator in advance of and beyond the curve is 1.8S, to the next delineator 3S, and to the next 6S, but not to exceed 100 feet.

SPACING FOR HIGHWAY DELINEATORS ON VERTICAL CURVES

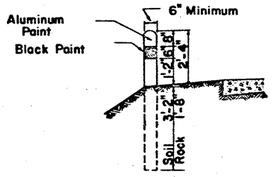
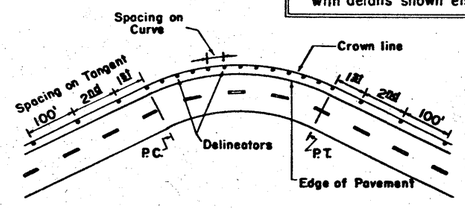
The spacing, S, on the vertical curve (to a maximum of 100 feet) is found from the formula: $S = 94\sqrt{\frac{L}{G}} - 20$, adjusted to the nearest multiple of 6'-3", where L is the length of curve in hundreds of feet and G is the algebraic difference in percent of grade. The spacing to the first delineator in advance of and beyond the curve shall be 1.8S, to the next delineator 3S and to the next 6S, but not to exceed 100 feet.



DETAIL OF DELINEATOR POSTS



DELINEATORS FOR CURVES OR TANGENT SECTIONS

TIMBER POST GUARD FENCE

GENERAL NOTES

See Specifications for Material requirements and Construction methods.

TYPE 7 GUARD FENCE: Detail drawings and samples of plates and fittings must be submitted to and approved by the Texas Highway Department. Special fabrication will not be required in installations having a curvature of greater than 150' radius; those having a curvature of less than 150' radius will have a beam fabricated to fit the designated curve. With the exception of those terminating at bridges, each length of guard fence shall flare out from the roadway center-line as detailed. The ones terminating at bridges shall be constructed according to detail plans. Bolts used in attaching rail to post shall be of sufficient length to extend through the full thickness of the nut and no more than 3/4" beyond it. Square steel plate washers, of not less than 1¾" on a side, will be permitted in lieu of the round washer shown. Square top steel posts may be used in lieu of beveled posts.

TIMBER POST GUARD FENCE: Installations on fills will be spaced in multiples of 6'-3" and in accordance with details shown elsewhere.

Design Notes

Material ..... A.S.T.M. A7 Structural Steel except as noted.

Specifications ..... A.R.E.A. 1958

Rivets ..... ⅞" unless noted (High Strength bolts accept-able for field connections)

Floor Bolts ..... ⅝" " " "

Welding ..... Electric Arc

Paint (Shop) ..... One shop coat of red lead and linseed oil to conform with requirements of Federal Spec. TT-P-86a, Type I except deck material no paint.

Paint (Field) ..... Two coats of No. 708 Aluminum Paint Finish. Cont. Existing Parts. Steel to be cleaned and given one coat of No. 708 Aluminum Paint Finish Coat.

Welding Deck Plates ..... The deck plates are to be joined together and fastened to the structural members by welding as shown. The finished structure must be free from distortion and from unusual stresses due to weld shrinkage. It is anticipated that the passing of each bead in all groove welds will be necessary. The contractor shall plan, submit and obtain approval of a welding procedure before field welding is begun.

ITEM 7:

PROTECTION OF TRAFFIC:-

Erection of Interstate Signs shall be scheduled to interfere as little as possible with vehicle traffic on the expressway. The following requirement must be observed: Portable W-155 signs shall be displayed on the median and shoulder 700' in advance of any work being performed. Signs shall be removed from view at all times when work is not in progress. * (See Add'l Note Below)

DAMAGE TO UTILITIES:-

The Contractor will be held fully responsible for damage of any kind caused by his operations to any utility or structure, and shall make such damage good at his own expense.

SCOPE OF WORK:-

It is the intent of these plans to provide for a complete system of Interstate signs, installed at the locations indicated in these plans. All work, material, and services not expressly called for in the specifications or not shown in the plans, which may be necessary for complete and proper construction shall be performed, furnished, and installed.

Upon completion of the work and before acceptance and final payment is made, the Contractor shall clean, remove rubbish from the site of the work, restore in an acceptable manner all property, both public and private which has been damaged during the prosecution of the work, and leave the site of work in a neat and presentable condition throughout.

No extra compensation will be allowed for fulfilling the requirements stated above.

NOTE:-All signs shall be erected according to the station number shown on the plan & profile sheets except that the Engineer may shift a sign in order to secure a more desirable location. The Engineer will stake all sign locations, and no changes in these locations shall be made without prior approval of the Engineer.

ITEM 716:

Dimensions for corner radii above 3" may vary plus or minus 1".
Dimensions for border width may vary as much as plus ½".
Borders and corner radii must be of matching widths.

ITEM 722:

Type D-A mount (See Sheet No. 36 for details) shall be constructed in accordance with Item 722 - "Roadside Traffic Sign Mounts Types A, B, C & D.

ITEM 724:-

See Sheet No. 36 for special clamp detail for holding two signs on one Type F-2 Mount. Mounting Detail of GAS-FOOD-LODGING Sign shall be as shown for Type 4A on Standard Plan Sheet SMD-4 or SMD-58.

* NOTE:-Signs IW-6, IW-7 & IW-113 and any other Standard Regulatory and Warning Signs not shown on Standard Sheets ISR(1) and ISMW(1) shall conform to the T.H.D. Traffic Manual for control devices for streets and highways. Flagman and appropriate signs shall be used for the full time that construction requires Public travel at reduced speeds and where construction equipment occupies a travel lane or adjacent shoulder.

ALTERNATE NO.1

Aluminum Signs Type E can be used as an alternate for some Plywood Signs as indicated in the Sign Tabulation Sheets. Length of posts shown for these signs have been figured on the basis of Plywood Type A or Type B being the sign blank material according to Standard Plan Sheet SMD-4. Should contract be awarded on basis of Aluminum Signs Type E, that is 2½" honeycomb aluminum sign blanks, the Contractor must order post lengths according to Standard Plan Sheet SMD-58.

ALTERNATE NO 1

Aluminum Signs Type E can be used as an alternate for these Plywood Signs. Length of posts shown for these signs have been figured on the basis of plywood Type A or Type B being the sign blank material according to Standard Plan Sheet SMD-4. Should contract be awarded on basis of Aluminum Signs Type E, that is 2½" honeycomb aluminum sign blanks, the Contractor must order post lengths according to Standard Plan Sheet SMD-5B.

ALTERNATE NO 1

Aluminum Signs Type E can be used as an alternate for these Plywood Signs. Length of posts shown for these signs have been figured on the basis of plywood Type A or Type B being the sign blank material according to Standard Plan Sheet SMD-4. Should contract be awarded on basis of Aluminum Signs Type E, that is 2½" honeycomb aluminum sign blanks, the Contractor must order post lengths according to Standard Plan Sheet SMD-5B.
