Frontage Roads & Undercrossings

GENERAL NOTES FOR IG-26 IG-9, IG-10, IG-11, IG-18, IG-21, IG-25:- The alphabets & lateral spacing between letters & words shall conform with the U.S. Bureau of Public Roads standard rounded capital letter alphabets with any applicable modifications stated in the American Association of State Highway Officials Manual for Signing & Pavement Marking of the National System of Interstate & Defense Highways-1958, and/or subsequent revisions thereto. Lateral spacing of text shall be such as to provide a balanced appearance.

All removable copy letters, numerals, arrows, symbols, & borders used on signs for this contract shall be of the same manufacture.

The sign area outside the corner radius need not be trimmed.

For all these Guide Signs, the letters, borders, numerals, & arrows shall be reflectorized removable copy conforming with the Specifications, & the background shall be of Interstate Green Reflective Material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint & beads of the type called for in the Specifications.

The sign blanks for all signs listed above shall be 5/8" thick plywood according to Standard Sheet SMD-4 & conforming with the Specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type "A", high density. When paint & beads are used for background reflectorization, the plywood shall be Type "B", medium density.

GENERAL NOTES

The alphabets and lateral spacing between letters and words shall conform with the U.S. Bureau of Public Roads standard rounded gothic letters as shown, with modifications as stated in the American Association of State Highway Officials Manual for Signs and Pavement Markings of the National System of Interstate and Defense Highways, and as supplemented herein. Lateral spacing of text shall be such as to give visual balance and appearance.

For IA-1, IA-2, IA-3, and IA-3A signs, the letters, arrows, numerals, and all as shown hereon shall be reflectorized with the specified sheeting. For IG signs which are independently illuminated, the legend and border on Interstate green reflective material of either flat or high intensity sheeting, reduced lens reflective sheeting of paint and cutout film as specified in the plans. For signs which are independently illuminated, the legend and border on Interstate green porcelain enamel shall be as shown hereon and shall be Interstate green porcelain enamel conforming with the specifications.

For IG-1, IG-2, IG-3, IG-3A, and IG-4 signs, the letters, arrows, numerals, and all as shown hereon shall be reflectorized with the specified sheeting, and the background shall be flat surface reflective sheeting paint as Interstate B, E, or G.

All of the sign letters, numerals, arrows, and borders used on signs of this contract shall be the same as the plans.

For signs that are not reflectorized or are independently illuminated shall be constructed of aluminum alloy panels as specified in the contract. Should the contractor elect to use extruded aluminum alloy panels, the aluminum alloy shall conform with A.S.T.M. Specification B-221, alloy 6S-T6. Should the contractor elect to use sheet aluminum panels, the aluminum alloy shall conform with A.S.T.M. Specification B209 alloy designation 6S-T6. The aluminum alloy shall be a minimum of 0.09 inch thick for the face panels of extruded panels, and 0.08 inch thick for sheet panels, where possible. For sign faces for all signs shown on this sheet which are not independently illuminated shall be 0.04 inch thick, flat sheet aluminum alloy Standard Sheet SMD-4 and shall conform with the specifications. When reflective sheeting is used for the non-illuminated portions, the plywood shall be Type A, High Density. When paint and cutouts are used for the non-illuminated portions, the plywood shall be Type B, Medium Density.

The sign area outside the corner radius need not be painted.

CARDINAL DIRECTION MARKERS

GENERAL NOTES:

Alphabets and lateral spacing between letters shall conform with the U.S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters, arrows, and borders shall be white reflective, and the background shall be Interstate Blue reflectorized with blue transparent ink on a white reflectorized flat surface. Letters, arrows, and borders shall be reverse screened.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with A.S.T.M. Specification B 209, alloy GS11A-T6.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

ARROW DETAILS

GENERAL NOTES FOR DIRECTIONAL MARKERS

The arrows and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications.

Arrows and borders shall be applied directly to the surface of the reflective material by the silk screen process using Black Stencil Paint conforming with the requirements of Federal Specification TT-P-98.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with A.S.T.M. Specification B 209, alloy GS 11A-T6.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

SIGN BLANK PUNCHING DETAILS

GENERAL NOTES FOR U. S. AND STATE ROUTE MARKERS

FOR ATTACHMENT TO GUIDE SIGNS

The alphabets and lateral spacing between letters and numerals shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets and any applicable modifications stated in the AASHO Manual for Signing and Pavement Marking of the National System of Interstate and Defense Highways - 1961 edition, and/or subsequent revisions thereto. Lateral spacing of text shall be such as to provide a balanced appearance.

The face of all U. S. and State Route Markers shall be white porcelain enamel conforming with Item 707, "Aluminum Signs Type F." The letters, numerals, borders, corner radii and the outline for the U. S. Route Marker will be removable reflectorized cutout copy. The aluminum frames which house the white reflector buttons of the removable reflectorized cutout copy shall be finished in black baked enamel or black porcelain enamel conforming with Item 716, "Removable Reflectorized Cutout Letters, Numbers, Corner Radii for Sign Borders, Borders and Reflectorized Outlines for U. S. and State Route Markers."

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with A.S.T.M. Specification B209 alloy GS11A, and Item 707, "Aluminum Signs Type F."

The sign blank shall be attached to the guide sign by screws, rivets, or other common fasteners of stainless steel, galvanized steel, or aluminum subject to the condition that dissimilar metals shall be so selected or insulated as to prevent corrosion.

For sign blank punching details, see "Sign Blank Punching Details" of this sheet.

The U. S. and State Route Markers shown on this sheet shall be used only when attached to Green Guide Signs.

ARROW DETAILS

GENERAL NOTES FOR REGULATORY SIGNS

Alphabets and lateral spacing between letters and words shall conform with U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

Unless otherwise noted under specific signs, all letters, numerals, arrows, and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads, conforming with the specifications. Reflective sheeting for STOP signs shall have a flat surface.

Unless otherwise stated all letters, numerals, arrows and borders shall be applied direct to the surface of the reflective material by the silk screen process using Black Stencil Paint conforming with the requirements of Federal Specification TT-P-98.

The sign blanks shall be one piece, 5/8 inch thick plywood conforming with the specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

WARNING

GENERAL NOTES FOR WARNING SIGNS

The alphabets and lateral spacing between letters shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters and border shall be black, and the background shall be an Interstate yellow reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications.

Letters and borders shall be applied direct to the surface of the reflective material by the silk screen process, using Black Stencil Paint conforming with the requirements of Federal Specification TT-P-98.

The sign blanks shall be one piece, 5/8 inch thick plywood conforming with the specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

GENERAL NOTES FOR INTERSTATE ROUTE MARKERS

The alphabets and lateral spacing between letters and numerals shall conform with the U. S. Bureau of Public Roads standard rounded capital letter alphabets.

Colors of letters, numerals, border and background shall be as shown on the Route Marker design details. Reflective material shall be flat surface reflective sheeting. Letters, numerals, and border shall be reverse screened.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with A.S.T.M. Specification B 209, alloy GS11A-T6.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

NOTE: A tolerance of plus or minus 1/4 inch will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus 1/4 inch will be permitted for each increment of a multi-increment sign panel when necessary to secure square, tight fitting joints.

GENERAL NOTES

Design: Conforms with BPR criteria for Overhead and Ground Signs for Highways and Standard Specifications for Highway Bridges.

All aluminum frames, stiffeners, wind beams, and joint backing strips shall conform with the requirements of ASTM Specification B 308 alloy GS 11A-T6 or ASTM Specification B 235 alloy GS 11A-T6.

All erection bolts shall be either stainless steel, galvanized steel or aluminum machine bolts with hex. heads and nuts. Each bolt is to be provided with 2 flat or beveled washers, as required, and 1 lock washer.

*Anchor bolts, nuts, washers, base plates and WF post shall be galvanized as per Item 442 of Standard Specifications. Base plates and WF post shall be galvanized after shop fabrication.

All field alterations of WF post lengths, either shortening or extending, shall be made at the tops of post. Surfaces where the galvanizing has been destroyed shall be metalized.

All erection holes in aluminum shapes shall be field drilled.

Top anchor bolt nuts shall be tightened and threads burred.

All WF posts shall be Structural Steel, ASTM-A7.

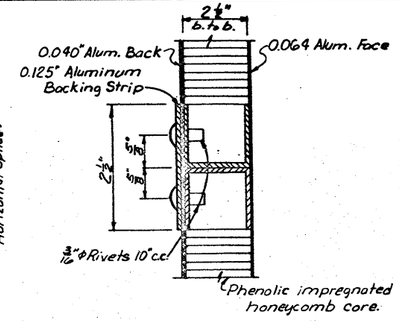
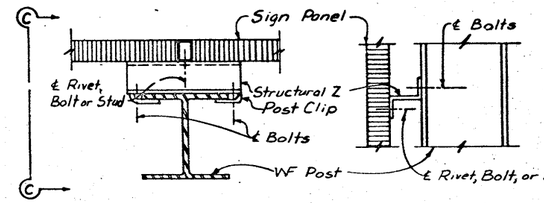
* Projection of the sign panel above the top of the post shall not exceed "H/4" or 1:0" ; whichever is smaller.



SECTION A-A



SECTION B-B SECTION C-C

GENERAL NOTES:

Design of supports complies with the requirements of Specifications for the Design and Construction of Structural Supports for Highway Signs and Standard Specifications for Highway Bridges.

Sign panels and connections shall comply with the requirements for loadings and allowable stresses as set forth in the above specifications.

All connection bolts and clamps for attachment of signs shall be either stainless steel, galvanized steel or aluminum.

Method of attaching signs to posts is supplier's choice subject to the approval of the Engineer.

WF Posts and base plates shall be structural steel conforming to the requirements of ASTM Designation A 7. Anchor bolts shall be structural steel conforming to the requirements of ASTM Designation A 307.

Materials, fabrication, and erection of steel posts and anchor bolts shall be in accordance with Items 441 & 442 of Std. Spec.

Anchor bolts, nuts, washers, base plates and WF posts, shall be galvanized after fabrication as per Item 442 of Standard Specifications.

Any field alterations of WF post lengths, either shortening or extending, shall be made at the tops of the posts.

Surfaces where the galvanizing has been destroyed shall be metalized.

Top anchor bolt nuts shall be tightened and threads burred.

Connection of Sign Panel is by back only. Rivets, Bolts, or Studs shall not appear on sign face.

NOTE:
These signs are designed for use on roadside mounted signs or overhead signs which are not to be illuminated.

FOR DELINEATORS, MILEPOSTS, AND ROADSIDE SIGNS

DELINEATORS AND MILEPOST NOTES

The numerals shall be 6" Series D white reflective, and the background shall be Interstate Green reflectorized with green transparent ink on a white flat surface reflective sheeting, using the reverse screen process. The milepost marker blanks shall be 5/8" thick, Type A, High Density plywood.

MILEPOST MARKER DETAILS

Delineators and mileposts shall be placed facing on-coming traffic two feet outside the shoulder edge or two feet from the inside face of curbed sections. Delineator posts shall be driven using an approved driving cap. Posts shall be driven prior to installation of the reflective units or milepost blanks. Delineators and mileposts shall be installed outside guard rail posts when guard rail is installed along the highway. All fasteners shall be either galvanized steel, stainless steel or aluminum.

GENERAL NOTES

If rock is encountered at a depth less than 3'6" below the ground surface, a six inch or larger diameter hole shall be drilled for the channel or pipe posts, and the post shall be set in Portland cement grout. If rock is encountered at a depth of 1'6" or more below the ground surface, the hole shall be drilled to a depth of 3'6". If rock is encountered at a depth less than 1'6" below the ground surface, the holes shall be drilled a minimum of 2'0" into the rock.

GENERAL NOTES AND SPECIFICATION DATA:

GENERAL:
This project shall be kept open to traffic at all times. All operations shall be conducted in such a manner as to insure safety of public travel at all times. Operations shall be so conducted as to avoid spilling or dropping on the pavement, dirt or other materials that might endanger public travel. Any such materials so dropped or spilled shall be immediately cleaned or picked up from the pavement or paved shoulders. All equipment and vehicles used on this job shall travel in the direction of general traffic at all times and crossing of Main Lanes over medians by equipment will not be permitted.

Erection of Interstate signs shall be scheduled to interfere as little as possible with vehicle traffic on the expressway. The following requirement must be observed: Portable W-155 signs shall be displayed on the median and shoulder 700' in advance of any work being performed. Signs shall be removed from view at all times when work is not in progress. Flagmen and appropriate signs shall be used for the full time that construction requires Public Travel at a reduced speed and where construction equipment occupies a travel lane or adjacent shoulder.

The Contractor shall use lights to mark the footing nearest the pavement edge of through Traffic Lanes that are open to Traffic for Each Traffic-Sign Support, and Footings at other locations as directed by the Engineer. The lights, which may be flares or the Flashing Electric Type, shall be used between Sunset and Sunrise for the period of time from the Beginning of construction of the Footing through the Attachment of the sign(s) to the Support.

SALVAGED MATERIAL: The salvaged posts and signs shall become the property of the Contractor, unless otherwise shown on the plans, and he shall remove them from the Right of Way.

SCOPE OF WORK: It is the intent of these plans to provide for a complete system of Interstate signs installed at the locations indicated in these plans. All work, material, and services not expressly called for in the specifications or not shown in the plans, which may be necessary for complete and proper construction shall be performed, furnished, and installed.

Upon completion of the work and before acceptance and final payment is made, the Contractor shall clean, remove rubbish from the site of the work, restore in an acceptable manner all property, both public and private which has been damaged during the prosecution of the work, and leave the site of work in a neat and presentable condition throughout. No extra compensation will be allowed for fulfilling the requirements stated above.

All signs shall be erected according to the station number shown on the Plan and Profile sheets except that the Engineer may shift a sign in order to secure a more desirable location. The Engineer will stake all sign locations, and no changes in these locations shall be made without prior approval of the Engineer.

ITEM 7411: Class C Concrete will be required for use on this item.

GENERAL: It is the intent of the plans to erect all major signs 30' and minor signs 18' from the edge of pavement. In places where these minimum distances cannot be obtained because of the frontage road, clearances will be maintained as close to these minimums as practical and still kept a minimum distance of 8' from the edge of the frontage road.

Signs shown on the plans to be removed by the Contractor shall be unbolted and removed together with supports and foundations to a minimum of one foot below the ground. All material and debris shall become the property of the Contractor and shall be disposed of by him at Sites out of sight of the highway. No direct payment will be made for this removal, but shall be considered subsidiary work to the various bid items of this Contract.

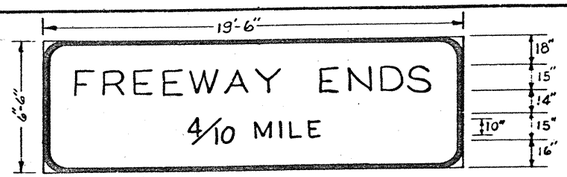
Sheet 7 of 25 - Sign 16

SANTA URSULA AVE.



Border Width 3" Corner Radius 12"

FIXED ILLUMINATION

Sheet 3 of 25 - Sign 21

The sign blank for this overhead sign shall be 1" Honeycomb aluminum panels, extruded aluminum or multi-increment aluminum panels as specified in the contract award. The background shall be Interstate Green porcelain enamel conforming with the specifications.

GENERAL NOTES FOR IG-1, IG-9, IG-11 & IG-25 :-

The alphabets and lateral spacing between letters and words shall conform with the U.S. Bureau of Public Roads standard rounded capital letter alphabets with any applicable modifications stated in the American Association of State Highway Officials Manual for Signing & Pavement Marking of the National System of Interstate and Defense Highways - 1961, and/or subsequent revisions thereto. Lateral spacing of text shall be such as to provide a balanced appearance.

All removable copy letters, numerals, arrows, symbols and borders used on signs for this contract shall be of the same manufacture.

The sign area outside the corner radius need not be trimmed.

For all these Guide Signs, the letters, borders, numerals & arrows shall be reflectorized removable copy conforming with the Specifications, and the background shall be of Interstate Green Reflective Material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads of the type called for in the Specifications.

The sign blanks for all signs listed above, except as noted, shall be 3/4" plywood according to Standard Sheet SMD-4 and conforming with the Specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type "A", high density. When paint & beads are used for background reflectorization, the plywood shall be Type "B", medium density.

NOTE: A tolerance of plus or minus 1/4 inch will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus 1/4 inch will be permitted for each increment of a multi-increment sign panel when necessary to secure square, tight fitting joints.

GENERAL NOTES

Design: Conforms with BPR criteria for Overhead and Ground Signs for Highways and Standard Specifications for Highway Bridges.

All aluminum frames, stiffeners, wind beams, and joint backing strips shall conform with the requirements of ASTM Specification B 108 alloy GS 11A-T6 or ASTM Specification B 235 alloy GS 11A-T6.

All erection bolts shall be either stainless steel, galvanized steel or aluminum machine bolts with hex. heads and nuts. Each bolt is to be provided with 2 flat or beveled washers, as required, and 1 lock washer.

*Anchor bolts, nuts, washers, base plates and WF post shall be galvanized as per Item 442 of Standard Specifications. Base plates and WF post shall be galvanized after shop fabrication.

All field alterations of WF post lengths, either shortening or extending, shall be made at the tops of post. Surfaces where the galvanizing has been destroyed shall be metalized.

All erection holes in aluminum shapes shall be field drilled.

Top anchor bolt nuts shall be tightened and threads burred.

All WF posts shall be Structural Steel, ASTM-A7.

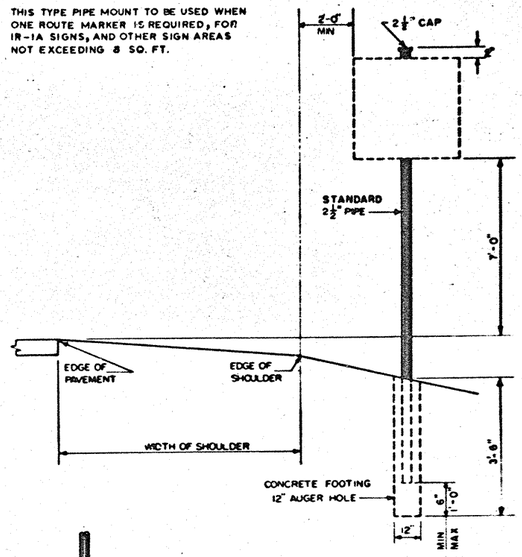
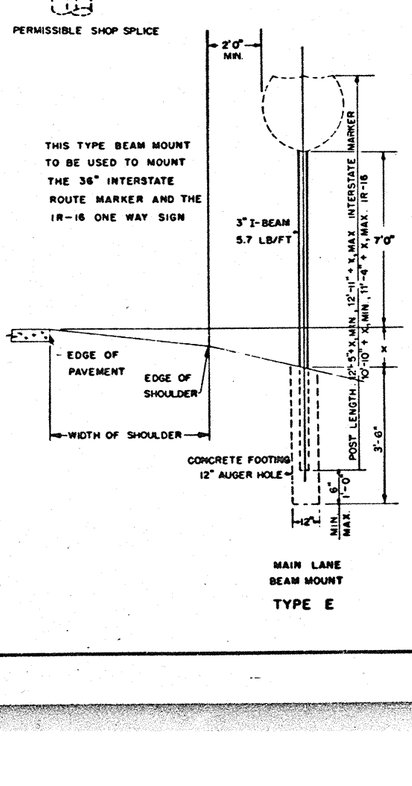
THIS TYPE PIPE MOUNT TO BE USED WHEN ONE ROUTE MARKER IS REQUIRED, FOR IR-1A SIGNS, AND OTHER SIGN AREAS NOT EXCEEDING 8 SQ. FT.



FRONTAGE ROAD PIPE MOUNT

TYPE A

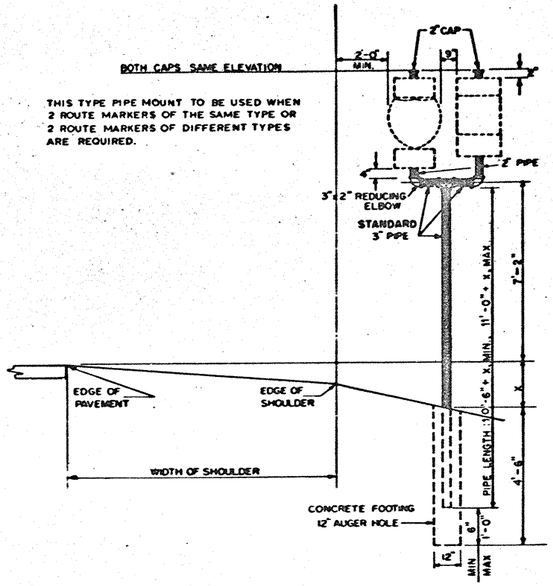


THIS TYPE BEAM MOUNT TO BE USED TO MOUNT THE 36" INTERSTATE ROUTE MARKER AND THE IR-16 ONE WAY SIGN

MAIN LANE BEAM MOUNT

TYPE E

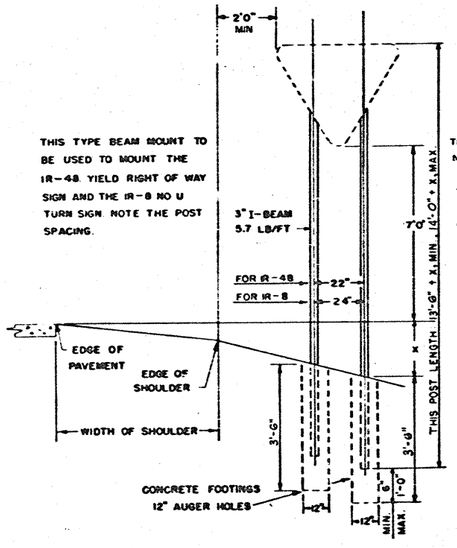
THIS TYPE PIPE MOUNT TO BE USED WHEN 2 ROUTE MARKERS OF THE SAME TYPE OR 2 ROUTE MARKERS OF DIFFERENT TYPES ARE REQUIRED.



FRONTAGE ROAD PIPE MOUNT

TYPE B

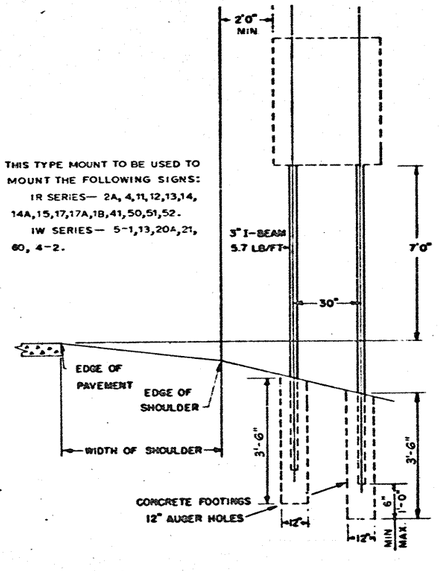
THIS TYPE BEAM MOUNT TO BE USED TO MOUNT THE IR-4B YIELD RIGHT OF WAY SIGN AND THE IR-8 NO U TURN SIGN. NOTE THE POST SPACING.



MAIN LANE BEAM MOUNT

TYPE F-1

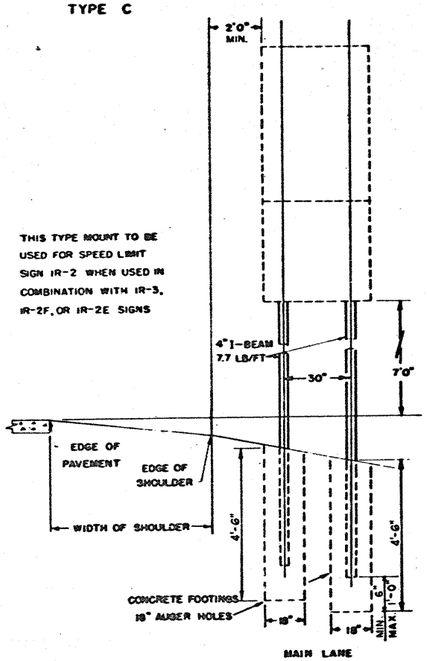
THIS TYPE MOUNT TO BE USED TO MOUNT THE FOLLOWING SIGNS:
IR SERIES— 2A, 4, 11, 12, 13, 14, 14A, 15, 17, 17A, 18, 41, 50, 51, 52.
IW SERIES— 5-1, 13, 20A, 21, 60, 4-2.



MAIN LANE BEAM MOUNT

TYPE F-2

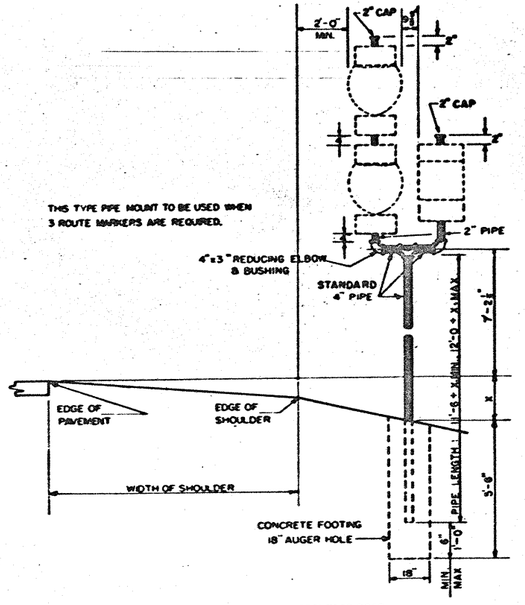
THIS TYPE MOUNT TO BE USED FOR SPEED LIMIT SIGN IR-2 WHEN USED IN COMBINATION WITH IR-3, IR-2F, OR IR-2E SIGNS



MAIN LANE BEAM MOUNT

TYPE G

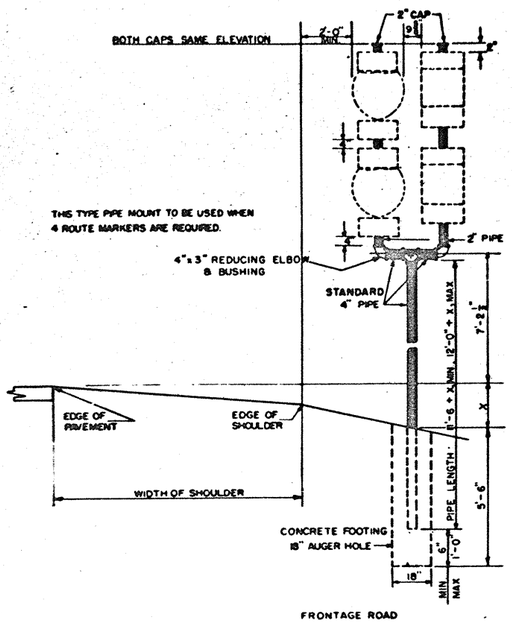
THIS TYPE PIPE MOUNT TO BE USED WHEN 3 ROUTE MARKERS ARE REQUIRED.



FRONTAGE ROAD PIPE MOUNT

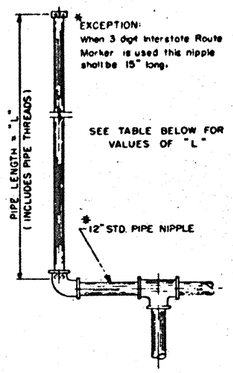
TYPE C

THIS TYPE PIPE MOUNT TO BE USED WHEN 4 ROUTE MARKERS ARE REQUIRED.



FRONTAGE ROAD PIPE MOUNT

TYPE D



P = 21" x 9" Cardinal Direction Marker
Q = 24" Interstate, U.S. or State Route Mkr.
R = 21" x 15" Directional Arrow

MARKER COMBINATIONS	"L"
2P + 2Q + 2R + 10"	8'-10"
P + 2Q + 2R + 10"	8'-1"
2Q + 2R + 10"	7'-4"
Q + R + 6"	3'-9"
P + Q + R + 6"	4'-6"

When 3 digit Interstate Route Markers are used, 1" should be added to "L" in table above for each 3" digit marker used.

GENERAL NOTES

See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.

Where solid rock is encountered, footing shall extend two feet into the rock.

Pipe shall be standard weight, welded or seamless, and conform with the requirements of A.S.T.M. Specification A53.

Fittings shall conform with the requirements of A.S.T.M. Specification A197.

Structural steel shall conform with requirements of A.S.T.M. Specification A 7.

All footings for Types A, B, C, D, E, F-1, F-2 and G shall be non-reinforced.

Galvanizing of all posts shall be projection above concrete plus b minimum.

GENERAL NOTES FOR DIRECTIONAL ARROW MARKERS AND CARDINAL DIRECTION MARKERS

Alphabets and lateral spacing between letters shall conform with the U. S. Bureau of Public Roads standard roadside capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

The letters, arrows, and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting or paint and beads conforming with the specifications.

The letters, arrows, and border shall be applied directly to the surface of the reflective material by the silk screen process.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with the Item , "Aluminum Signs Type A," or one piece 12 gauge sheet steel conforming with the Item, "Sheet Steel Signs Type A."

For sign blank punching details, see sheet on "Sign Blank Punching Details."

STANDARD U. S. AND STATE HIGHWAY ROUTE MARKERS

GENERAL NOTES FOR U. S. AND STATE HIGHWAY ROUTE MARKERS

For the M1-3F, M1-3R, M1-4F, and M1-4R Route Markers a print of the Texas State outline shall be obtained from the TEXAS HIGHWAY DEPARTMENT to be used for making a stencil.

For all Route Markers on this sheet, except M1-2, M1-4F, and M1-4R, letters, numerals, and border shall be black and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads conforming with the specifications. The letters, numerals, and border shall be applied direct to the surface of the reflective material by the silk screen process.

For the M1-2, M1-4F, and M1-4R Route Markers, the U.S. and State outline shall be white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads conforming with the specifications. The numerals and background shall be black and applied by the reverse screen process.

The sign blanks shall be one piece sheet aluminum alloy 0.125 inch thick conforming with the Item, "Aluminum Signs Type A," or one piece 12 gauge sheet steel conforming with the Item, "Sheet Steel Signs Type A."

For sign blank punching details see sheet on "Sign Blank Punching Details."

GENERAL NOTES FOR REGULATORY SIGNS

Alphabets and lateral spacing between letters and words shall conform with U. S. Bureau of Public Roads standard rounded capital letter alphabets. Lateral spacing of text shall be such as to provide a balanced appearance.

Unless otherwise noted under specific signs, all letters, numerals, arrows, and borders shall be black, and the background shall be a white reflective material of either flat surface reflective sheeting, exposed lens reflective sheeting, or paint and beads, conforming with the specifications. Reflective sheeting for STOP signs shall have a flat surface.

Unless otherwise stated all letters, numerals, arrows and borders shall be applied direct to the surface of the reflective material by the silk screen process.

The sign blanks shall be one piece, 5/8 inch thick plywood conforming with the specifications. When reflective sheeting is used for background reflectorization, the plywood shall be Type A, High Density. When paint and beads are used for background reflectorization, the plywood shall be Type B, Medium Density.

For sign blank punching details, see sheet on "Sign Blank Punching Details."

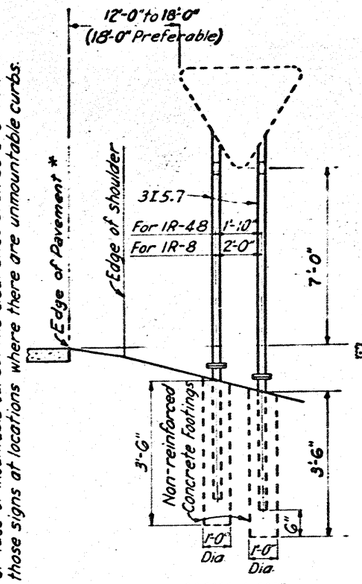
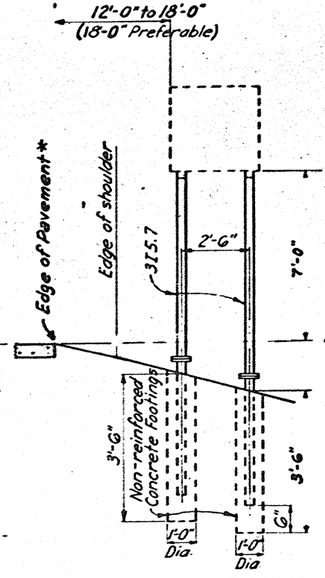
* Or face of mountable curbs. The clearance shall be 2'-0" min for those signs at locations where there are unmountable curbs.



MAIN LANE BEAM MOUNT

TYPE F-1

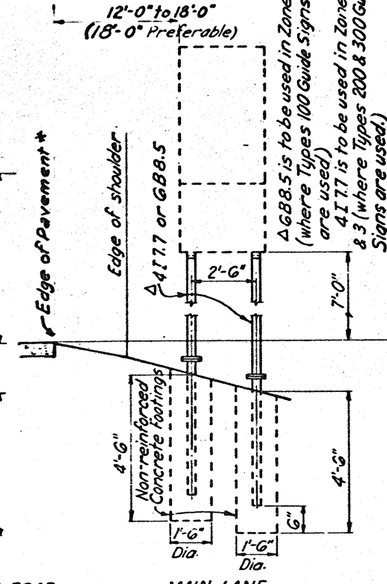
This type beam mount to be used to mount the IR-48 Yield Right of Way sign and the IR-8 No U Turn sign. Note the post spacing.



MAIN LANE & FRONTAGE ROAD BEAM MOUNT

TYPE F-2

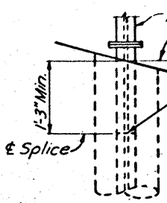
This type beam mount to be used to mount the following signs: IR series - 2A, 4, 11, 12, 13, 14, 14A, 15, 17, 17A, 18, 41, 50, 51 & 52. & 1W series - 5-1, 13, 20A, 21, 60, & 4-2, & IR-15R



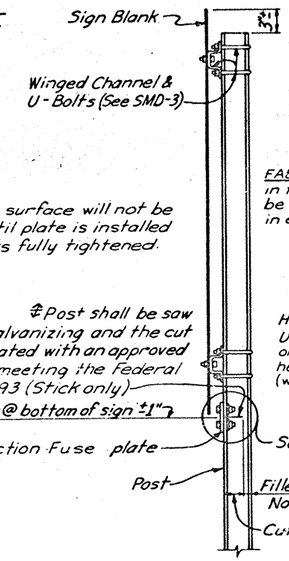
MAIN LANE BEAM MOUNT

TYPE G

This type beam mount to be used for Speed Limit sign IR-2 when used in combination with IR-3 & IR-2F.



PERMISSIBLE SHOP SPLICE

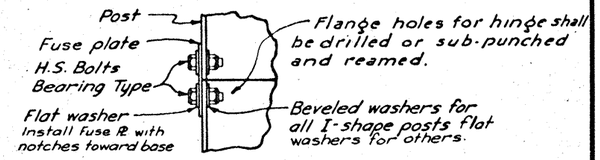


TYPICAL SIDE VIEW

‡ Note: Cut surface will not be treated until plate is installed and all bolts fully tightened.

‡ Post shall be saw cut after galvanizing and the cut surface treated with an approved zinc solder meeting the Federal Spec. O-G-93 (Stick only)

℄ Post cut @ bottom of sign ±1"



"DETAIL A" HINGE

FABRICATOR NOTE : IMPORTANT - All friction fuse bolts shall be tightened in the shop following a method approved by the Engineer. Tightening shall be to such a degree as to obtain the following minimum residual tension in each bolt:

Bolt Size	Min. Residual Bolt Tension
½" ϕ	12050 Lbs.
5/8" ϕ	19200 Lbs.
¾" ϕ	28400 Lbs.
7/8" ϕ	39050 Lbs.

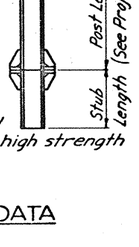
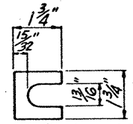
315.7	85.9#
417.7	119.9#

‡ Last figures = post wt. per ft.



Weight Data is the weight of items shown for one post - (includes 10' of post length, post foundation stub, related base connection plates and stiffeners, Friction Fuse ℞ and all high strength bolts, nuts and washers.)

POST WEIGHT DATA



Furnish 2 ∾ .012"± thick and 2 ∾ .032"± thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to A.S.T.M. - B36.

SHIM DETAIL

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen each bolt in turn and retighten bolts in a systematic order to the prescribed torque. (See Table)
4. Burr threads at junction with nut using a center punch to prevent nut loosening.

GENERAL NOTES:

Design conforms with AASHO Specifications for the design and Construction of Structural Supports for Highway Signs.

Materials and Fabrication shall conform to the requirements of Texas Highway Department Standard Specifications and Special Specifications.

All high strength bolts, nuts, and washers shall conform to ASTM-A325.

Notched steel fuse plates shall conform to the requirements of ASTM-A441. All holes shall be drilled. All plate cuts shall preferably be saw cuts, however; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be tolerated.

Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.

All bolts other than high strength bolts shall conform to ASTM-A307, Class A.

All structural steel, bolts, nuts, and washers shall be galvanized as per Item 442 of the Standard Specifications. Struct steel to be galv. after fabrication except as noted.

See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.

Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

Structural steel shall conform with the requirements of ASTM Specification A441.

Galvanizing of all posts shall be projection above concrete plus 6" minimum.

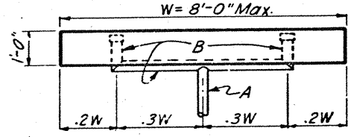
FRONTAGE ROAD PIPE MOUNTS
TYPES A & A-2

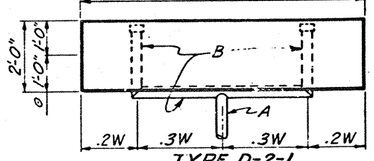
TYPE A - This type pipe mount to be used when one Route Marker is required, for IR-1A, IR-1G signs and other sign areas not exceeding 8 square feet.
TYPE A-2 - This type pipe mount to be used for any sign or combination of signs not exceeding a total of 4 square feet in area.



TYPE D-1-1
TYPE D-1-2
TYPE D-1-3

MAIN LANE & FRONTAGE ROAD PIPE MOUNT
TYPE A-1

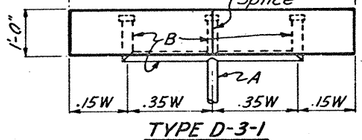
This type pipe mount to be used for a 36" Interstate Route Marker with a 24" Route Marker on Main Lanes or as a specified optional substitute for Type B.



TYPE D-2-1
TYPE D-2-2
TYPE D-2-3

FRONTAGE ROAD PIPE MOUNT
TYPE B

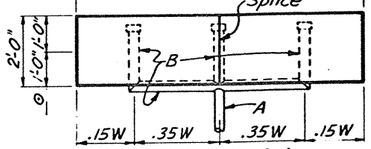
This type pipe mount to be used when 2 Route Markers of the same type or 2 Route Markers of different types are required.



TYPE D-3-1
TYPE D-3-2
TYPE D-3-3

FRONTAGE ROAD PIPE MOUNT
TYPE C

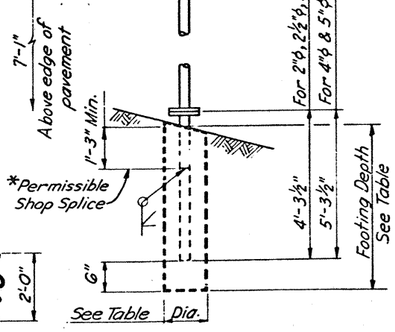
This type pipe mount to be used when 3 Route Markers are required.



TYPE D-4-1
TYPE D-4-2
TYPE D-4-3

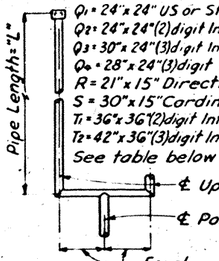
MAIN LANE PIPE MOUNT
TYPE C-1

This type pipe mount to be used for a 36" Interstate Route Marker with two 24" Route Markers.



FRONTAGE ROAD PIPE MOUNT
TYPE D

This type pipe mount to be used when 4 Route Markers are required.



MARKER COMBINATIONS	"L"
2P + 2Q + 2R + 7"	8'-7"
P + 2Q + 2R + 7"	7'-10"
2Q + 2R + 7"	7'-1"
Q + R + 3"	3'-6"
S + T + 3"	4'-6"
P + Q + R + 3"	4'-3"
P + Q + S + T + 7"	7'-7"

DIMENSION "S"

"S" = 1'-4½" for Q_1 or Q_2
"S" = 1'-7½" for Q_3
"S" = 1'-6½" for Q_4
"S" = 1'-10½" for T_1
"S" = 2'-1½" for T_2

Dimension "S" equals the distance from the ℄ of Upright to the ℄ of clearance between sign group.

MAIN LANE PIPE MOUNT
TYPE D-1

This type pipe mount to be used for a 36" Interstate Route Marker with three 24" Route Marers.

TYPE OF MOUNT	PIPE A	PIPE B	FOUNDATION	
			Footing Dia.	Footing Depth
D-1-1	3"ϕ	2"ϕ	1'-0"	4'-6"

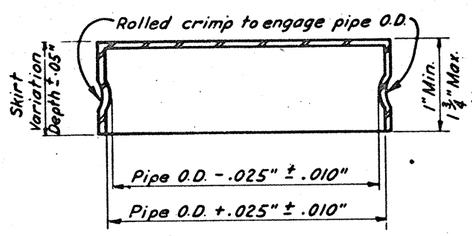
POST TO CROSS ARM

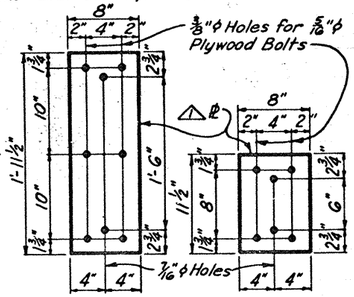
WELDED PIPE MOUNT DETAILS

NOTE:
The Contractor, at his option may furnish Standard Weight pipe conforming to A.S.T.M. Specification A-53, A-36, or Standard Weight pipe conforming to API5L, Grade B. Pipe made from materials conforming to the API5L Specifications shall meet all requirements of those specifications except that the Official API Monogram identification is not required.
Combinations of pipe material meeting different specifications may be used in the same project.
The pipe may be welded or seamless.
Hydrostatic tests are not required.

NOTES:
FRICTION CAPS— Caps may be manufactured from either hot rolled or cold rolled steel sheets. For pipe sizes 3½" and smaller the minimum sheet metal thickness shall be 24 gauge.
The rim edges shall be reasonably straight and smooth.
Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.
Caps shall have an electrodeposited coating of zinc in accordance with the requirements of A.S.T.M. Specification A164, Type G S.



FRICTION CAP DETAIL



⚠ May be ⅛"(A.S.T.M-A36) steel ℓ or 0.187" aluminum plate.

SPLICE ℓs

GENERAL NOTES:
Design conforms with A.A.S.H.O. Specifications For The Design And Construction Of Structural Supports For Highway Signs.
Material and fabrication shall conform to the requirements of Texas Highway Department Standard Specifications.
Aluminum splice plates shall conform with the requirements of A.S.T.M.-B-209 alloy 6061-TG, or A.S.T.M.-B.-221 alloy 6061-TG.
All structural steel, bolts, nuts and washers shall be galvanized as per Item 442 of the Standard Specifications except as noted. Galvanizing of all posts shall be projection above concrete plus 6" minimum.
All high strength bolts and washers shall conform to A.S.T.M.-A325. All high strength nuts shall be of such capacity as to develope the bolt strength.
Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.
All bolts other than high strength bolts shall conform to A.S.T.M.-A307, Class A.
See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.
Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

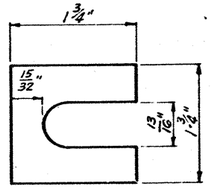
*BASE CONNECTION DATA TABLE

Nom. Pipe Size \ Dimension	Bolt Size & Torque	A	B	C	D	E	F	t	W
2"ϕ	½"ϕx 2" Torque=200'#	4½"	6¼"	1"	2½"	¾"	4¾"	½"	¼"
2½"ϕ		4½"	6¼"	1"	2½"	¾"	4¾"	½"	5/16"
3"ϕ	½"ϕx 2½" Torque=200'#	4½"	7"	1"	2½"	¾"	5½"	¾"	5/16"
3½"ϕ		5½"	7¾"	1"	3½"	¾"	6¼"	¾"	⅜"
4"ϕ		5½"	7¾"	1"	3½"	¾"	6¼"	¾"	⅜"
5"ϕ	⅝"ϕx 2¾" Torque=450'#	6½"	9¾"	1¼"	4"	⅛"	8"	1"	7/16"

*Plates for base connection shall conform with the requirements of A.S.T.M. A36. Payment will be included in price bid per linear foot of pipe.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:
1. Assemble post to stub with bolts and WITH ONE FLAT WASHER BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen.
4. Retighten bolts in a systematic order to the prescribed torque. (See Table)
5. Loosen each bolt and retighten to presribed torque in the same order as initial retightening.
6. Burr threads at junction with nut using a center punch to prevent nut loosening.



Furnish 2 ea .012"± thick and 2 ea .032"± thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to A.S.T.M.-B36.

(For 4I7.7 and 3I5.7 Shapes)

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen each bolt in turn and retighten in a systematic order to the presribed torque. (See Table)
4. Burr threads at junction with nut using a center punch to prevent nut loosening.

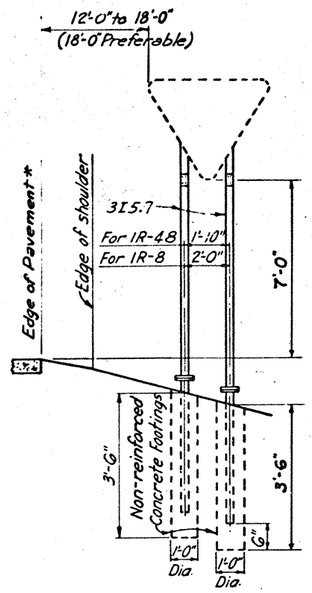
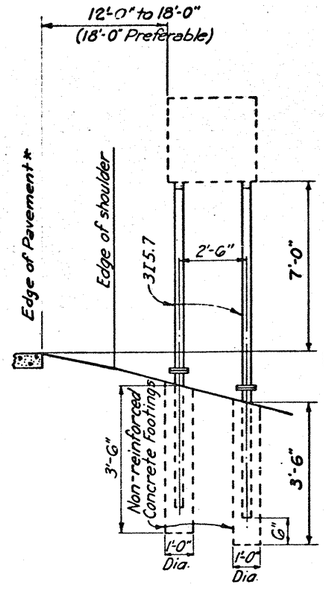
*Or face of mountable curbs. The clearance shall be 2'-0" min. for those signs at locations where there are unmountable curbs.



MAIN LANE BEAM MOUNT

TYPE F-1

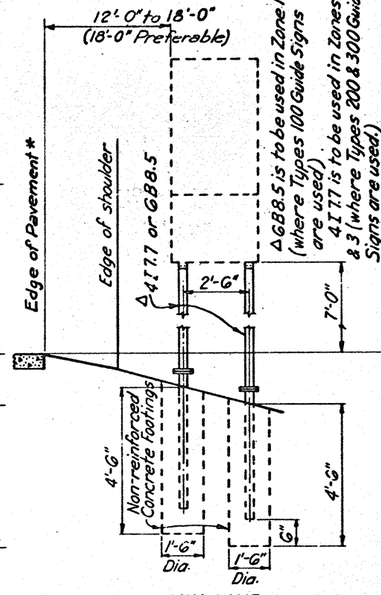
This type beam mount to be used to mount the IR-48 Yield Right of Way sign and the IR-8 No U Turn sign. Note the post spacing.



MAIN LANE & FRONTAGE ROAD BEAM MOUNT

TYPE F-2

This type beam mount to be used to mount the following signs: IR series - 2A, 4, 11, 12, 13, 14, 14A, 15, 17, 17A, 1B, 41, 50, 51 & 52. & IW series - 5-1, 13, 20A, 21, GO, & 4-2.

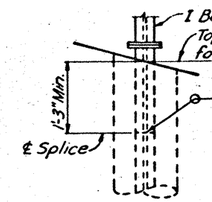


MAIN LANE BEAM MOUNT

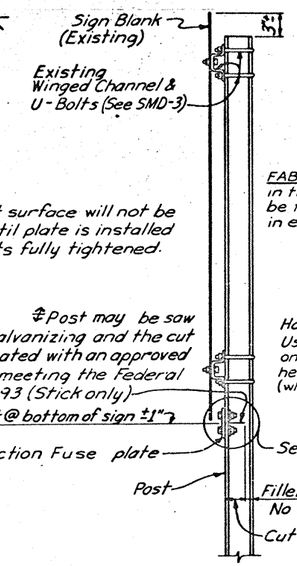
TYPE G

This type beam mount to be used for Speed Limit sign IR-2 when used in combination with IR-3 & IR-2F.

ELEVATION @ EDGE OF PAVEMENT



PERMISSIBLE SHOP SPLICE

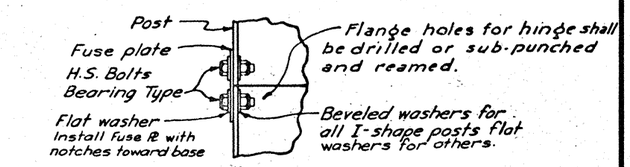


℄ Note: Cut surface will not be treated until plate is installed and all bolts fully tightened.

℄ Post may be saw cut after galvanizing and the cut surface treated with an approved zinc solder meeting the Federal Spec. O-G-93 (Stick only)

℄ Post cut @ bottom of sign ±1"

TYPICAL SIDE VIEW



"DETAIL A" HINGE

FABRICATOR NOTE : IMPORTANT - All friction fuse bolts shall be tightened in the shop following a method approved by the Engineer. Tightening shall be to such a degree as to obtain the following minimum residual tension in each bolt:

Bolt Size	Min. Residual Bolt Tension
1/2" ϕ	12050 Lbs.
5/8" ϕ	19200 Lbs.
3/4" ϕ	28400 Lbs.
7/8" ϕ	36050 Lbs.

STIFFENER ℝ DETAIL

GENERAL NOTES:

Design conforms with AASHO Specifications for the design and Construction of Structural Supports for Highway Signs.

Materials and Fabrication shall conform to the requirements of Texas Highway Department Standard Specifications and Special Specifications.

All high strength bolts, nuts, and washers shall conform to ASTM-A325.

Notched steel fuse plates shall conform to the requirements of ASTM-A441. All holes shall be drilled. All plate cuts shall preferably be saw cuts, however; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be tolerated.

Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.

All bolts other than high strength bolts shall conform to ASTM-A307, Class A.

All structural steel, bolts, nuts, and washers shall be galvanized as per Item 442 of the Standard Specifications. Struct steel to be galv. after fabrication except as noted.

See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.

Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

Structural steel shall conform with the requirements of ASTM Specification A441.

Galvanizing of all posts shall be projection above concrete plus 6" minimum.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble post to stub with bolts and WITH ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen each bolt in turn and retighten bolts in a systematic order to the prescribed torque. (See Table)
4. Burr threads at junction with nut using a center punch to prevent nut loosening.

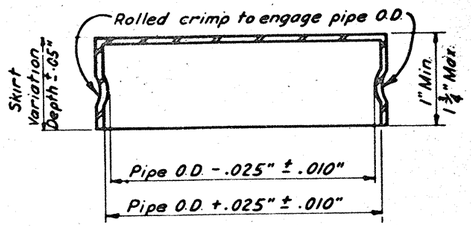
POST TO CROSS ARM

WELDED PIPE MOUNT DETAILS

NOTE:
The Contractor, at his option may furnish Standard Weight pipe conforming to A.S.T.M. Specification A-53, or Standard Weight pipe conforming to API5L, Grade B. Pipe made from materials conforming to the API5L Specifications shall meet all requirements of those specifications except that the Official API Monogram identification is not required.
Combinations of pipe material meeting different specifications may be used in the same project.
The pipe may be welded or seamless.
Hydrostatic tests are not required.

NOTES:
FRICTION CAPS— Caps may be manufactured from either hot rolled or cold rolled steel sheets. For pipe sizes 3½" and smaller the minimum sheet metal thickness shall be 24 gauge.
The rim edges shall be reasonably straight and smooth.
Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.
Caps shall have an electrodeposited coating of zinc in accordance with the requirements of A.S.T.M. Specification A164, Type G S.



FRICTION CAP DETAIL

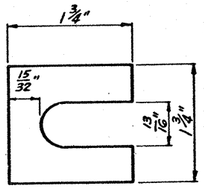
* Plates for base connection shall conform with the requirements of A.S.T.M. A36. Payment will be included in price bid per linear foot of pipe.

PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:
1. Assemble post to stub with bolts and WITH ONE FLAT WASHER BETWEEN PLATES.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with 12" to 15" wrench to bed washers and shims and to clean bolt threads then loosen.
4. Retighten bolts in a systematic order to the prescribed torque. (See Table)
5. Loosen each bolt and retighten to presribed torque in the same order as initial retightening.
6. Burr threads at junction with nut using a center punch to prevent nut loosening.



Furnish 2 ea .012" ± thick and 2 ea .032" ± thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to A.S.T.M. – B36.

SHIM DETAIL

GENERAL NOTES:
Design conforms with A.A.S.H.O. Specifications For The Design And Construction Of Structural Supports For Highway Signs.
Material and fabrication shall conform to the requirements of Texas Highway Department Standard Specifications.

All structural steel, bolts, nuts and washers shall be galvanized as per Item 442 of the Standard Specifications except as noted. Galvanizing of all posts shall be projection above concrete plus 6" minimum.
All high strength bolts and washers shall conform to A.S.T.M. – A325. All high strength nuts shall be of such capacity as to develope the bolt strength.
Tighten the high strength bolts in the base connection only to the torque shown, DO NOT OVERTIGHTEN.
All bolts other than high strength bolts shall conform to A.S.T.M. – A307, Class A.
See Standard Plan Sheets SMD-1 and SMD-3 for sign fastening details.
Where solid rock is encountered, footing shall be plan depth or extend two feet minimum into the rock.

GENERAL NOTES AND SPECIFICATION DATA:

ITEM 210: THE POWER ROLLER USED ON EMBANKMENTS AND FLEXIBLE BASES WILL BE PERMITTED ON SURFACE TREATMENTS.

ITEM 213: THE MEDIUM PNEUMATIC ROLLER (TY B) SHALL BE SELF-PROPELLED.

ITEM 300: ASPHALTS NOT LISTED FOR THIS PROJECT MAY BE PERMITTED BY WRITTEN CONCURRENCE BY THE ENGINEER. CERTIFICATION, TO THE SATISFACTION OF THE ENGINEER, FROM SUPPLIER, OF UNAVAILABILITY WILL BE REQUIRED.

ITEM 320: IN ORDER TO HAVE AN AGGREGATE FOR SURFACING THE PAVED SHOULDERS THAT WILL RESULT IN A PERMANENTLY CONTRASTING COLOR AND TEXTURE TO THE ASPHALTIC CONCRETE PAVEMENT ON THE ADJACENT TRAVELED LANES, CRUSHED LIMESTONE AGGREGATE SHALL BE USED FOR THE PAVED SHOULDERS.

ITEMS 320 & 322: THE TYPE AND GRADE OF ASPHALT AND RATE OF APPLICATION SHALL BE AS DIRECTED BY THE ENGINEER. GENERALLY AN ASPHALT CEMENT WILL BE USED DURING THE WARM SEASON (USUALLY APRIL 15TH TO SEPTEMBER 1ST). GENERALLY AN EMULSIFIED ASPHALT WILL BE USED DURING THE COOLER SEASON (USUALLY SEPTEMBER 1ST TO APRIL 15TH). UNLESS OTHERWISE DIRECTED BY THE ENGINEER, THE EMULSIFIED ASPHALT SHALL HAVE A RAPID SET WITH A MAXIMUM PENETRATION OF RESIDUE OF 150.

ITEMS 320 & 322: THE RATES OF APPLICATION AND THE ESTIMATED QUANTITIES OF AGGREGATE ARE BASED ON THE USUAL OR AVERAGE GRADATION OF KNOWN MATERIALS. PRIOR TO SHIPPING AGGREGATE TO THE PROJECT, THE CONTRACTOR SHALL FURNISH THE ENGINEER WITH SAMPLES OF AGGREGATE HE PROPOSES TO USE SO THAT THE GRADATION MAY BE DETERMINED AND RATE OF APPLICATION CHANGED IF NECESSARY. SURFACE TREATMENTS SHALL NOT BE APPLIED WHEN THE AIR TEMPERATURE IS BELOW 70 DEG. F AND IS FALLING BUT IT MAY BE APPLIED WHEN THE AIR TEMPERATURE IS ABOVE 60 DEG. F AND IS RISING. ASPHALTIC MATERIAL MAY BE PLACED BY PREHEATING AGGREGATE TO 280 DEG. F WHEN THE AIR TEMPERATURE IS 70 DEG. F AND FALLING OR WHEN THE AIR TEMPERATURE IS 50 DEG. F AND RISING.

ITEMS 320, 340 & 350: THE ASPHALTIC CONCRETE PAVEMENT SHALL BE IN PLACE FOR A SUFFICIENT PERIOD OF TIME IN THE OPINION OF THE ENGINEER TO PROPERLY DRY AND CURE BEFORE PLACING THE COLOR CONTRAST ONE-COURSE SURFACE TREATMENT.

ITEM 322: THE TWO-COURSE SURFACE TREATMENT SHALL BE IN PLACE FOR A SUFFICIENT PERIOD OF TIME IN THE OPINION OF THE ENGINEER, FOR THE SURFACE TREATMENT TO PROPERLY DRY AND CURE BEFORE PLACING THE ASPHALTIC CONCRETE PAVEMENT.

ITEM 340: SEMI-TRAILER VEHICLES WILL BE PERMITTED TO DUMP DIRECTLY INTO THE FINISHING MACHINE ON ALL COURSES. IF SEMI-TRAILERS ARE USED ON THE WEARING SURFACE COURSE, THE TRAILERS SHALL BE SO DESIGNED THAT NO ADDITIONAL LOAD, OTHER THAN THE ASPHALTIC MATERIAL, SHALL BE APPLIED TO THE FRONT OF THE SPREADING AND FINISHING MACHINE.

ITEM 340: THE CONTRACTOR'S ATTENTION IS DIRECTED TO SPECIFICATION ITEM 501 "AUTOMATIC SCREED CONTROLS FOR ASPHALT SPREADING AND FINISHING MACHINES" WHICH IS INCLUDED IN THE SPECIFICATIONS FOR THIS PROJECT.

ITEM 340: LIME (TY A OR B) SHALL BE ADDED TO THE MINERAL AGGREGATE AT THE RATE OF 1/2 OF 1% BY WEIGHT, IF COMBINED MINERAL AGGREGATE, PRIOR TO ADDITION OF ASPHALT AND MINERAL FILLER, HAS A SAND EQUIVALENT VALUE OF LESS THAN 45. THIS LIME WILL BE ADDED TO THE

GENERAL NOTES AND SPECIFICATION DATA:

AGGREGATE AT THE COLD FEEDER BELT BY MEANS OF A VIBRATING OR RECIPROCATING HOPPER WITH ATTACHED WATER SPRAYER OR ANY OTHER SUITABLE DEVICE APPROVED BY THE ENGINEER. THIS LIME WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE INCLUDED IN THE PRICE BID FOR ITEM 340, "HOT MIX ASPHALTIC CONCRETE PAVEMENT".

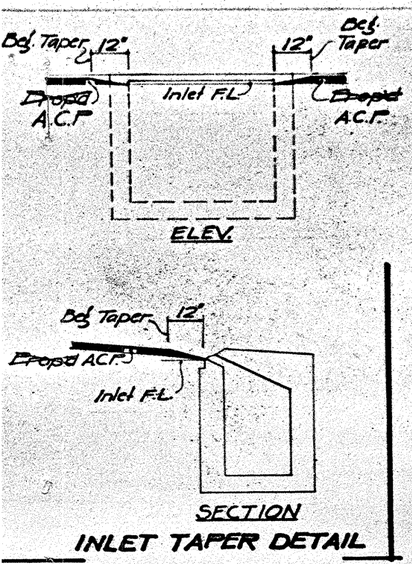
ITEMS 340 & 350: IN ADDITION TO THE TACK COAT MATERIALS SPECIFIED IN THESE STANDARD SPECIFICATIONS, THE CONTRACTOR, IF HE SO DESIRES, MAY USE EA-HVMS.

ITEMS 340 &350: THE POINT OF SAMPLING FOR TESTS TEST METHOD TEX-217-F (PART I AND PART II) SHALL BE THE COARSE AGGREGATE STOCKPILE. CRUSHING OF GRAVEL WILL NOT BE REQUIRED.

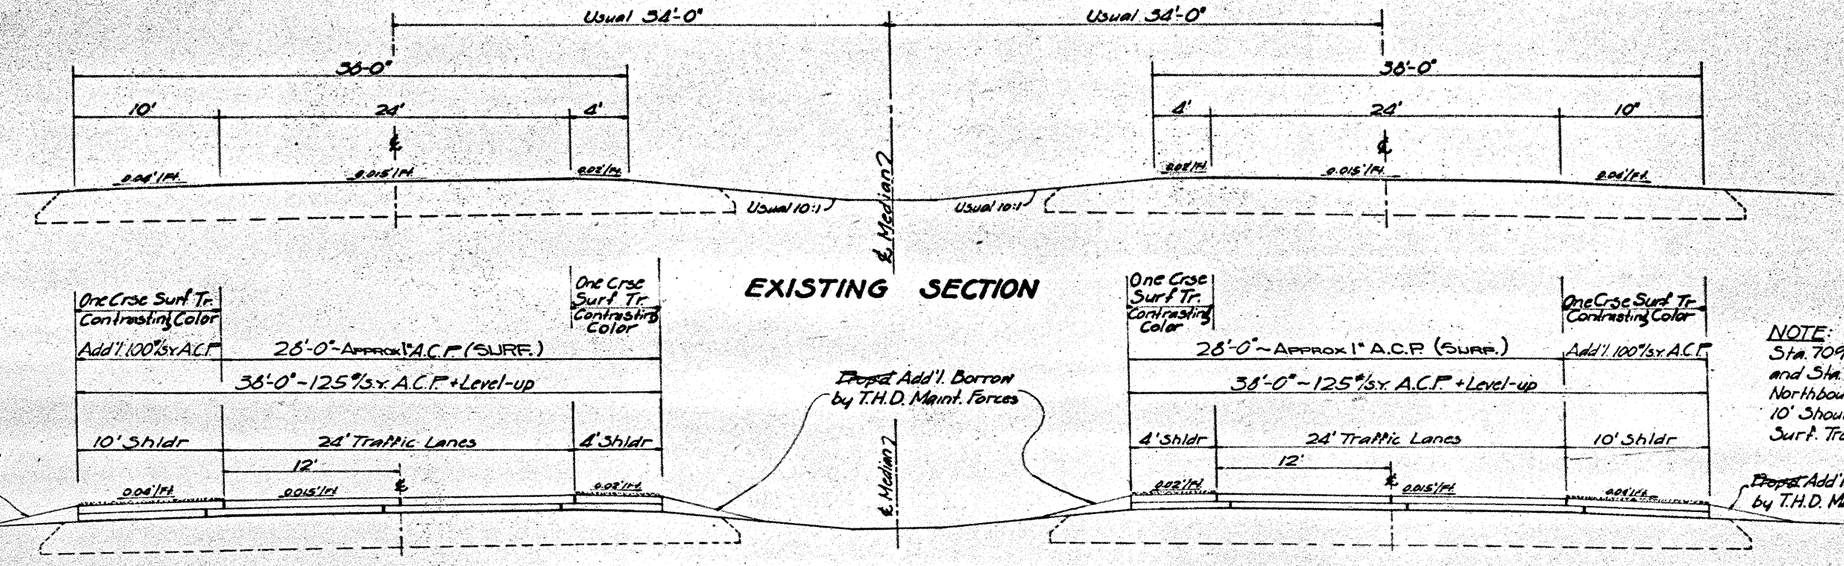
ITEMS 340 & 350: THE COARSE AGGREGATE USED IN THE SURFACE OR FINISH COARSE SHALL HAVE A "POLISH VALUE" OF NOT LESS THAN 35 WHEN TESTED IN ACCORDANCE WITH TEST METHOD TEX-438-A.

ITEM 5001: THE SQUARE FOOTAGE REQUIREMENTS IN THIS SPECIAL SPECIFICATION ARE NOT APPLICABLE TO THIS PROJECT.

SPEC PROV 000---004: THE NUMBER OF TRAINEES IS 2.

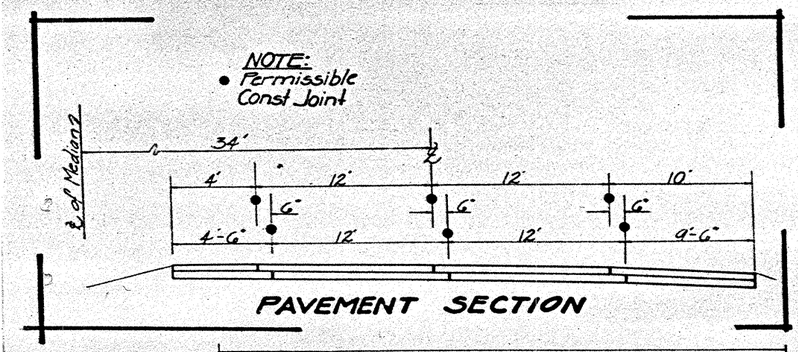


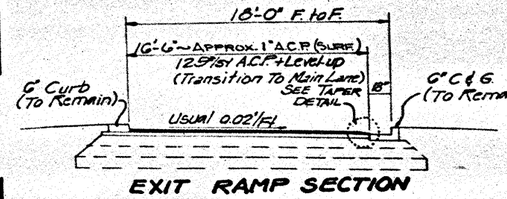
INLET TAPER DETAIL

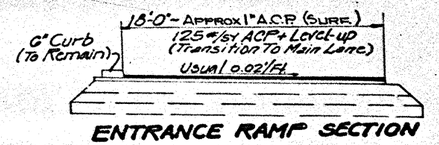


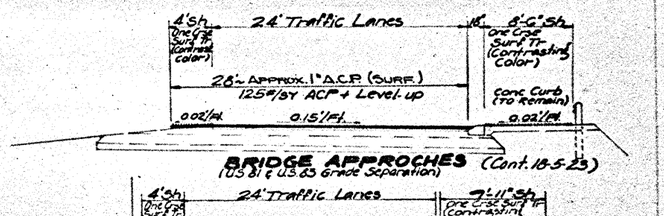
NOTE: (Control 18-5-23) Sta. 709+60 to Sta. 714+40 and Sta. 715+60 to Sta. 726+16 Northbound & Southbound lanes 10' Shoulder will receive One Crse Surf. Treat. (Contrasting Color) ONLY

~~DROP'T~~ PAVEMENT OVERLAY SECTION









Note: All bridge decks (Cont. 18-6-56) Will be surfaced the full width (38') with two Crs. Surf. Treat. & Approx. 1" A.C.P. 4' & 10' shoulders will take 1 CST (Color Cont.)

General Notes:

General Notes and Specifications Data

The following Standard Detail Sheets have been modified:

CH-PW-S	IL-HSTDE	IBA	IBB	IBTS
CH-PW-O	MH-M	IBMS	IBDO	PCP(C)
MEBR(C)-2	SSTR	PMDF(C)	TS-FD-99	

---General---

For this project, partnering ~~shall be~~ mandatory.

The Contractor ~~will be~~ required to clean all drainage structures within the project limits as directed by the Engineer. This work ~~will~~ not be paid for directly but ~~shall be~~ considered incidental to the various pay items.

The Contractor ~~shall be~~ responsible for maintaining an accurate vertical and horizontal control throughout the contract.

References to manufacturer's trade or catalog numbers are for the purpose of identification only, and the Contractor ~~will be~~ permitted to furnish like materials of other manufacturers provided they are of equal quality and comply with specifications for this project and are approved by the Engineer.

Uniroyal road ~~shall be~~ open to traffic at all times. Access to all drives and side roads, both public and private, are to be maintained at all times.

All debris as directed by the Engineer ~~shall~~ become property of the Contractor and it ~~shall be~~ his/her responsibility to properly dispose of it.

The Contractor's attention is directed to the fact that both overhead and underground utilities may exist in the vicinity of the construction. The exact location of underground utilities is not certain. The Contractor ~~shall~~ contact utility companies in that area for exact locations at least 48 hours prior to drilling or commencing any work to prevent any damage or interference with present utilities. This action however, ~~shall~~ in no way be interpreted as relieving the Contractor for his/her responsibilities under the terms of the contract as set out in the plans and specifications. The Contractor ~~shall~~ repair any damage caused by his/her operations at his/her own expense and ~~shall~~ restore facilities to service in a timely manner.

Project Number: NH-2002 (79) **Sheet** 7

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

During the execution of the work, utmost care ~~shall~~ be exercised to prevent damage to any utilities, structures, or right-of-way. The Contractor is not allowed to enter, stage construction, or stockpile material within the Union Pacific Railroad R.O.W.

The Contractor ~~shall~~ be responsible for contacting, locating, and protecting all underground utilities and structures. The Engineer may assist the Contractor in locating underground utilities and structures; however, any damage to existing utilities or structures ~~shall~~ be repaired at the Contractor's expense. If in the course of the work, underground utilities or structures are encountered and are in conflict with the work, the Contractor ~~shall~~ contact the Engineer who will direct the necessary adjustments. Changes of this nature are considered incidental to the contract work and ~~shall~~ not entitle the Contractor to additional compensation.

Upon completion of this project, as built drawings of all wiring ~~shall be~~ provided to TxDOT via electronic files.

All construction equipment involved in roadway work on or within 30 feet of the roadway ~~shall be~~ equipped with permanently mounted approved 360 degree revolving or strobe warning light with amber lens. This light ~~shall~~ have a minimum lens of 5 inches and a diameter of 5 inches. This light ~~shall~~ have a mounting height of not less than 6 feet above the roadway surface and ~~shall be~~ visible from all sides. This equipment ~~shall~~ also have attached at each side of the rear end of the vehicle an approved orange warning flag mounted not less than 6 feet above the roadway surface.

The Contractor ~~shall~~ protect all areas of the right of way which are not included in the actual limits of the proposed construction areas from destruction. Care ~~shall~~ be exercised to prevent damage to trees, vegetation and other natural surroundings. The areas not disturbed ~~shall be~~ determined by the Engineer prior to beginning the work. The Contractor, at his expense, ~~shall~~ restore any area disturbed as a result of his operations to a condition as good as, or better than, that present prior to his contract.

Erection and/or removal of poles and luminaires located near any overhead or underground electrical lines ~~shall be~~ accomplished using established industry and utility safety practices. The Contractor ~~shall~~ consult with the appropriate utility company prior to beginning such work.

If any overhead or underground electrical lines need to be de-energized, the Contractor ~~shall~~ call the power company to do this work. Any cost associated with de-energizing the electrical lines and/or any other protective measures required ~~shall be~~ at the Contractor's expense.

When the Contractor is working near any power lines, it is his/her responsibility to comply with the appropriate sections of Texas state law and federal regulations relating to the type of work involved. At the Contractor's option, electrical grounding connections and permissible splices

~~may be~~ made by the thermal fusion process, cadweld, thermaweld or equal, in lieu of bolted connections and splices.

Convenience outlets equipped with ground fault interrupter (GFCI) protection ~~shall not be~~ used to supply power to any electronic equipment.

Basis of Estimate

168--Vegetative Watering 33.94 mg/acre/application
four (4) applications

316--Surface treatments (one course)
Asphalt (Ac-15-5TR) 0.24 gal/sy
aggregate (TY PE, GR 3) 1 cy: 120 sy

3231--Porous Friction Crse Eliminated by C.O. 96.0 lbs/sy/in
Asphalt (PG 76-22) 6% by weight
Aggregate (CL A) 94% by weight
Tackcoat-ss1 or ss2 cut 50% by water
0.06 gal residual asphalt

3249--SFHMACP Crse (PG 76-22 Asph)(1") 110.0 lbs/sy/in
(1") nominal aggregate size

3249—SFHMACP Crse (PG 76-22 Asph) (3/4") 110.0 lbs/sy/in
(3/4") nominal aggregate size

3241—SPHMACP Crse (PG 70-22 Asph) (1/2") 110.0 lbs/sy/in
(1/2") nominal aggregate size

3248—HDSMACP Crse (pg 76-22 Asph) (1/2") 110.0 lbs/sy/in
(1/2") nominal aggregate size
3/4"

Intelligent Transportation System – General

Prior to beginning any work in the area of any existing fiber optic cable or its equipment, the contractor ~~shall~~ advise the engineer 72 hours before beginning any work.

The contractor ~~shall~~ maintain the integrity of the existing cables, conduit, and ground boxes contiguous to the section of cables to be removed. If the cable(s), conduit and ground boxes are damaged during work, the contractor ~~shall~~ repair or replace the damaged cable(s), conduit or

ground boxes at the contractor's expense. The replacement or repair method ~~shall be~~ approved by the engineer prior to implementation. Maintaining the integrity of the existing cable(s), conduit and ground boxes during the work ~~shall be~~ considered subsidiary to this item and ~~shall not be~~ paid for directly.

When pulling cables or conductors through conduit, manufacturer's recommended pulling tensions ~~shall not be~~ exceeded and the cables or conductors ~~shall be~~ lubricated with a lubricant as recommended by the cable manufacturer.

All electrical work done ~~shall be~~ in conformance with the National Electrical Code (NEC). Adhesive backed cable restraints ~~shall not be~~ allowed for Electronic components.

All conductors ~~shall be~~ continuous without splices from terminal point to terminal point or as otherwise directed by the engineer. No splicing of cables ~~shall be~~ permitted in ground boxes.

Intelligent Transportation System work: General

The equipment expansion and integration ~~shall be~~ 100% fully compatible and interoperable with TxDOT's STRATIS Traffic Management Center.

This contractor ~~shall~~ consist of furnishing, installing, testing and integrating the following components into the existing STRATIS operations. The contractor ~~shall~~ select this equipment to achieve complete and fully functional interoperability with the existing installation and STRATIS operations.

All elements of the contract ~~shall be~~ integrated into the existing user interface, including all necessary hardware and software to ensure 100% full compatibility and functionality without any degradation to the existing system.

Item 4 Scope of Work

Aggregate stockpiles remaining on State's right of way 30 days after project's "final acceptance" will become the property of the Texas Department of Transportation. Aggregate stockpiles deemed undesirable by the Engineer ~~shall be~~ removed in accordance with the pertinent specifications of this project.

Item 5 Control of the Work

To ensure accurate measurement for final pay quantities and to facilitate the Engineer's check on the Contractor's survey work, the Contractor ~~shall be~~ required to set construction stakes based

REVISED 07-29-03

8

on plan stations and at 50 foot maximum intervals or as directed by the Engineer.

Item 6 Control of Materials

The Contractor ~~will be~~ required to furnish the area Engineer the maximum gross weights, including loads, for all vehicles, including trucks, truck-tractors, trailers, semi-trailers or any combination of such vehicles used to deliver materials to the project. Maximum gross weights are to be determined in accordance with item 6 article 6.7 of the standard specifications.

Item 7 Legal Relations and Responsibilities to the Public

This project requires permit(s) with environmental resource agencies. There is a high probability that environmentally sensitive areas will be encountered on Contractor designated project specific locations (PSL) for the project (haul roads, equipment staging areas, parking areas, etc.) special provision 007-784 to item 7, "legal relations and responsibilities to the public", provides listings for regulatory agencies that may need to be contacted regarding this project.

The department has been authorized to perform work within designated areas of the project under U.S. Army Corps of Engineers (USACE) Nationwide Permit (NWP) #14.

The Contractor ~~shall not~~ initiate activities in a project specific location (PSL) associated with a USACE permit area that have not been previously evaluated by the USACE as part of the permit review of this project. Such activities include, but are not limited to, haul roads, equipment staging areas, borrow and disposal sites. Associated defined here means materials are delivered to or from the PSL. The permit area includes all waters of the U.S. or associated wetlands affected by activities associated with this project. Special restrictions may be required for such work. The Contractor ~~shall be~~ responsible for any and all consultants with the USACE regarding activities, including project specific locations (PSL), that have not been previously evaluated by the USACE. The Contractor ~~shall~~ provide the department with a copy of all consultantions(s) or approval(s) from the USACE prior to initiating activities.

The Contractor may proceed with activities in PSL that do not affect a USACE permit area if a self determination has been made that the PSL is non-jurisdictional or proper USACE clearances have been obtained in jurisdictional areas or have been previously evaluated by the USACE as part of the permit review of this project. The Contractor is solely responsible for documenting any determination(s) that their activities do not affect a USACE permit area. The Contractor ~~shall~~ maintain copies of their determination(s) for review by the department or any regulatory agency.

The Contractor must document and coordinate with the USACE, if required, prior to any excavation hauled from or embankment hauled into a USACE permit area by either (1) or (2) below.

Project Number: NH-2002 (79) **Sheet** 9

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

(1) **Restricted use of materials for the previously evaluated permit areas.** The Contractor ~~will~~ document both the PSL and their authorization. The Contractor ~~will~~ maintain copies for review by the department or any regulatory agency. When an area within the project limits has been evaluated by the USACE as part of the permit process for this project:

A. Suitable excavation of required material in the areas shown on the plans and cross sections as specified in item 110 is used for permanent or temporary fill (item 132, embankment) within a USACE permit area;
B. Suitable embankment (item 132) from within the USACE permit area is used as fill within a USACE evaluated area; and
C. Unsuitable excavation or excess excavation ["waste"] (item 110) that is disposed of at a location approved by the Engineer within a USACE evaluated area.

(2) **Contractor materials from areas other than previously evaluated areas.** The Contractor will provide the department with a copy of all USACE coordination or approval(s) prior to initiating any activities for an area within the project limits that has not been evaluated by the USACE or for any off right of way locations used for the following, but not limited to, haul roads, equipment staging areas, borrow and disposal sites:

A. Item 132, embankment, used for temporary or permanent fill within a USACE permit area; and,
B. Unsuitable excavation or excess ["waste"] (item 110, excavation) that is disposed of outside a USACE evaluated area.

Item 8 Prosecution and Progress

The contractor ~~shall not~~ start actual construction until this March 1st, 2004 unless a written authorization has been granted by the Engineer.

Unless otherwise authorized by the Engineer, all obstructions, objectionable material and concrete ~~shall be~~ disposed of by hauling it off the project and out of sight from state highways to disposal sites arranged for by the Contractor and satisfactory to the Engineer. The area outside the clear zone or back slope intercept line, whichever is greater, ~~shall~~ remain in its natural condition, unless otherwise directed by the Engineer.

For this project, the Critical Path Method (CPM) shall be mandatory.

Item 110 Excavation

REVISED 07-29-03

All hauling of materials will not be paid for directly, but ~~shall be~~ considered as subsidiary to the bid items involved. Excess excavation ~~shall be~~ placed in areas as shown in the plans and as directed by the Engineer. The fill area designated by the Engineer ~~shall be~~ within one mile of the project limits.

Item 132 Embankment

The percent of density, as determined by test method Tex-113-E, ~~shall be~~ a minimum of 95 percent. Density tolerances will be permitted.

The Contractor's attention is called to the fact that the following note for this item applies to any material used for embankment other than that which was excavated from the roadway. Excavation of material which would be used for embankment and would result in creating a pit 5 feet or greater below natural ground within 200 feet of any road designated or maintained as a part of the system of roads under the jurisdiction of TxDOT, except in areas designated in the plans, ~~will not be~~ permitted without the written approval of the Engineer and such excavation of material within 200 feet of the outside edge of the travel lane ~~will not be~~ permitted without the consent of the governmental agency which has jurisdiction of the road.

The securing of embankment material by the excavation of ditches for beneficial drainage purposes, the removal of spoil banks, and the removal of hills for land leveling within 200 feet of any public road will be permitted, provided that selection criteria is met. Existing borrow pits may be extended to no closer than present clearance or the 200 feet clearance cited above, provided there is adequate natural or planted vegetative screening as determined by the Engineer.

Type C Embankment ~~shall~~ have a max. P.I. of 40 except that embankment material in the top two feet below the bottom of the flexible base ~~shall~~ such as to produce a well-bonded embankment and ~~shall~~ have a minimum P.I. of 8 and a maximum P.I. of 30 as determined by preliminary tests and such other tests found necessary by the Engineer

The Contractor's attention is called to the fact that the preliminary test will require approximately 15 days and it is the Contractors responsibility to advise the Engineer of the location of the source sufficiently in advance to avoid delay.

Item 164 Seeding for Erosion Control

Cellulose fiber mulch seeding ~~shall be~~ applied in areas designated on the plans or as directed by the Engineer. Prior to seeding, the areas designated shall be finished to a smooth surface for a uniform application of seed.

Project Number: NH-2002 (79) **Sheet** 10

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Seeding ~~shall be~~ accomplished by the hydromulch method in two applications as shown below:
1st application – Grass seed and fertilizer
2nd application -Cellulose fiber mulch ~~shall be~~ applied according to a rate shown in the Standard Specification book.
Fertilizer ~~shall be~~ applied at the rate of 100 pounds of Nitrogen per acre. Fertilizer ~~shall be~~ homogenized.

Reseeding:
Areas requiring reseeding due to the non-establishment of sufficient vegetative cover, ~~shall be~~ reseeded in accordance with items 164 and 168. The cost for reseeding ~~shall be~~ paid for by the state provided that the Contractor has followed the seeding and watering requirements as specified in Items 164 and 168.

Seed mixture:
Seed mixture ~~shall be~~ as specified under item 164. Cool season or warm season grasses ~~shall be~~ included as part of Item 164 (see table 4a or 5 in the standard specification manual for dates and seed type).

Item 166 Fertilizer

Areas to receive fertilizer are the same as shown for Item 164.

Item 168 Vegetative Watering

Water ~~shall be~~ applied uniformly over areas after seeding or sodding as directed by the Engineer in accordance with applicable provisions of item 168 "Vegetative Watering". In addition, the Contractor ~~shall be~~ responsible for a 70% grass coverage in order to comply with stabilization requirements. Vegetative coverage ~~shall be~~ uniform. During this period, water equipment ~~shall be~~ metered and operated under pumping pressure capable of delivering the required quantities of water necessary. Each cycle ~~shall be~~ executed every two (2) days, or as directed by the Engineer.

Water ~~shall be~~ applied in such a manner as to ensure adequate moisture and be maintained on the grass seeding and not erode the soil in place. During periods of adequate moisture as determined by the Engineer, mechanical watering may not be required. In addition to metering the water equipment, the Contractor ~~shall~~ upon request of the Engineer, provide a log book showing daily water usage and receipts of water applied.

Upon establishment of 70% vegetative coverage as determined by the Engineer, the Engineer ~~shall~~ have the option to require the Contractor to continue watering as specified for a period not to exceed 30 days.

REVISED 07-29-03

Item 300 Asphalts, Oils and Emulsions

Asphalt binder used for all asphaltic concrete mixtures ~~shall~~ meet the requirements of each item as noted in the estimate, unless otherwise noted in the plans.

Item 301 Asphalt Anti Stripping Agents

The addition of 1.5 percent Type A hydrated lime based on the dry weight of aggregate is required. Lime ~~shall be~~ added in dry form in a suitable pugmill mixer. This note applies to all HMAC specifications except for SS 3231 Porous Friction Course.

Item 354 Planing and/or Texturing Pavement

For Depressed Shoulder texturing (asphalt), a continuous milled depression ~~shall be~~ used in the areas shown in the plans. This work will not be paid for directly but ~~shall be~~ considered incidental to Item 354.

The placement of concrete pavement between May 15th and October 1st ~~shall be~~ during nightime hours (commencing at 7 p.m. with all paving operations being completed by 8:00 a.m. of the following morning and as directed by the Engineer.

Item 360 Concrete Pavement

The placement of concrete pavement between May 15th and October 1st ~~shall be~~ during nightime hours (commencing at 7 p.m. with all paving operations being completed by 8:00 a.m. of the following morning and as directed by the Engineer.

Item 400 Excavation and Backfill for Structures

Cement stabilized backfill ~~shall~~ contain aggregate, water and a minimum of 3.0 sacks of Portland cement per cubic yard of material. Cement and water ~~shall~~ conform to the requirements of item 421 "Portland Cement Concrete". Aggregate ~~shall be~~ clean sand or other suitable material and ~~shall be~~ subject to the approval of the Engineer.

If the Contractor elects to cut pavement (existing / detour) for structural work beyond that required by the construction phasing shown in the plans and approved by the Engineer, it ~~shall be~~ restored at his expense and backfilled to its original condition or better in accordance with item 400.

Project Number: NH-2002 (79) **Sheet** 11

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Item 416 Drilled Shaft Foundations

The Contractor ~~shall~~ probe before drilling foundations to determine the locations of all underground utilities and structures.

The Contractor ~~shall~~ notify the inspector and/or the traffic section with 24 hours anticipation for the staking of the traffic signal foundation locations, after all utilities have been located.

Item 420 Concrete Structures

Concrete for bents ~~shall be~~ paid as plan quantity.

Item 421 Portland Cement Concrete

Transverse construction joints for box culverts and/or box siphons ~~will be~~ allowed at change of grade and/or alignments. These joints ~~will be~~ required at intervals not greater than 60 feet, nor less than 40 feet, unless otherwise approved by the Engineer.

Class "A" concrete used in the structural application within the limits of the paved roadway, will require a minimum of one (1) set of beams per day of production.

The Contractor ~~shall be~~ responsible for all concrete test beams for flexural strength. Test beams ~~shall be~~ done by a TxDOT approved lab and the results ~~shall be~~ maintained in record form and furnished daily to the TxDOT project Engineer.

The Contractor ~~shall~~ notify TxDOT at least seven (7) calendar days prior to the "pre-pour" meeting of the construction of the first bridge deck. The meeting ~~shall be~~ attended by TxDOT, the Contractor, and sub-Contractor(s) responsible for the work.

Item 423 Retaining Walls

All retaining wall panels ~~shall be~~ precast, unless otherwise directed by the Engineer. Individual panels ~~shall~~ not exceed 50 square feet in size.

The Contractor ~~shall~~ provide and maintain positive drainage away from the wall system (including the leveling pad) at all times for the duration of the contract.

Retaining Wall P (from Sta. 398+05 to Sta. 411+50) located along the Northbound Frontage Road at Carrier Drive ~~shall be~~ constructed first; before any work is done on the adjacent IH 35

REVISED 07-29-03

11

mainlanes. This work must be coordinated with the Traffic Management System and any storm sewer system in the immediate vicinity.

Backfill for MSE wall shall be Type "A".

Top of wall footing is to be set at a minimum of one foot below existing grade or finished grade, whichever is lower.

The following MSE panel type systems are approved for use on TxDOT projects:

REINFORCED EARTH WALLS
THE REINFORCED EARTH COMPANY
1331 AIRPORT FREEWAY, SUITE 302
EULESS, TEXAS 76040-4150
(817) 283-5503

RETAINED EARTH WALLS
FOSTER GEOTECHNICAL
901 NORTH HIGHWAY 77
HILLSBORO, TEXAS 76645
(254) 580-9100

REINFORCED SOIL EMBAMKMENT WALLS
TEXAS WELDED WIRE, INC.
645 W. HURST BLVD.
HURST, TEXAS 76053
(817) 282-4560

STRENGTHENED EARTH WALLS
HANSON CONCRETE PRODUCTS
3500 MAPLE AVE.
DALLAS, TEXAS 75219
(214) 525-5877

TRICON RETAINED SOIL WALLS

Item 425 Prestressed Concrete Structural Members

Where road closures or detours around structures are necessary to accomplish proposed work, the removal of existing structures and/or cutting of existing pavement ~~will not be~~ permitted until all precast and/or prestressed members for the proposed structure have been cast, tested and approved for use.

Item 432 Riprap

Proposed riprap for embankment slopes under bridge ends ~~shall be~~ constructed in accordance with standard sheet CRR.

Item 446 Cleaning, Paint and Painting

Source of Supply: All paint ~~shall be~~ purchased from the department. Paint ~~shall be~~ charged to the Contractor at the following prices:
Protection System in Prime Coat----$75.90---per 5 gallon bucket
Appearance Coat (Gray)----------$80.80---per 5 gallon bucket

All priming ~~shall be~~ done in such a manner and sequence that no prime coat ~~shall be~~ deposited on the finish coat.

REVISED 07-29-03

12

The attention of prospective bidders is directed to ordinance and regulations of local municipal and county government and the Texas Air control Board which are applicable to this project.

The Contractor's attention is called to requirements of article 446.4. The Contractor ~~shall~~ notify the Director, equipment and procurement Division, in Austin within 30 days after the date of the authorization to begin work. This written notification ~~shall~~ include the approximate quantities of each type of paint to be used and the anticipated delivery dates required for any paints being purchased from the department.

Item 450 Railing

Metal beam guard fence terminal connectors are required. For this item, white Portland Cement will be required.

Item 462 Concrete Box Culverts and Sewers

Joints in precast concrete box culverts shall be made using any of the methods specified in the item 464, except mortar joints or rubber gasket joints.

The concrete box culvert ~~shall be~~ precast, except as noted on plans, to expedite handling of traffic. Cast in place boxes ~~will be~~ constructed as shown on standard for single barrel boxes and standard details for multiple box culverts.

Aggregate for cement stabilized backfill ~~shall be~~ clean sand or other suitable material and ~~shall be~~ subject to the approval of the Engineer.

On single and/or multiple box culvert construction near existing traffic, the Contractor ~~shall~~ work expeditiously to complete all work on the structure including placement of pipe runners, required safety treatment or railing, backfilling, etc. The portion of roadway which is not handling traffic due to the culvert construction ~~will not be~~ opened to traffic until all work as described above and shown on the TCP has been completed.

Item 464 Reinforced Concrete Pipe

Tongue and groove pipe will be required for installations where part of the structure may protrude into the lime treated subgrade.

The 4 feet depth restriction for heavy equipment passage over pipe structures is voided. The Contractor will be responsible for any construction damage to these facilities.

Item 466 Headwalls and Wingwalls

Project Number: NH-2002 (79) **Sheet** 13

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Concrete for all headwalls and wingwalls shall be class "C".

Item 470 Manholes and Inlets

Where required on the plans, manholes and inlets are to be built to stage I construction, covered with temporary pavement, and completed in a later phase of construction. This work ~~shall be~~ considered incidental to the various bid items.

Where manholes and inlets are to be placed in paved areas, they ~~shall~~ first be constructed to an elevation such that their temporary steel plate will be flush with the surface of the base material.

Where manholes and/or inlets are to be built complete in graded areas, they ~~shall~~ first be constructed to an elevation at least 4 inches above the top of the highest entering pipe and covered with a steel plate. Upon completion of the grading work where such manholes or inlets are constructed, the Contractor ~~shall~~ complete the construction of such manholes or inlets to the finished elevation. The finished elevation shown in the plans is approximate and ~~shall be~~ adjusted by the Contractor, if required, subject to approval of the Engineer. All grates will be welded to the frames in a manner satisfactory to the Engineer.

Item 471 Frames, Grates, Rings and Covers

All manholes located on paved surfaces will be constructed with a cover of the type that will enable it to be bolted to the ring.

Item 496 Removing Old Structures

Unless otherwise authorized by the Engineer, all obstructions, objectionable material and old concrete ~~shall be~~ disposed of by hauling it off the project and out of sight from state highways to disposal sites arranged for by the Contractor and satisfactory to the Engineer.

Item 502 Barricades, Signs and Traffic Handling

The Contractor ~~shall~~ coordinate the sequence of construction and traffic control plan with any adjacent construction projects to insure the uninterrupted flow of traffic.

The traffic control plan for this project ~~shall be~~ as shown in the plans, as detailed on the "Barricade and Construction Standard" sheets and as provided for in the "Texas Manual on Uniform Traffic Control Devices".

The Engineer reserves the right to instruct the Contractor to postpone construction of phase II, step 3 of the Traffic Control Plan. Contractor ~~shall~~ proceed with other phases of construction until instructed by the Engineer to complete the remaining work of phase II.

REVISED 07-29-03

Construction Signs and Barricades designated to be left in place upon completion of this project ~~shall be~~ restored to a condition acceptable to the Engineer before releasing them to the state.

Unless otherwise indicated in the plans, all Barricades, Warning Signs, and Flasher Lights within the limits of this project existing from previously completed projects ~~will be~~ maintained and removed by the Contractor as directed by the Engineer.

Two weeks prior to any alterations on traffic patterns, the Contractor will provide, for approval by the Engineer, a layout showing all Signs, Barricades, Striping and Signalization.

Plastic Drums ~~shall be~~ used in accordance with the plans and manufacturers recommendations, as approved by the Engineer.

For this project, where the designation of urban or rural occurs in the barricade and construction standards for construction signs to regulate, warn and guide traffic in advance of and within the project limits, including cross roads, the urban mounting heights ~~shall~~ apply.

For this project the Contractor will furnish and maintain all barricades and warning signs, including all temporary and portable traffic control devices necessary during the various phases of construction. These Barricades and Warning signs ~~shall be~~ constructed and placed in accordance with the Barricades and Construction standards, Texas MUTCD, and typical construction layouts, or as directed by the Engineer.

Existing signs that are not being used during construction ~~shall be~~ covered with burlap, black polypropylene, or other acceptable material or removed. Existing signs that need to be displayed ~~may be~~ removed and relocated or a suitable sign replacement ~~may be~~ placed on construction supports in its place.

Shadow vehicles equipped with truck mounted attenuators are required as shown on traffic control plan (TCP) standards (1-series) and (2-series). The truck mounted attenuators ~~shall be~~ one of the following:

Alpha 1000 manufactured by energy absorption, inc., or
Ren-Gard CK 1128 manufactured by renco, inc., or
Syro-45 manufactured by syro, or
MPS 350 III TMA manufactured by Syro.

Traffic Control Plans (TCP) for this project ~~shall be~~ as detailed on standard plan sheets and as provided for in the Texas Manual on Uniform Traffic Control Devices.

Project Number: NH-2002 (79) **Sheet** 14

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

The use of advance warning flashing arrow panels is required for the closing of traffic lanes. The Contractor ~~shall be~~ required to furnish at least two stand-by units, in good working condition at job site, ready for immediate use.

Reflective surfaces on channelizing devices, such as cones, vertical panels, drums and barricades ~~shall be~~ the high specific intensity type, flat surface, reflective sheeting and ~~shall~~ conform with departmental specification, "Flat surface reflective sheeting," D-9-8300, Type C.

All existing drainage conditions are to be maintained during all construction phases.

The Contractor ~~shall~~ provide for safe and convenient access to abutting property, highway, public road, and street crossing except as otherwise provided for or as directed by the Engineer.

The Contractor ~~shall be~~ responsible for furnishing four (4) static message board sign for mainlanes traffic approaching the project. The sign message ~~shall be~~ determined by the Engineer and may be changed as the sequence of work necessitates. The message board will not be paid directly but will be considered subsidiary to item 502.

Properly trained flag persons ~~may be~~ required during certain phases of construction and ~~shall be~~ equipped with the proper reflective clothing and two- way radios, as directed by the Engineer.

The Contractor may be required to use orange pedestrian safety barriers to protect excavated areas as directed by the Engineer. This ~~will not~~ be paid for directly, but ~~will be~~ incidental to other pay items.

The Contractor ~~shall~~ coordinate with adjacent Contractors.

Item 504 Facilities for Field Office and Laboratory

The Contractor ~~shall~~ furnish one air-conditioned field office (TY E) at a location approved by the Engineer. This building ~~shall not be~~ less than 8 feet by 16 feet and 8 feet high or an approved equivalent and ~~shall~~ not have less than four glass windows and one door. A workbench and a table, each 3 feet wide and 6 feet long, ~~shall be~~ provided. The Contractor ~~shall~~ provide a telephone, copy machine, personal computer and printer, and software for the hot-mix program for QA/QC as approved by the Engineer. The field office ~~shall be~~ equipped with indoor plumbing facilities

The Contractor ~~shall~~ furnish 120-140 volt single phase electricity to the field office. The Contractor will pay for the electrical and telephone installations work and the monthly service charges

REVISED 07-29-03

The Contractor ~~will~~ furnish a Type D structure (asphalt mix laboratory) for the Engineer, meeting the requirements of Item 504. The Contractor is responsible for locating this laboratory at the plant site. The laboratory should be available to the Engineer prior to the paving operations. The building and its contents ~~will be~~ subject to the approval of the Engineer. The building ~~will not be~~ less than 12 feet in width, 33 feet in length and 8 feet in height. The building ~~will be~~ partitioned into a minimum of two rooms. All doors will have a minimum width of 3 feet and a minimum height of 6 feet 8 inches. All exterior openings ~~will be~~ secured with burglar bars. Adequate parking ~~will be~~ provided for at least two full size vehicles.

Storage Room:

One room ~~will be~~ used for sample storage and ~~will be~~ 9 feet 12 feet. it ~~will~~ have counters 2 feet in width and 30 inches high placed along the walls. The storage room ~~will~~ have a minimum total counter length of 12 feet. The room ~~will be~~ equipped with 1-wall light switch, 1-ceiling light and 1-20 amp-110 volt outlet.

Laboratory Room:

The other room of this building ~~will be~~ used as a laboratory and will include access to a bathroom facility from the interior. The laboratory and bathroom facility ~~will~~ have the walls, ceiling and floor insulated such that the air temperature can be maintained at 76 degrees Fahrenheit at all times. The Contractor is responsible for maintaining all mechanical, electrical and plumbing facilities at all times .

The laboratory ~~will be~~ equipped with an exhaust fan of sufficient capacity to evacuate the fumes generated by the asphalt solvent. The fan ~~will be~~ capable of reducing the fume concentrations to levels below OSHA maximums and in accordance with the test method TEX-210-F. The fan motor ~~will be~~ explosion proof. The fan ~~will be~~ located beneath the work bench in the extraction area and shall be exhausted to the outside.

The top of the workbench ~~shall~~ not be less than 3 feet by 4 feet and ~~will be~~ constructed of expanded metal reinforced to support required testing equipment. All sides of the workbench ~~shall be~~ enclosed so that all exhaust airflow is through the expanded metal top. The front of the workbench will have a door which, when opened in conjunction with placing a cover over the expanded metal top, will cause the exhaust tobe pulled through the door opening. Sufficient area ~~will be~~ allowed directly in front of this door for the placement and operations of an extractor. A fresh air intake ~~shall be~~ located so that solvent vapors are drawn away controlled space. All safety considerations regarding the laboratory structure which are required for extraction testing in test method TEX-210-F ~~will be~~ provided.

The laboratory ~~will be~~ furnished with work counter measuring 3 feet in width and 3 feet in height along the walls. The laboratory ~~will~~ have a minimum total work counter length of 20 ft. A desk

Project Number: NH-2002 (79) **Sheet** 15

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

measuring 3 feet by 6 feet ~~will be~~ furnished. Three chairs, one filing cabinet, a telephone and one built in equipment storage cabinet ~~will be~~ provided. The equipment storage cabinet ~~shall be~~ a minimum of 3 feet in length by 3 feet in width by 3 feet in height and ~~shall~~ have provisions for locking securely.

The Contractor ~~will~~ provide and pay for the electrical, other utilities, telephone installations and the monthly service charges. the telephone line(s) provided ~~will be~~ separate from other lines.

The laboratory portion ~~will~~ have a minimum of two windows. a laboratory sink measuring 24 inches by 30 inches and 12 inches deep ~~will be~~ provided with adequate clean portable water supply for testing. The laboratory ~~will be~~ equipped with a minimum of ten 20-amp, 110 volt dual outlets and three 30-amp, 220 volt outlets. All electrical work ~~will~~ comply with the national electrical code (NEC). All outlets ~~will be~~ compatible with the electrical requirements of the equipment to be used for testing. Two light switches ~~will be~~ located on the wall and fluorescent ceiling lights capable of meeting ANSI standards for industrial lighting. Space heaters for heating the structure are unacceptable. Portable structures ~~shall be~~ support blocked for stability and ~~shall be~~ tied down.

The Contractor ~~will be~~ responsible for providing the necessary office furniture consisting of desks, chairs, filing cabinets, etc., as directed by the Engineer.

The Contractor ~~will be~~ required to clean the field office and laboratory as needed, but not less than once a week. This ~~will~~ include, but not be limited to, sweeping and mopping floors, cleaning the toilet and lavatory, and emptying waste baskets.

For electrical work on Type D asphalt mix laboratory and construction site field offices which ~~will~~ also include electrical service to said buildings, electrical license requirements ~~will be~~ as outlined in special provision to Item 8 (Prosecution and Progress) Article 8.3 (#1,B).

The Contractor ~~shall~~ furnish 120-240 volt single phase electricity to the field office.

Item 512 Portable Concrete Traffic Barrier

A portion of the concrete traffic barriers (CTB) ~~to be~~ used on this project ~~will be~~ provided by TxDOT. The Contractor is responsible for transporting the CTB from the TxDOT stockpile located on IH-35 at milepost 7. Upon completion of the project, the CTBs ~~shall be~~ returned to the same location. The Contractor ~~shall be~~ responsible for maintaining the CTBs in good working condition throughout construction.

All connecting hardware for concrete traffic barriers ~~to be~~ used on this project ~~shall be~~ provided by the Contractor. The moving, returning to TxDOT, and upkeep of connecting hardware and the CTB ~~will not be~~ paid for directly, but ~~shall be~~ considered incidental to Item 512.

Item 514 Permanent Concrete Traffic Barrier

Joints ~~shall be~~ spaced at a maximum of 30 feet for all single slope concrete barriers.

Item 529 Concrete Curb, Gutter and Combined Curb and Gutter

In the event that an extrusion machine is not used, application of mortar paste to accurately shape the face of the concrete curb or curb and gutter ~~shall~~ normally be placed within 15 minutes and not later than 25 minutes after the concrete is placed in the forms.

Before final acceptance of the project, discoloration caused by tire marks, mud, asphalt, paint or other similar material ~~shall be~~ removed by any method satisfactory to the Engineer to achieve a uniform color and texture of the finished surface exposed to view.

Item 540 Metal Beam Guard Fence

The optional terminal anchor post with the terminal connector ~~will be~~ required as shown on the metal beam guard fence standard. Spacers and all steel fittings ~~shall be~~ galvanized.

Item 610 Roadway Illumination Assemblies

For roadway illumination assembly (U/P)(TY IF)- underpass induction florescent. in lieu of the list of approved manufacturers shown on RID(5) general notes letter "K", the following manufacturers' fixtures have been pre-approved for induction fluorescent underpass lighting. No substitutes will be allowed. Esco, Kennal, and Energy Plus.

ITEM 610

In addition to the requirements for lamps shown on rid(3), high pressure sodium lamps for this project ~~shall~~ meet ANSI C78 requirements and ~~shall be~~ the type that extinguishes at the end of usable lamp life and remains extinguished without cycling. 400 watt lamps ~~shall~~ contain less than 4.0 mg of mercury. 250 watt lamps ~~shall~~ contain less than 3.0 mg of mercury. Lamps ~~shall be~~ lead free. Lamps ~~shall~~ pass the Federal Toxic Characteristic Leachate Procedure (TCLP). Lamp examples: Osram-Sylvania lu400/eco plus.

Project Number: NH-2002 (79) **Sheet** 16

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Special Provision 610-002 (English) allows for the use of pre-approved shop drawings for certain illumination poles. The following shop drawings have been pre-approved at the time of letting.

Valmont English dwg. no. DB00388 sheet 1 of 2, revised 6/24/02
Valmont English dwg. no. DB00388 sheet 2 of 2, revised 6/24/02

Union Metal dwg. no. T1406-b4 sheet 1 of 2, revised 11/08/02
Union Metal dwg. no. T1406-b4 sheet 2 of 2, drawn 1/26/00
Union Metal dwg. no. A2A and A2D, revised 11/08/02
Union Metal dwg. no. T1406-b3 sheet 1 of 2, revised 11/08/02
Union Metal dwg. no. T1406-b3 sheet 2 of 2, revised 1/14/00
Union Metal dwg. no. AA9 and AA2A, revised 11/08/02
Union Metal dwg. no. T1408-b2 sheet 1 of 2, revised 11/08/02
Union Metal dwg. no. T1408-b2 sheet 2 0f 2, drawn 1/11/00
Union Metal dwg. no. AA8 and AA3A, drawing not dated

The Engineer may allow other fabricator's shop drawings and updated (newer revision date) standard shop drawings ~~to be~~ used on this project that have been approved since the project letting date provided that the standard shop drawings can be properly identified by a letter of approval from the Traffic Operations Division.

The contractor ~~shall~~ provide shop drawings for luminaire poles in accordance with this item and item 441.

An Engineer licensed in the State of Texas ~~shall~~ seal the shop drawings.

Item 618 Conduit

Conduit ~~shall be~~ placed in an area not exceeding 2 feet in any direction from a straight line and the depth of the conduit ~~shall be~~ 2 feet except when crossing a roadway where the depth ~~shall not be~~ more than 3 feet or less than one (1) foot below the bottom of the base material in the roadway when placed by the jacking or boring method.

Any evidence of damage to the roadway during the jacking or boring operation ~~shall be~~ sufficient grounds to stop method being used.

All conduits will be replaced as approved by Engineer in the field.

All couplings, extensions, and connections ~~shall be~~ tight and waterproof. All proposed and existing conduit ~~shall be~~ brought into a ground box using 45 degree elbows with bells unless otherwise shown. In the event any conduit shown on these plans or existing proves ~~to be~~

unusable due to location or damage, it ~~will be~~ the responsibility of the Contractor to replace such section of conduit with the size and type indicated on these plans, at the Contractor's expense.

The open trench method for placing conduit under pavement ~~will not be~~ allowed unless prior approval is obtained from the Engineer.

At each point where the conduit passes beneath the curb, the Contractor ~~shall~~ place a one (1) inch galvanized carriage bolt in the curb as a means of marking the location of the conduit. Payment for furnishing and placing bolts to be included in the unit bid price for conduit.

All exposed conduit ~~shall~~ be rigid metal conduit (RMC).

Actual conduit lengths, locations and configurations ~~shall be~~ verified at each intersection and ~~shall be~~ as directed and/or approved by the Engineer.

If casing is required in order to place bored conduit, casing ~~shall be~~ incidental to conduit.

When conduit is to be installed where a riprap surface or an asphaltic concrete surface presently exists, care ~~shall be~~ taken in breaking out the existing surface for placement of the conduit. No area greater than is required for placement of the conduit ~~shall be~~ broken out. The broken out surface ~~shall be~~ replaced with class "A" or class "C" concrete or cold mix asphaltic concrete to the exact slope, pattern and thickness of the existing riprap or asphalt. Payment for breaking out the existing surface, wrapping the foundation and replacing the surface ~~shall be~~ considered incidental to the various bid items and ~~will not be~~ paid for directly.

Pulling conductors in PVC conduit ~~shall be~~ accomplished with nonmetallic pull rope.

When backfilling bore pits, the Contractor ~~shall~~ ensure that the conduit does not become damaged during installation or due to any settling of the backfill material. The Contractor ~~shall~~ compact select backfill in three equal lifts to the bottom of the conduit; or if sand is used, it must be placed to a point 2 inches above the conduit. Backfill density ~~shall be~~ equal to the existing soil. Due care ~~should be~~ exercised to prevent any material from entering the conduit.

A detectable underground metalized mylar conduit marking tape, approved by the Engineer, ~~shall be~~ placed over the conduit over a 6-inch backfill, prior to final backfill of the trench. The marking tape ~~shall be~~ imprinted with "TxDOT Conduit & Traffic System – call (956) 712-7770 before proceeding" every 18 inches. The furnishing and installing of the detectable underground metalized mylar conduit marking tape along the conduit system ~~shall not be~~ paid for directly but ~~shall be~~ subsidiary to the conduit Item.

Conduit attached to bridge ~~shall be~~ paid as trenched conduit. Junction boxes are subsidiary to Item 618 and ~~shall not be~~ paid directly.

Project Number: NH-2002 (79) **Sheet** 16A

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Multiduct conduit ~~shall be~~ placed at 48 inches depth from proposed finish grade, in areas were multiduct cross under culverts and drainage pipes, this multiduct ~~shall be~~ placed at 12 inches below of the bottom of the drainage structure. All multiduct bores crossing IH 35, ramps and frontage road ~~shall~~ require casting steel pipe; this casing ~~shall be~~ incidental to the multiduct.

Item 620 Electrical Conductors

Each wire of each cable or conductor ~~shall be~~ tested after installation by the Contractor. Any incomplete circuit or any damage to any wire or any cable ~~will be~~ cause for immediate rejection of the entire cable being tested. The Contractor ~~shall~~ remove and replace the entire cable at his/her expense, and the replacement cable ~~shall~~ also be tested after installation.

Ends of wires to be attached to terminal posts ~~shall be~~ provided with properly sized self-insulated solder less terminals. These terminals ~~shall be~~ attached to wires with a ratchet type compression crimping tool properly sized to the wire. pre-numbered identification tags of plastic or tape ~~shall be~~ placed around each wire adjacent to wire ends in the controller, signal heads and signal pole terminal blocks.

All insulated power conductors ~~shall be~~ color coded in accordance with the national electrical code. The neutral conductor ~~shall be~~ white. White ~~shall not be~~ used for any other conductor. The grounding conductor ~~shall be~~ bare or green. Green ~~shall not be~~ used for any other conductor.

Colored tape marking ~~shall not be~~ used on conductors size 6 AWG or smaller.

Cable and conductors ~~shall not be~~ placed in the same conduit as VIVD coax cable.

All workers installing electrical materials, including conduit in trenches, services poles and all other system electrical apparatus ~~shall~~ have completed and approved course in electrical underground installations. Contractor shall furnish evidence of satisfactory completion of the course.

Item 624 Ground Boxes

All ground boxes for this project ~~shall be~~ TxDOT approved precast polymerconcrete of the size and type specified.

All ground boxes for this project that relate to the traffic management system ~~shall be~~ precast concrete of the size and type specified.

Ground boxes ~~shall be~~ installed as shown on standard sheet ed (3)-03. The cover ~~shall be~~ legibly imprinted with the words "Traffic Signal" in minimum 2" letters or "Illumination" depending on the type of installation. The ground boxes ~~shall~~ also be legibly imprinted with the words "Danger High Voltage".

Ground box locations shown on the plans are approximate. The ground boxes ~~shall not be~~ placed in driveways or wheelchair ramps. Alternate ground box locations ~~shall be~~ as directed by the Engineer. Ground box aprons ~~shall have~~ a 0.02 foot/foot slope. All ground boxes ~~shall be~~ placed clear of ADA Ramps.

Metal ground box covers ~~shall be~~ grounded by an 8' long ground rod in the ground box and a braided strap. A hole ~~shall be~~ cord drilled for the installation of rod.

The Contractor ~~shall~~ provide all personnel and equipment necessary to remove ground box lids for inspection by the Engineer. The Contractor ~~shall~~ provide this assistance within 24 hours after notification from the Engineer.

The Traffic Management System ground boxes ~~shall be~~ as shown on standard sheets "ITS Ground Box Complete" type 1 or type 2. The covers ~~shall be~~ legible imprinted with the words "C.T.M.S." and "DANGER HIGH VOLTAGE" as shown on standard sheets.

Item 628 Electrical services

The Contractor ~~shall~~ identify the service pole with an address number assigned by the power company. This number shall have 2" numerals visible from the highway. They ~~shall be~~ cut out aluminum figures nailed to wood poles or painted figures on steel poles. Service poles ~~shall be~~ grounded in accordance with the national electric code. The cost of such grounding ~~shall be~~ included in the unit price for this item.

The Contractor ~~shall~~ verify and coordinate service pole locations with the Engineering section of the appropriate utility district.

Any and all cost associated with the installation and connection of service pole to the electrical utility company will be considered incidental to the service pole. This includes conduit, conduit fittings and electrical conductors.

A lightning arrestor shall be mounted in a NEMA 1 enclosure to contain fragments in the event of a lightning strike.

Service poles ~~shall be~~ grounded in accordance with the national electric code. The cost of such grounding ~~shall be~~ included in the unit price for this item.

Project Number: NH-2002 (79) **Sheet** 16 B

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Service pole address numbers and letters ~~shall be~~ furnished and installed by the Contractor. Type and size of letters and numbers ~~shall be~~ approved by the Engineer.

The service enclosures ~~shall~~ be lockable and ~~shall be~~ equipped with Master #2195 padlocks. Each enclosure ~~shall be~~ supplied with two keys. All locks ~~shall be~~ keyed alike.

Each service ~~shall~~ have a meter. The Contractor ~~shall~~ coordinate this with the local electric utility. Type "T" electrical service ~~will be~~ used on this project.

All conduit entries into service enclosures ~~shall~~ have threaded hubs.

Items 634 & 636 Plywood Signs and Aluminum Signs

Complete sign blanks and panels ~~shall be~~ handled and stored at the job site in such a manner that corners, edges and faces are not damaged. Finished sign blanks ~~shall~~ be stored in either a weather proof warehouse or outside and off the ground in a vertical position. All paper, cardboard and chemically treated separators and packaging ~~shall be~~ removed prior to outside storage.

All signs with green blue, red orange, yellow and brown backgrounds ~~shall be~~ fabricated with high specific intensity reflective sheeting (Type C), and all signs with white backgrounds ~~shall be~~ fabricated with high specific intensity reflective sheeting (Type C). Also, all white legends and borders ~~shall be~~ white high specific intensity reflecting (Type C). Reflectorized removable legend ~~will not be~~ allowed.

White legends and borders ~~shall be~~ white Type C (high specific intensity) reflective sheeting. reflectorized removable legend ~~will not be~~ allowed.

Item 644 Small Roadside Sign Assemblies

All signs ~~shall be~~ installed in accordance with the "Texas Manual on Uniform Traffic Control Devices".

Any detail that conflicts with the standard plan sheets ~~shall be~~ brought to the attention of the Engineer prior to construction unless a note is placed adjacent to the detail to indicate an intentional deviation from the standard plan sheets.

The Contractor ~~shall~~ determine the post lengths and verify them prior to ordering the materials in order to meet the field conditions and to conform to the minimum sign mounting heights in accordance with the "Texas Manual on Uniform Traffic Control Devices".

The Contractor ~~shall~~ probe before drilling for foundations to determine the location of all utilities and structures. This work ~~will not be~~ paid for directly but ~~shall be~~ subsidiary to the bid items involved.

All excess excavation ~~shall be~~ spread uniformly inside the right of way as directed by the Engineer and ~~shall be~~ included in the price of these items.

All signs ~~shall be~~ erected according to the locations shown on the signing layout sheets except that the Engineer may shift a sign in order to secure a more desirable location. The Contractor ~~will~~ stake all sign locations as shown in the plans and approved by the Engineer. It is the intent of the plans to erect all roadside traffic signs with the sign edge a minimum of 6 feet from the edge of the shoulder, or if none, 12 feet from the edge of travel lane. In curb and gutter sections the sign edge ~~shall be~~ a minimum of 2 feet from the face of the curb.

The Contractor's attention is called to the fact that the signing standard plan sheets for regulatory and warning signs specify that 0.625 inch plywood be used for sign blank material, as indicated by Item 634. For this project, aluminum type a may be furnished for the signs shown on these plan sheets. Mounting details for the aluminum type A signs ~~shall be~~ the same as shown for plywood signs on SMD standard detail sheets. Unless otherwise specified, aluminum type A signs ~~shall be~~ 0.08 inches thick.

Sign types for which design details are not shown on the plans ~~shall~~ conform to the latest edition of the department's "Standard Highway Sign Designs for Texas" Manual.

Item 647 Large Roadside Sign Supports

New sign foundation stubs, when left overnight without installed signs and posts, ~~shall be~~ protected by the Contractor with flashing electric lights.

Item 649 Removing or Relocating Roadside Sign Assemblies

All removed sign panels, sign posts, and hardware ~~shall~~ become the property of the Contractor and disposed from the State ROW in a manner approved by the Engineer.

Item 656 Foundations for Signs, Traffic Signals and Roadway Illumination Assemblies

Disposal of surplus material required for foundations ~~will be~~ considered incidental to Item 656 "Foundations for Signs, Traffic Signals and Roadway Illumination Assemblies". All surplus excavated material ~~shall be~~ disposed of as directed by the Contractor.

Project Number: NH-2002 (79) **Sheet** 16 C

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

For this project the Contractor ~~shall~~ use a Texas Penetrometer reading of fifteen (15).

All stub-outs in foundation and concrete structures ~~shall~~ be rigid metal conduit (RMC) and shall be considered incidental.

Item 658 Delineator and Object Marker Assemblies

Delineator assemblies ~~shall be~~ installed 8 feet from the edge of the shoulder unless restricted by some obstruction, in which case, the delineator assembly ~~shall be~~ placed between 2 feet and 8 feet from the edge of the shoulder.

Bi-directional installation of object markers ~~shall be~~ by any method satisfactory to the Engineer.

Items 662 and 666 Work Zone Pavement Markings and Reflectorized Pavement Markings

All permanent pavement markings for this project under this item ~~shall be~~ 90 mil thick thermoplastic. Type II markings ~~shall be~~ used as a primer.

Item 677 Eliminating Existing Pavement Markings and Markers

Asphalt and aggregate types and grades ~~shall be~~ as approved in writing by the Engineer when a surface treatment is used to eliminate existing pavement markings.

Item 680 Installation of Highway Traffic Signals

The Contractor ~~shall~~ furnish all labor, tools, equipment, and materials, called for in the project plans and specifications and as are necessary for a complete and operating installation.

All traffic signal construction work, including correcting all discrepancies shown on the TxDOT inspector's 'traffic signal installation inspection report" ~~shall be~~ completed prior to beginning of the required test period.

The Contractor ~~shall~~ provide a full-time qualified traffic signal technician to be responsible for the installation, maintenance and/or replacement of all traffic signal devices.

The Contractor ~~will be~~ responsible for adjustments in project construction which may be needed because of conflicts with underground utilities.

Luminaries arms mounted on traffic signal poles ~~shall not be~~ aimed into the intersection, but ~~shall be~~ aimed so that each arm is perpendicular to the centerline of the roadway which it covers in order to develop the proper illumination pattern for the intersection.

The Contractor ~~shall~~ permit the electrical work ~~to be~~ inspected by the state and city for compliance with the plans and specifications.

Conductors ~~shall be~~ continuous without splices from signal controller to signal pole terminal blocks. Conductors for luminaries ~~shall be~~ routed to the service enclosure.

All electrical work done ~~shall be~~ in conformance with the current edition of the national electrical code (NEC) and TxDOT standard sheets.

Any abrasion to any conductor insulation while pulling cable for the traffic signal system ~~will be~~ cause for immediate rejection. The Contractor ~~shall~~ remove and replace the entire cable at his/her expense.

The controller housing ~~shall be~~ bonded with No. 6 AWG copper wire or equal to form a continuous system and effectively grounded to five-eighths (5/8) inch by ten (10) foot copper clad ground rod as indicated in the plans. The signal common, service common, conduit, and metal signal supports ~~shall be~~ bonded with No. 6 AWG copper wire or equal to form a continuous system and effectively grounded to five-eighths (5/8) inch by eight (8) foot copper clad ground rods as indicated in the plans.

All signal heads ~~shall be~~ wrapped with dark plastic or suitable material so that signal faces cannot be seen from the time of installation until placed in operation.

All signal heads furnished by the Contractor ~~shall be~~ of the same manufacturer.

Reflective sheeting for all signs mounted under or adjacent to signal heads ~~shall be~~ high specific intensity.

The Contractor ~~shall~~ furnish and attach compression type connectors and the connectors ~~shall be~~ installed with a compression mechanical release hand crimping tool to each individual conductor before making connections to all terminal strips.

The Contractor ~~shall~~ furnish solid conductors.

Ready mix concrete may be used for this project.

The Contractor may use membrane curing on concrete work as specified by Item 526 "Membrane Curing"

Standard 4.5" galvanized pipe type poles (except breakaway type) used on this project are subject only to the inspection of the Engineer for their acceptance. No mill test reports or documentation will be required.

Project Number: NH-2002 (79) **Sheet** 16 D

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Contractor ~~shall be~~ responsible for maintenance of the traffic signals until project is accepted. Contractor ~~shall~~ use Type C (ASTRO bracket) only.

Item 682 Vehicle and Pedestrian Signal Heads

All traffic signal lamps for this project ~~shall~~ meet the requirements of Item 682 "Vehicle and Pedestrian Signal Heads".

Two (2) set screws ~~shall be~~ installed on all vehicle signal head mounting hardware fittings.

All mounting hardware ~~shall be~~ in accordance with the requirements for the Item 682 "Vehicle and Pedestrian Signal Heads".

Item 686 Traffic Signal Pole Assemblies (steel)

The Contractor ~~shall~~ use a welded steel template to hold the anchor bolt and conduits rigidly in place for a mast arm pole or steel strain pole assembly.

The Contractor ~~shall~~ leave a minimum of one full diameter thread exposed on each anchor bolt securing a signal pole.

Anchor bolts for steel strain poles ~~shall be~~ set so that two are in compression and two are in tension.

After the traffic signal pole assembly has been plumbed and all nuts are tight, each anchor bolt nut ~~shall be~~ tack welded in two (2) places to its washer and each washer ~~shall be~~ tack welded to the base plate in two (2) places. No welding is to be made to the bolt. Galvanizing in tack weld areas ~~shall be~~ repaired using zinc-rich paint in accordance with Item 445, "Galvanizing". The exposed upper threads of the anchor bolts ~~shall be~~ cleaned of pipe joint compound and coated with zinc-rich paint to seal the bolt thread-nut joint.

Item 1436– CCTV Field Equipment

The Contractor ~~shall~~ verify the equipment compatibility with TxDOT Laredo. The Contractor shall provide a pan-tilt-zoom (ptz) keyboard compatible with the video switcher. Payment for this equipment ~~shall be~~ subsidiary to this bid item.

Inner duct – the inner duct (1 inch) is incidental to the fiber optic cable.

Items 1437 Communications Hub Building

Overall floor dimensions of the communications hub building ~~shall be~~ 6' by 8'.

The load size of all circuit breakers ~~shall be~~ protected by an Edco model shp-300-10s, hesco hes 300-10, or equivalent three terminal lightning arrestor.

The distribution panel ~~shall be~~ square D QO series, GE THQ series, or equivalent.

Item 1438 - Fiber Optic Cable

All materials and services not expressly called for in the specifications or not shown in the plans, which may be necessary for the complete and proper construction, ~~shall be~~ performed, furnished, and installed by the contractor with no additional payment.

Prior to starting any work involving the existing fiber optic cable, the contractor ~~shall~~ completely identify the fiber strands currently in use and ~~shall~~ take all precautions necessary to prevent damage or interruptions to the fiber strands. The contractor ~~shall~~ furnish all equipment, material and labor necessary for identification and protection of the utilized fibers.

All material and services necessary for connection of new equipment to fiber optic cable ~~shall be~~ furnished by the contractor with no additional payment.

The contractor ~~shall~~ document all changes in the fiber optic cable utilization and ~~shall~~ provide detailed fiber optic cable utilization diagrams to the engineer upon completion of all changes.

The single mode fiber optic cable ~~to be~~ installed on this project ~~shall be~~ tested at a wavelength of 1300 nanometers and 1550 nanometers.

The post termination test ~~shall be~~ preformed as the fiber optic cable is being terminated or fusion spliced. The post termination test checks for attenuation and problems at the fusion or termination point and then overall fiber cable segment. It also determines whether the attenuation and quality of the termination meets the fiber optic specification. If the termination does not meet the specification, then the termination ~~shall be~~ repeated until it meets the specification. Once the terminating is acceptable, the fiber segment ~~shall be~~ tested for attenuation and anomalies. Once the fiber segment is acceptable, the test results are documented and forwarded to the engineer.

When testing the fusion splices on pigtails, the contractor ~~shall~~ use a launch reel of the same type of fiber as the cable pigtail being spliced. This is necessary to extend out the trace so that the fusion splice can be seen and documented properly.

Item 1442 – Retract and Reroute Existing Fiber Optic Cables

Project Number: NH-2002 (79) **Sheet** 16E

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

Retract and reroute of all other cables other than fiber optic cable, including but not limited to communication, traffic signal, and power, ~~shall be~~ subsidiary to this item and no other payment ~~shall be~~ made.

Removal of existing conduits and ground boxes, as shown in the plans, ~~shall be~~ subsidiary to this item and no other payment ~~shall be~~ made.

Item 1445 – Asynchronous Subrate Data Channel Unit

This contractor ~~shall~~ furnish, install, and test the Drop/Insert Multiplexor/Demultiplexor PSDM Cards into the existing D/I Muldems presently located at the environmental controlled hub building and the Traffic Management Center. The contractor ~~shall~~ reference Item 1445 Asynchronous Subrate Data Channel Unit "for any additional information .

Item 1447 – FTM Lane Control Signal Field Equipment

Tall brackets and Unistrut material that must be installed on the proposed signage for mounting any LCS head will be paid incidental to this bid item.

TxDOT ~~shall~~ furnish paint specifications to the Contractor as needed to comply with requirements under this item.

Item 1448 – Fiber Optic DMS Signs

Flashing beacons ~~shall be~~ required on all signs.

The Fiber Optic Dynamic Message Signs ~~shall~~ enable the display of text, consisting of a string of alphanumeric characters. The size of the sign ~~shall be~~ as shown on the plans. Each character ~~shall be~~ formed by a matrix of luminous dots. The matrix ~~shall~~ consist of 35 dots over 5 columns and 7 rows. A luminous dot ~~shall~~ consist of the ends of two fiber optic bundles for 12-inch or 18-inch characters and one fiber optic bundle for 8-inch characters. The fiber ends ~~shall be~~ fitted with a convergence cone or lens. An electro-magnetically controlled shutter mechanism ~~shall~~ open and close the opening in front of the fiber optic bundles. All DMS cabinets ~~shall~~ require telephone line drops with dial up modems.

Item 1451 and Item 1454 Data Fiber Optic Transceiver

The fiber optic bypass switches used on this project ~~shall not be~~ integral to the data fiber optic transceiver, Each communication hub ~~shall~~ have all fiber optic bypass switches mounted in one electronic enclosure. The fiber optic bypass switches ~~shall be~~ interconnected to the data fiber optic transceivers utilizing fiber optic jumpers.

Item 1452– Limited Distance Modem (LDM)

The Contractor furnished modems ~~shall be~~ compatible with the existing modems provided for Milo I and Milo II projects.

All proposed limited distance modems ~~shall be~~ provided with an rs-232 cable assembly.

Item 1453– Loop Detector for Surveillance, Communication and Control (SC&C)

All saw cut loop detectors ~~shall be~~ installed on stone filled hot asphalt concrete pavement layer at a minimum depth of 2". The contractor ~~shall be~~ given the option of installing prefabricated loops at above mentioned layer as shown on detail sheet "ITS LOOPS ISNTALLATION DETAILS".

Item 3146, 3241, 3248, 3249, 3231

This project ~~shall be~~ equipped with a self-propelled wheel mounted hot mix transfer vehicle capable of receiving mix from the haul trucks separate from the paver. It ~~shall~~ have minimum approximate storage capacity of 25 tons. It ~~shall be~~ equipped with a pivoting discharge conveyor and a means of completely remixing the ACP prior to placing. The paver hopper ~~shall be~~ equipped with a separate surge storage insert with minimum approximate capacity of 20 tons.

The bottom 2" superpave mix ~~shall be~~ designed at 98% lab molded density at 50 gyrations.

The pg binder for this project:
Hot Mix (TY A): pg 70-22 sbs
Hot Mix (TY C): pg 76-22 sbs
Superpave hot mix ACP (1/2"): pg 64-22
Stone filled Hot Mix ACP (1"): leave pg 70-22 (sbs)
Stone filled Hot Mix ACP (3/4"): pg 76-22 sbs
Heavy duty stone matrix ACP (3/4"): pg 76-22 sbs
Pourus friction course ACP (1/2"): pg 76-22 sbs Eliminated thru C.O.

R.A.P. ~~will not be~~ allowed in the surface mat of ACP.

The longitudinal joints in the top lift ~~shall be~~ at the lane lines.

The asphalt plant ~~shall be~~ equipped with truck scales as defined in Item 520.3 (1) of the standard specifications. Three weight tickets bearing the date, the truck number and the gross, net and tare weights ~~shall be~~ given to the truck driver by the Contractor's or asphalt plant personnel, and then given to the state inspector at the spreading and finishing machine. The Contractor ~~may be~~

Project Number: NH-2002 (79) **Sheet** 16F

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

required to weigh loads of asphaltic concrete on public scales or portable platform scales to insure the proper weight of material.

The density and aggregate classification requirements for the mainlanes ~~shall~~ also apply to the shoulders.

The minimum surface aggregate classification required ~~shall be~~ class "A" for the following: SS 3231, SS 3248, SS 3146

Limestone screenings ~~shall be~~ used.

The Contractor ~~will be~~ required to submit a copy of the TEX 233-F production charts to the Engineer on a weekly basis. At the end of the ACP work, all production chart originals ~~shall be~~ provided by the Contractor or the Contractor's ACP producer to the Engineer.

Crushing of the aggregate for hot mix and immediate use for production of the mix ~~will not be~~ allowed. The aggregate ~~shall be~~ stockpiled until enough material is available for five days of hot mix production unless prior written approval is provided by the Engineer.

In order to provide adequate time for design and verification of the mix, a pre-placement meeting ~~shall be~~ held at least one month prior to the placement of the hot mix.

The main purpose of hot mix cores taken by the state are for payment calculations. If (for quality control purposes) the Contractor wants the core information sooner than the state can provide these results, the Contractor should take additional core for their use.

The use of diesel and/or solvents as asphalt release agents in the production, transportation, and/or construction of the hot mix asphaltic concrete is prohibited. Only approved asphalt release agents ~~shall be~~ used, the approved list may be obtained from the district laboratory Engineer.

In addition to the tack coat materials specified in the standard specification, the Contractor, if desired, may use MS-2. The Contractor ~~shall~~ exercise diligence in the application of "tack coat" by the use of flagging and rolling procedures to keep from spraying or spattering the traveling public with asphaltic material.

Blading ~~may also be~~ necessary to clean dirt and grass from pavement edges and turnouts areas as work under this bid item. The cost of this blading ~~will not be~~ paid for directly, but ~~shall be~~ considered subsidiary to this bid item.

Item 3231 Porous Friction Course Eliminated Thru C.O.

REVISED 07-29-03

16F

Course aggregate ~~shall~~ have a minimum surface aggregate classification of "A" as specified in the aggregate quality monitoring program.

Item 3249 Stone Filled HMAC (pg 76- 22) (3/4")

Before commencing any paving operation the Contractor ~~shall~~ cut back all soil and vegetation from edges of the pavement and spread it in the backfill area along the edge of the pavement. This material ~~shall be~~ incorporated into the material used for backfilling the edges upon completion of the overlay. This work ~~shall be~~ considered subsidiary to the various bid items.

The course aggregate used on this project shall have a minimum surface aggregate classification of "A" as published in the aggregate quality program rated source quality catalog.

Master gradation limits for material passing the No. 200 sieve ~~shall be~~ 2.0-10.0 percent when determined using either chlorinated solvents or the ignition oven.

The addition of an antistrip additive ~~shall be~~ required. The addition of the antistrip additive ~~shall be~~ in accordance with Item 301. All required moisture damage testing of Item 301 and test method TEX-242-F (Hamburg Wheel-Tracking Test) ~~shall be~~ in effect.

For this item maximum lift thickness ~~shall be~~ 3.5 inches. Multiple lifts may be required to achieve the proposed depth.

Item 5001 Temporary Metal Beam Guard Fence

Type C reflectors ~~shall be~~ required on all temporary metal beam guard fence.

Item 5004 Temporary Erosion, Sediment and Water Pollution Prevention and Control

For this project, a "Storm Water Pollution Prevention Plan" (SW3P) is required. Since the disturbed area is two acres or more on this project, a "Notice of Intent" (NOI) is also required.

The SW3P for this project ~~shall~~ consist of using the following items as directed by the Engineer:
Temporary sediment control fence,
Rock filter dams for erosion and sedimentation control
Construction exits
Earthwork for Erosion Control

Item 5865 Computer Equipment

Project Number: NH-2002 (79) Sheet 16G

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

The Contractor ~~will be~~ required to provide a laptop computer with the following minimum specifications listed on SS 5865.

The Contractor ~~will be~~ responsible for any repairs the laptop computer may require for the duration of the project.

The Contractor will be responsible for supplying an equivalent spare laptop within three (3) working days at the Contractor's expense in the event the original laptop computer should malfunction and need repairs.

The laptop computer will be returned to the Contractor at the end of the project.

Item 5880 Ride Quality for Pavement Surfaces

For this project Table 1 for pay adjustment table shall be utilized for this project. The areas of localized roughness (bumps) will be assessed.

Surface test type B (profilograph) shall be used. An automated profilograph is required.

Item 6031 Communication cable

The Contractor ~~shall~~ jelly fill each end of the communication cable that is exposed to elements during storage or after installation to prevent water intrusion.

The Contractor ~~shall be~~ responsible for the signal carrying capability and performance of the cable. Each wire ~~shall be~~ installed with a lightning protection device unless otherwise noted.

The 6 pair and 25 pair communications cable shown in the plans ~~to be~~ installed with the fiber optic cable ~~shall be~~ terminated at each communications hub building/cabinet. The Contractor ~~shall~~ install a 1/4 inch phone jack in each communications hub building/cabinet. These phone jacks ~~shall be~~ connected to the six pair communications cable in such a manner as to provide a continuous "party line" voice communications circuit throughout each communications hub building/cabinet on the project. This work ~~will not be~~ paid for directly but shall be considered incidental to the various bid items.

Item 8964 Traffic Signal Controller Assembly (TS-2)

In place of shelf mount detector harnesses, the Contractor ~~shall~~ supply a detector card rack wired to the detector panel as specified in special specification Item 6519.

REVISED 07-29-03

16G

Project Number: NH-2002 (79) **Sheet** 16H

County: WEBB **Control:** 0018-05-062

Highway: IH35: From Loop 20 to Uniroyal Road

16H

The following is a list of sources for relays and circuit breakers in the TxDOT controller specification, Item 8964:

ITEM	MANUFACTURER	PART NUMBER
FLASH TRANSFER RELAYS:	AEMCO MIDTEX MAGNECRAFT	136-4931 136-62T3A1 W21ACPX-2 OR 21ACPXD-5
INTERCONNECT RELAYS (AC AND DC):	MIDTEX POTTER & BRUMFIELD MAGNECRAFT	258 SERIES K10 SERIES W78 SERIES
CIRCUIT BREAKERS:	SQUARE D GE WESTINGHOUSE	QOU150 THQC 115OL QC1050

Item 8970 Video Imaging Vehicle Detection System

The VIVDS cameras, processor units and software ~~shall be~~ compatible with the existing VIVDS autoscope system at the traffic operations center.

SUGGESTED CONSTRUCTION SEQUENCE

STEP 1

REMOVE TOP OF EXISTING TOP SOIL. CONSTRUCT EMBANKMENT TO FINAL GRADING.

STEP 2

EXCAVATE TRENCH 2'-0" WIDE TO TOP OF EXISTING LIME TREATED. MILL 2¾" OF EXIST PAVEMENT (2" OF ACP AND ¾" OF ASB) SUBGRADE AS SHOWN.

STEP 3

PLACE FLOWABLE BACKFILL TO MATCH FLUSH TOP OF MILLED SURFACE. APPLY ONE COURSE SURF TREAT (SEAL COAT) ON TOP OF ASB AND FLOWABLE BACKFILL. THEN PLACE 2¾" OF SMA.

STEP 4

PRIME 1½" PFC AND FINISH DRESSING UP SIDE SLOPE AS SHOWN.

HOUFILE023 \ncf\01301\ $DATE$

GENERAL

1.) THIS SUGGESTED TRAFFIC CONTROL PLAN IS SUBMITTED FOR THE CONTRACTOR'S CONSIDERATION. THE CONTRACTOR MAY SUBMIT AN ALTERNATE CONSTRUCTION SEQUENCE AND TRAFFIC CONTROL PLAN TO THE ENGINEER FOR CONSIDERATION. ALTERNATE PLANS MUST BE SIGNED AND SEALED BY A REGISTERED PROFESSIONAL ENGINEER IN TEXAS.

2.) THE SUGGESTED TRAFFIC CONTROL PLAN HAS BEEN DIVIDED INTO SIX (6) PHASES OF CONSTRUCTION. THE VARIOUS PHASE SEQUENCES SHALL REQUIRE DETOURS, LANE DETOUR TRANSITIONS, AND LANE CLOSURE TRANSITIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVING ALL CONFLICTING PAVEMENT MARKINGS AND COVERING CONFLICTING SIGNING, AS WELL AS INSTALLING THE REQUIRED TEMPORARY CONCRETE TRAFFIC BARRIERS AND/OR CHANNELING DEVICES WITH APPROPRIATE CONSTRUCTION PAVEMENT MARKINGS AND CONSTRUCTION WARNING SIGNS AS SHOWN ON THE TRAFFIC CONTROL PLAN SHEETS, THE BARRICADES AND CONSTRUCTION STANDARD SHEETS, THE TMUTCD, OR AS DIRECTED BY THE ENGINEER, SINCE THE TRAFFIC CONTROL PLAN IS COMPLEX DUE TO THE VARIOUS PHASES AND SEQUENCES OF WORK INVOLVED, THE CONTRACTOR SHALL BE REQUIRED TO ASSIGN A KNOWLEDGEABLE AND RESPONSIBLE TRAFFIC CONTROL PERSON TO PROVIDE COORDINATION IN THIS REGARD WITH HIS WORK FORCES, SUB-CONTRACTORS, AND WITH THE DEPARTMENT. MOVING FROM ONE PHASE OR SEQUENCE TO ANOTHER SHALL REQUIRE ADVANCE COMPREHENSIVE PLANNING AND COORDINATION WITH THE ENGINEER SO AS TO MAXIMIZE SAFETY AND MINIMIZE INCONVENIENCE FOR THE TRAVELING PUBLIC.

3.) THE IH 35 MAINLANES ARE TO BE SIGNED FOR A WORK ZONE SPEED OF 60 MPH AND FRONTAGE ROADS FOR 40 MPH AS NOTED ON THE PLANS, ADVISORY SPEED SIGNS IN SUFFICIENT NUMBER AS DETERMINED BY THE ENGINEER SHALL BE FURNISHED IN ALL OTHER AREAS OF THE PROJECT.

4.) UPON COMPLETION OF THE PROJECT THE CONTRACTOR SHALL RESTORE ALL DISTURBED AREAS AND ELEMENTS NOT SET UP FOR RECONSTRUCTION TO THEIR ORIGINAL CONDITION, AND ALL TEMPORARY TRAFFIC CONTROL DEVICES SHALL BE REMOVED FROM THE PROJECT.

5.) LEVEL UP OPERATIONS IN DETOUR AREAS, AS NOTED, SHALL OCCUR PRIOR TO SWITCHING TRAFFIC TO THE SECTION COMPLETED IN THE PREVIOUS STEP. WORK ZONE TRAFFIC HANDLING SHALL BE IN ACCORDANCE WITH THE TxMUTCD, TCP (3-2)-98 AND AS DIRECTED BY THE ENGINEER. EDGE DROP OFFS SHALL REQUIRE THE USE OF CW8-11 SIGNS PLACED AS DIRECTED BY THE ENGINEER.

6.) ALL CONSTRUCTION TRAFFIC SHALL BE REGULATED SO AS TO CAUSE A MINIMUM OF INCONVENIENCE TO THE TRAVELING PUBLIC. AT THE TIMES WHEN IT IS NECESSARY FOR TRUCKS TO STOP, UNLOAD OR CROSS ROADWAYS UNDER TRAFFIC, WARNING SIGNS AND FLAGGERS SHALL BE PROVIDED AS NECESSARY TO ADEQUATELY PROTECT PUBLIC TRAVEL.

7.) UPON COMPLETION OF THE PROJECT, THE PROJECT AREAS SHALL BE THOROUGHLY CLEANED OF ALL CONSTRUCTION MATERIALS, AND ALL STOCKPILE LOCATIONS ADEQUATELY CLEAND TO A FINAL ACCEPTANCE BEFORE BARRICADES MAY BE REMOVED FROM THE PROJECT.

SAFETY

1.) ONE HIGH-INTENSITY, YELLOW ROTATING DOME LIGHT SHALL BE REQUIRED ON ALL EQUIPMENT SUCH AS DISTRIBUTORS, SPREADER BOXES, LAY-DOWN MACHINES, ROLLERS, BACK HOES, ROAD GRADERS, LOADERS, ETC. THE LIGHT SHALL BE MOUNTED HIGH ENOUGH TO BE VISIBLE FROM ALL DIRECTIONS AND SHALL BE USED WHEN THE EQUIPMENT IS WITHIN 30 FEET OF THE TRAVELWAY. ALL OTHER EQUIPMENT SUCH AS TRUCKS, TRAILERS, AUTOS, ETC., SHALL BE EQUIPPED WITH EMERGENCY FLASHERS AND THE FLASHERS SHALL BE USED WHILE WITHIN THE WORK ZONE.

2.) THE CONTRACTOR SHALL PROVIDE OFF-DUTY UNIFORMED LAW ENFORCEMENT OFFICERS, WITH JURISDICTION ON THE PROJECT (NUMBER TO BE DETERMINED BY THE ENGINEER) FOR TRAFFIC CONTROL OPERATIONS. THIS DOES NOT RELIEVE THE CONTRACTOR OF THE RESPONSIBILITY OF TAKING OTHER STEPS AND PROVIDING OTHER PERSONNEL WHICH THE CONTRACTOR MAY DEEM NECESSARY FOR THE PROTECTION OF THE WORKERS AND THE TRAVELING PUBLIC.

3.) PEDESTRIAN SAFETY, PLASTIC CONSTRUCTION FENCING, A MINIMUM OF 4 FEET HIGH, SHALL BE USED AROUND OPEN EXCAVATIONS.

4.) FLAGGERS SHALL USE TWO-WAY RADIOS OR OTHER ENGINEER APPROVED METHODS OF COMMUNICATION TO CONTROL TRAFFIC.

TRAFFIC CONTROL DEVICES

1.) ALL WORK ZONE PAVEMENT MARKINGS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE IN ACCORDANCE WITH STANDARD SHEETS WZ (STPM)-03 AND BC (7) AND BC(8)-03 AND THE TMUTCD.

2.) THE CONTRACTOR SHALL MAINTAIN EXISTING AND WORK ZONE PAVEMENT MARKINGS IN GOOD VISIBLE CONDITION THROUGHOUT THE LENGTH OF THE PROJECT. REMOVAL OF EXISTING PAVEMENT MARKINGS SHALL BE ACCOMPLISHED BY "METHODS AS APPROVED BY THE ENGINEER" AND WILL BE PAID FOR UNDER ITEM 677 ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS.

3.) EXISTING STOP SIGNS SHALL REMAIN IN PLACE AND IN USE THROUGHOUT CONSTRUCTION, UNTIL SPECIFICALLY IDENTIFIED TO BE REMOVED. ALL SIGNS, BARRICADES, WORK ZONE MARKINGS AND DEVICES AS SHOWN SHALL BE IN ACCORDANCE WITH BOTH THE 2003 "TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" (TMUTCD), INCLUDING INTERIM REVISIONS THERETO, AND TXDOT-LAREDO DISTRICT STANDARDS AND SPECIFICATIONS.

4.) ALL WORK ZONE GUIDEMARKS, SHORT TERM MARKINGS AND STANDARD PAVEMENT MARKINGS REQUIRED FOR THIS PROJECT WILL BE PAID FOR UNDER ITEM 662 "WORK ZONE PAVEMENT MARKINGS."

5.) ADEQUATE SIGNS AND BARRICADES SHALL BE INSTALLED BY THE CONTRACTOR AND APPROVED BY THE ENGINEER PRIOR TO OPENING ANY SECTION TO TRAFFIC. THE ENGINEER MAY DIRECT THE CONTRACTOR TO FURNISH ADDITIONAL SIGNS, BARRICADES, AND CHANNELIZING DEVICES REQUIRED TO MAINTAIN TRAFFIC AND MOTORIST SAFETY DURING CONSTRUCTION. ANY SUCH ADDITIONAL SIGNS, BARRICADES, ETC., SHALL BE CONSIDERED AS PART OF PAY ITEM 502 "BARRICADES, SIGNS, AND TRAFFIC HANDLING."

6.) TYPE III PROJECT LIMIT BARRICADES WITH TYPE A WARNING LIGHTS, ACCOMPANYING SIGNS, AND SPECIAL INFORMATION SIGNS SHALL BE REQUIRED AT EACH END OF THE PROJECT. THESE SHALL REMAIN IN PLACE UNTIL FINAL PROJECT ACCEPTANCE. BARRICADES, SIGNS, CHANNELIZING DEVICES AND TRAFFIC CONTROL DEVICES AS SHOWN SHALL BE ADJUSTED OR SHIFTED AS NECESSARY AND APPROVED BY THE ENGINEER TO FIT FIELD CONDITIONS.

7.) THE CONTRACTOR SHALL INSURE THAT BARRICADES, SIGNS, CHANNELIZING DEVICES, WARNING LIGHTS, AND TRAFFIC CONTROL DEVICES ARE MAINTAINED IN A CLEAN, SAFE VISIBLE, AND FUNCTIONAL CONDITION AT ALL TIMES. THIS INCLUDES NECESSARY REPAIR AND/OR MAINTENANCE DUE TO ACTS OF VANDALISM OR ACCIDENT. THE CONTRACTOR SHALL HAVE ENOUGH SIGNS, BARRICADES, AND TRAFFIC CONTROL DEVICES AVAILABLE, AT ALL TIMES, TO REPLACE THOSE DAMAGED.

8.) DETOUR SIGNING AND PAVEMENT MARKINGS SHALL BE AS SHOWN IN THE PLANS AND AS REQUIRED IN THE TMUTCD.

9.) WHERE 4 FEET MINIMUM BUFFER ZONE CAN BE OBTAINED, PLASTIC DRUMS SHALL BE USED FOR CHANNELIZING DEVICES. OTHERWISE, VERTICAL PANELS ARE TO BE USED. SPACING OF THE CHANNELIZING DEVICES SHALL BE AS FOLLOWS UNLESS OTHERWISE SHOWN ON THE PLANS:

	CHAN. DEV SPAC.		
	SPEED	TAPER	TANGENT
FRONTAGE ROADS	40 MPH	40 FT C-C	80-100 FT C-C
MAIN LANES	60 MPH	60 FT C-C	120-150 FT C-C

TAPER LENGTHS SHALL BE THE MINIMUM AS DEFINED IN THE TxMUTCD, OR LONGER AS DIRECTED BY THE ENGINEER.

NOTE THAT THE NUMBER OF BARRELS & BARRICADES SHOWN ON THE PLAN SHEETS ARE NOT EXACT. ACTUAL NUMBER MAY VARY AND SHALL BE BASED ON PROPER SPACING FOR THE CONDITION, AS SHOWN IN THE TxMUTCD, OR AS DIRECTED BY THE ENGINEER.

10.) WORK ZONE PAVEMENT MARKINGS ON BRIDGES, OR THOSE WHICH WILL BE INSTALLED AFTER THE COMPLETION OF WORK ON A CERTAIN PHASE SEQUENCE BUT WILL BE REQUIRED TO BE REMOVED ON A SUBSEQUENT SEQUENCE OF WORK, SHALL BE THE REMOVABLE TYPE. ALL NON-REMOVABLE WORK ZONE PAVEMENT MARKINGS SHALL BE THERMOPLASTIC.

REF FILE(S): J011op01.bdr. bdr LV ON = 45.57.60-63

B50GNP1.dgn-01 HOUFILE023 \hcivil\cf0130\ 4/18/2003

11.) THE CONTRACTOR SHALL UTILIZE TRAFFIC CONTROL DEVICES AS SHOWN IN THESE DRAWINGS ON A PER PHASE BASIS; THEREFORE, ANY DEVICES UTILIZED IN A PREVIOUS PHASE THAT CONFLICTS WITH THE TRAFFIC CONTROL FOR THE CURRENT PHASE SHALL BE REMOVED.

12.) THE CONTRACTOR SHALL COVER EXISTING ADVANCE SUPPLEMENTAL GUIDE SIGNS AND ENTRANCE/EXIT GORE SIGNS CORRESPONDING TO THE ENTRANCE/EXIT RAMP CLOSURES FOR THAT PARTICULAR SEQUENCE OF PHASE CONSTRUCTION. COVERING OF THESE SIGNS SHALL BE DONE WITH A MATERIAL APPROVED BY THE ENGINEER, WITH THE MATERIAL ATTACHED TO THE SIGN IN A MANNER WHICH WILL PRESENT A NEAT APPEARANCE AND NOT DAMAGE THE SIGN. THE CONTRACTOR SHALL MAINTAIN THESE SIGN COVERINGS FOR THE DURATION OF THE SEQUENCE OF THE CONSTRUCTION. WHEN THE EXIT OR ENTRANCE RAMP IS RE-OPENED TO TRAFFIC, ALL EXISTING PERMANENT SIGNS SHALL BE UNCOVERED AND ALL APPLICABLE TEMPORARY GUIDE SIGNS SHALL BE REMOVED.

13.) TEMPORARY GUIDE SIGNS SHALL BE INSTALLED ON TIMBER BREAKAWAY ROADSIDE SIGN SUPPORTS AS SHOWN ON BARRICADE STANDARD BC (4)-03. ALL WORK AND MATERIALS REQUIRED FOR THE INSTALLATION AND REMOVAL OF THE TEMPORARY GUIDE SIGNS AND FOR THE COVERING EXISTING SIGNS REQUIRED FOR THE VARIOUS STAGES OF PHASE CONSTRUCTION WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 502. ALL TEMPORARY GUIDE SIGNS INSTALLED SHALL REMAIN THE PROPERTY OF THE CONTRACTOR. SEE "TEMPORARY GUIDE SIGNS FOR ENTRANCE/EXIT RAMP CLOSURES" FOR A TYPICAL APPLICATION.

14.) FOR THIS PROJECT THE CONTRACTOR SHALL PROVIDE, INSTALL AND MAINTAIN PORTABLE CHANGEABLE MESSAGE SIGNS (PCMS) AS DESIGNATED IN THE PLANS, AND IN ACCORDANCE WITH SPECIFICATION ITEM 6670, "PORTABLE CHANGEABLE MESSAGE SIGN" (PCMS). THE PCMS SHALL BE PLACED FAR ENOUGH IN ADVANCE OF THE WORK SITE TO ALLOW TRAFFIC AMPLE OPPORTUNITY TO READ & REACT TO THE MESSAGE. PCMS SHALL BE IN PLACE SEVEN (7) DAYS IN ADVANCE OF ALL TRAFFIC PHASE/STEP CHANGES AS NOTED IN TABLE 1. IN ADDITION TO THE ABOVE PCMS, PCMS SHALL BE PLACED 2 WEEKS PRIOR TO COMPLETE FRONTAGE ROAD CLOSURES AND REMAIN IN PLACE UNTIL 2 WEEKS AFTER THE CLOSURE IS MADE, AS NOTED IN TABLE 2. AFTER REMOVAL A STATIC MESSAGE BOARD SHALL REPLACE THE PCMS.

TABLE 1. PCMS FOR PHASE/STEP CHANGES

PHASE/STEP	# OF SIGNS	DAYS/ SIGN	DAYS	PHASE/STEP	# OF SIGNS	DAYS/ SIGN	DAYS
PHASE I	0		0	PHASE IV STEP 2A	2	7	14
PHASE II STEP 1A	2	7	14	PHASE IV STEP 2B	2	7	14
PHASE II STEP 1B	2	7	14	PHASE IV STEP 2C	2	7	14
PHASE II STEP 2A	2	7	14	PHASE IV STEP 3	2	7	14
PHASE II STEP 2B	2	7	14	PHASE IV STEP 4	2	7	14

TABLE 2. PCMS FOR FRONTAGE RD CLOSURES

PHASE/STEP	# OF SIGNS	DAYS/SIGN	DAYS
PHASE 2 STEP 1	1	28	28
PHASE 3 STEP 1	1	28	28
		SUBTOTAL	56

15.) ALL DRUMS USED ON THIS PROJECT FOR TRAFFIC CONTROL SHALL BE PLASTIC. PLASTIC DRUMS SHALL BE USED IN ACCORDANCE WITH PLANS AND MANUFACTURER'S RECOMMENDATION, OR AS APPROVED BY THE ENGINEER.

16.) THE CONTRACTOR SHALL PROVIDE TRUCK MOUNTED ATTENUATORS ON ALL SHADOW VEHICLES AS SHOWN ON THE TCP STANDARD SHEETS. SHADOW VEHICLES EQUIPPED WITH TRUCK MOUNTED ATTENUATORS ARE REQUIRED AS SHOWN ON TRAFFIC CONTROL PLAN (TCP) STANDARDS. THE CONTRACTOR SHALL PROVIDE TO THE ENGINEER A LETTER CERTIFYING THAT ALL TRUCK-MOUNTED ATTENUATORS (TMA) USED ON THIS PROJECT THAT WERE PURCHASED ON OR AFTER OCTOBER 1, 1998 HAVE BEEN FOUND TO BE CRASHWORTHY USING THE CRITERIA OUTLINED IN THE NATIONAL COOPERATIVE HIGHWAY RESEARCH PROGRAM (NCHRP) REPORT 350. IF THE TMA WAS PURCHASED PRIOR TO OCTOBER 1, 1998, A LETTER CERTIFYING CRASHWORTHINESS USING THE CRITERIA OUTLINED IN EITHER NCHRP REPORTS 230 OR 350 SHALL BE PROVIDED TO THE ENGINEER.

CONCRETE TRAFFIC BARRIERS/RAILING

1.) THE CONTRACTOR SHALL PROVIDE ALL TEMPORARY PRECAST CONCRETE TRAFFIC BARRIERS AS REQUIRED FOR THE VARIOUS PHASES OF CONSTRUCTION. SSCB TY 3 CONCRETE TRAFFIC BARRIER WILL BE REQUIRED FOR EXISTING BRIDGES IN CONSTRUCTION PHASES IV. ALL OTHER CONCRETE TRAFFIC SHALL BE SSCB TY 2 42 INCHES HIGH. SLOTTED BARRIERS SHALL BE PROVIDED WHERE TEMPORARY ROADWAY DRAINAGE IS REQUIRED. THE CONTRACTOR WILL BE ALLOWED TO RE-USE THE SSCB MAINLANES SECTIONS, PROVIDED THEY HAVE NOT BEEN DAMAGED WHILE BEING USED FOR TRAFFIC CONTROL. EACH BARRIER SECTION TO BE RE-USED SHALL BE INDIVIDUALLY APPROVED BY THE ENGINEER. PROVIDING AND HANDLING OF TEMPORARY PRECAST CONCRETE TRAFFIC BARRIERS WILL BE PAID FOR UNDER ITEM 512, "PORTABLE CONCRETE TRAFFIC BARRIER".

2.) ALL TEMPORARY CONCRETE TRAFFIC BARRIERS FURNISHED BY THE CONTRACTOR AND NOT UTILIZED AS PERMANENT BARRIER (MOVE AND RESET) SHALL BECOME THE PROPERTY OF TXDOT. THE CONTRACTOR SHALL REMOVE AND DELIVER THESE BARRIERS AND RAILINGS TO A LOCATION SPECIFIED BY THE ENGINEER.

3.) BARRIER REFLECTORS SHALL BE INSTALLED ON ALL TEMPORARY CONCRETE TRAFFIC BARRIERS.

4.) PHASES II THROUGH IV WILL REQUIRE THE USE OF TEMPORARY REUSABLE ENERGY ABSORBING CRASH TERMINAL (REACT 350) SYSTEMS. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO FURNISH, INSTALL AND MAINTAIN THESE SYSTEMS AT THE DESIGNATED LOCATIONS AS SHOWN ON THE PLANS. THESE SYSTEMS SHALL BE FURNISHED, INSTALLED AND PAID FOR IN ACCORDANCE WITH ITEM 5828 "REUSABLE ENERGY ABSORBING TERMINAL" (REACT 350). THESE SYSTEMS SHALL BE RE-USED AS REQUIRED DURING ALL PHASES OF CONSTRUCTION. ANY DAMAGED TEMPORARY SYSTEMS SHALL BE REPAIRED OR REPLACED IMMEDIATELY IN ACCORDANCE WITH CONTRACT PROVISIONS. THESE SYSTEMS SHALL BECOME THE PROPERTY OF TXDOT AND SHALL BE STOCKPILED AT THE AT THE LOCATION SPECIFIED BY THE ENGINEER.

ROADWAY/DETOUR CONNECTIONS

1.) THE CONTRACTOR SHALL COORDINATE THE TRAFFIC CONTROL PLAN AND THE VARIOUS SEQUENCES OF CONSTRUCTION WITH ADJACENT CONSTRUCTION PROJECTS, TO ENSURE THE UNINTERRUPTED AND SAFE FLOW OF TRAFFIC.

2.) THE CONTRACTOR SHALL NOTIFY THE PROPER CITY OR COUNTY AND TXDOT OFFICIALS WHEN MAJOR TRAFFIC CHANGES ARE TO BE MADE. NOTIFICATIONS MUST BE GIVEN A MINIMUM OF THREE DAYS PRIOR TO THE CHANGE. IN ADDITION, THE CONTRACTOR SHALL PROVIDE A WRITTEN WORK PLAN TO THE ENGINEER FOR APPROVAL.

BRIDGE WORK

1.) TEMPORARY NIGHTTIME CLOSURES OF UNIROYAL IN ACCORDANCE WITH THE "TCP UNIROYAL CLOSURE" PLAN DETAILS AND THE TxMUTCD WILL BE PERMITTED FOR HANGING BEAMS, AS WELL AS SLAB POURS BETWEEN THE HOURS OF 8 PM AND 6 AM.

2.) TEMPORARY NIGHTTIME MAINLANE CLOSURES IN ACCORDANCE WITH THE "MAIN LANE CLOSURES" PLAN DETAILS WILL BE PERMITTED FOR HANGING BEAMS AND DECK PANELS, AS WELL AS SLAB POURS BETWEEN THE HOURS OF 8 PM AND 6 AM. WORK ZONE TRAFFIC CONTROL WILL BE IN ACCORDANCE WITH TCP (6-7)-98A AND AS REQUIRED BY THE ENGINEER.

EXISTING ROADS AND/OR PRIVATE DRIVES

1.) THE PORTION OF THIS PROJECT WHICH COINCIDES WITH EXISTING ROADS AND/OR PRIVATE DRIVES SHALL BE KEPT OPEN TO TRAFFIC AT ALL TIMES. UNLESS OTHERWISE PROVIDED FOR OR APPROVED BY THE ENGINEER.

COORDINATION

1.) WHEN CONNECTING PROPOSED ROADWAY AND/OR DETOURS TO SECTIONS OF EXISTING PAVEMENT BEING USED BY TRAFFIC AND SUCH OPERATIONS RESULT IN A DROP-OFF OF MORE THAN 2 INCHES, A 3:1 SLOPE WILL BE REQUIRED. SEE TXDOT GUIDELINES FOR WARNING AND PROTECTIVE DEVICES FOR PAVEMENT "DROP-OFFS". THIS WORK SHALL BE DONE EXPEDITIOUSLY DURING DAYLIGHT HOURS OR AS APPROVED BY THE ENGINEER. NECESSARY FLAGGERS AND APPROPRIATE SIGNING TO SAFELY GUIDE TRAFFIC THROUGH THE WORK AREA WILL BE REQUIRED AS DIRECTED BY THE ENGINEER.

OVERLAY AND SEAL COAT GENERAL NOTES

1.) FOR OVERLAY AND STRIPING, THE CONTRACTOR SHALL USE TXDOT STANDARDS TCP(3-2)-98, TCP(3-3)-98, TCP(6-1)-98, TCP(6-2)-98, TCP(6-3)-98, TCP (6-4)-98, TCP (6-5)-98, TCP(7-1)-98, WZ(UL)-03, WZ(STPM)-03 AND TXMUTCD, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

2.) CONTRACTOR SHALL PERFORM THE OVERLAY IN SECTIONS, WITH LENGTHS TO BE APPROXIMATELY 2 MILES, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

3.) DURING ALL NON-WORKING HOURS (NIGHT, WEEKENDS, ETC.) THE CONTRACTOR SHALL PLACE SIGNS THAT WARN OF UNEVEN LANES (REFER TO STANDARD SHEET WZ(UL)-03) AND REMOVE THE SIGNS DURING ALL WORKING HOURS.

4.) THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING SHORT TERM PAVEMENT MARKINGS UNTIL FINAL PAVEMENT MARKINGS TYPE II ARE IN PLACE. NO SEGMENT OF THE ROADWAY OPEN TO TRAFFIC SHALL REMAIN WITHOUT REFLECTIVE PAVEMENT MARKINGS TYPE II FOR A PERIOD GREATER THAN 14 DAYS UNLESS WEATHER CONDITIONS PROHIBIT PLACEMENT. REFLECTIVE PAVEMENT MARKINGS TYPE II SHALL BE PLACED AS SOON AS WEATHER PERMITS. TYPE I MARKINGS SHALL BE PLACED NO EARLIER THAN 30 AND NO LONGER THAN 45 CALENDAR DAYS AFTER PLACEMENT OF THE TYPE II MARKINGS.

5.) ALL SIGNS, BARRICADES AND CHANNELIZING DEVICES NECESSARY FOR TRAFFIC CONTROL DURING THE OVERLAY OPERATIONS SHALL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 502.

GENERAL CONSTRUCTION SEQUENCING

GENERAL

CONSTRUCTION AREA LIMITS REFERENCED BELOW AS CONSTRUCTION OR RECONSTRUCTION SHALL INCLUDE ALL ROADWAY, BRIDGE, DRAINAGE, ILLUMINATION, SIGNING AND PAVEMENT MARKINGS NECESSARY TO COMPLETE THE PROPOSED SECTION THAT PHASE/STEP, UNLESS OTHERWISE SHOWN.

CONTRACTOR SHALL NOTIFY TXDOT PERSONNEL A MINIMUM OF SEVEN (7) DAYS IN ADVANCE TO CONTACT THE PUBLIC MEDIA TO NOTIFY AND ADVISE THE TRAVELING PUBLIC PRIOR TO THE PROPOSED CLOSURE OF ANY TRAFFIC LANES FOR EACH PHASE/STEP OF CONSTRUCTION.

ON EXISTING SECTIONS, NOT WITHIN THE LIMITS OF CONSTRUCTION OF THE PHASE/STEP AS REFERENCED BELOW, EXISTING SIGNS, UNLESS OTHERWISE SHOWN OR NOTED, SHALL REMAIN AND CONTROL TRAFFIC. CONFLICTING SIGNS SHALL BE COVERED.

ON PROPOSED SECTIONS, COMPLETED IN A PREVIOUS PHASE/STEP, PROPOSED SIGNS, UNLESS OTHERWISE SHOWN OR NOTED, SHALL CONTROL TRAFFIC. PROPOSED SIGNS THAT CONFLICT WITH CONSTRUCTION SIGNS SHALL BE COVERED.

CONTRACTOR SHALL NOT PROCEED TO THE NEXT PHASE/STEP UNTIL THE PREVIOUS PHASE/STEP IS COMPLETED, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

PLACEMENT OF TEMPORARY SSCB UNDER TRAFFIC SHALL BE DONE USING LANE CLOSURES DURING OFF-PEAK HOURS USING TCP (2-4)-03 FOR FRONTAGE ROADS AND TCP (6-1)-98A FOR MAINLANES.

SEE NOTES AT THE END OF THE GENERAL CONSTRUCTION SEQUENCING FOR APPROXIMATE LIMITS OF PROPOSED RAMPS.

BARRIER SHOWN ON PLAN SHEETS MAY BE BARRIER RELOCATED FROM A PREVIOUS STAGE/STEP OF CONSTRUCTION. QUANTITIES OF BARRIER SHOWN ON THE SUMMARY SHEETS ARE ESTIMATED QUANTITIES OF BARRIER THAT SHALL BE RELOCATED AND RESET FOR EACH PHASE/STEP OF CONSTRUCTION.

PHASE I. PROJECT SETUP

STEP 1. INSTALL PROJECT LIMITS SIGNS AND BARRICADES. SEE "TRAFFIC CONTROL PLAN ADVANCE WARNING SIGNS" SHEETS, AS WELL AS BARRICADES & CONSTRUCTION STANDARDS (BC SHEETS) FOR DETAILS AND REQUIREMENTS.

PHASE II. CONSTRUCTION OF SOUTHBOUND FRONTAGE ROAD FROM STA. 243+50.00 TO STA. 429+22.20, CARRIER DRIVE SOUTHBOUND BRIDGE ABUTMENT, TEMPORARY RAMP TRSB2 AND TEMPORARY PAVEMENT. NOTE THAT THE EXISTING SOUTHBOUND ENTRANCE RAMP FROM UNIROYAL SHALL REMAIN OPEN UNTIL THE BEGINNING OF PHASE IV STEP 2B AND ACCESS SHALL BE MAINTAINED FROM UNIROYAL TO THIS RAMP.

STEP 1A. CONSTRUCT TEMPORARY RAMP TRSB2, TEMPORARY PAVEMENT AND SOUTHBOUND FRONTAGE ROAD FROM STA. 325+00.00 TO STA. 329+95.38.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO CLOSE MAINLANE SHOULDER AND INSIDE LANE OF SOUTHBOUND FRONTAGE ROAD, AS SHOWN ON THE PLAN SHEETS.. MAINLANE SHOULDER CLOSURE WILL REQUIRE TEMPORARY SSCB. LANE CLOSURE ON FRONTAGE ROAD SHALL BE FOR DAYTIME OPERATIONS ONLY. DURING NON WORKING HOURS, FRONTAGE ROAD SHALL BE OPEN AND ANY WORK AREAS ADJACENT TO THE PAVEMENT SHALL BE SLOPED AT 3:1 OR FLATTER AND CW8-9A SIGNS ("SHOULDER DROP OFF") AND BARRELS SHALL BE PLACED ALONG THE EDGE OF PAVEMENT WITHIN THE CONSTRUCTION AREA.
2. CONSTRUCT TEMPORARY RAMP (TRSB2), ADJACENT TEMPORARY PAVEMENT AND SOUTHBOUND FRONTAGE, THRU TY "A" ACP, AS SHOWN IN THE PLAN SHEETS.
3. STRIPE COMPLETED SECTION WITH TEMPORARY STRIPING, ADD BARRICADES AND SIGNING AS SHOWN.

STEP 1B. CONSTRUCT SECTION 1 OF THE SOUTHBOUND FRONTAGE ROAD FROM STA. 329+95.38 TO STA. 429+22.20. ALSO CONSTRUCT TEMPORARY PAVEMENT, WITHIN LIMITS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO CLOSE THE EXISTING FRONTAGE ROAD FROM STA. 329+95.38 TO STA. 429+22.20 AND CLOSE OUTSIDE LANE FROM STA. 242+51.09 TO STA. 329+95.38. WITH WORK ZONE DEVICES AND MARKINGS, OPEN EXISTING FRONTAGE ROAD FROM STA. 242+51.09 TO STA. 329+95.38 (WITH ACCESS FROM TEMPORARY RAMP TRSB2 AND TEMPORARY PAVEMENT CONSTRUCTED IN STEP 1A) AS ONE WAY TRAFFIC. ALSO SWITCH TRAFFIC FROM TWO-WAY TO ONE-WAY TRAFFIC CONTROL FROM STA. 429+22.20 TO UNIROYAL.

STEP 1B. (CONT'D)
2. RECONSTRUCT FULL WIDTH OF FRONTAGE ROAD, WITHIN LIMITS SPECIFIED, UP THROUGH TY "A" HOT MIX. ALSO, CONSTRUCT TEMPORARY PAVEMENT, WITHIN LIMITS SPECIFIED. INCLUDED IN THE RECONSTRUCTION IS COMPLETELY CONSTRUCTING RAMP "J", PARTIALLY CONSTRUCTING RAMP "K" (FROM FRONTAGE ROAD TO MAINLANE GORE) AND CONSTRUCTING THE SOUTHBOUND SIDE BRIDGE ABUTMENT AT CARRIER DR.
3. STRIPE COMPLETED SECTION WITH TEMPORARY STRIPING AS PER THE PLAN SHEETS. STRIPING SHALL BE PLACED IN THE PERMANENT LOCATIONS, UNLESS OTHERWISE SHOWN.

STEP 2A. CONSTRUCT INSIDE HALF-SECTION OF SECTION 2 OF THE SOUTHBOUND FRONTAGE ROAD FROM STA. 243+50.00 TO STA. 329+95.38.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO CLOSE THE INSIDE SECTION OF THE FRONTAGE ROAD AND OUTSIDE SHOULDER OF THE SOUTHBOUND MAINLANES. THIS WILL REQUIRE THE USE OF TEMPORARY SSCB AND REACTS TO BE PLACED PRIOR TO OPENING FOR TRAFFIC. CLOSE TEMPORARY RAMP TRSB2. NOTE THAT TRAFFIC SHALL BE MAINTAINED ON THE OUTSIDE SECTION OF THE EXISTING FRONTAGE ROAD AND THE TEMPORARY PAVEMENT CONSTRUCTED IN STEP 1A.
2. RECONSTRUCT INSIDE SECTION OF THE FRONTAGE ROAD, WITHIN LIMITS SPECIFIED, UP THROUGH TY "A" HOT MIX. THIS WORK WILL INCLUDE THE REMOVAL OF THE TEMPORARY RAMP (TRSB2) CONSTRUCTED IN STEP 1A.
3. STRIPE COMPLETED SECTION WITH TEMPORARY STRIPING AS PER THE PLAN SHEETS. STRIPING SHALL BE PLACED AS SHOWN IN STEP 2B.

STEP 2B. CONSTRUCT OUTSIDE HALF-SECTION OF SECTION 2 OF THE SOUTHBOUND FRONTAGE ROAD FROM STA. 243+50.00 TO STA. 329+95.38.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES TO CLOSE OUTSIDE SECTION OF THE FRONTAGE ROAD. THIS SHALL INCLUDE TEMPORARY SSCB AND REACTS, AS SHOWN. NOTE THAT ACCESS TO ADJACENT DRIVEWAYS SHALL BE MAINTAINED AT ALL TIMES.
2. RECONSTRUCT OUTSIDE SECTION OF THE FRONTAGE ROAD, WITHIN LIMITS SPECIFIED, UP THROUGH TY "A" HOT MIX.
3. REMOVE BARRIERS, REMOVE REACTS AND STRIPE SECTION WITH TEMPORARY STRIPING AS PER THE PLAN SHEETS. STRIPING SHALL BE PLACED IN THE PERMANENT LOCATIONS, UNLESS OTHERWISE SHOWN. OPEN THE COMPLETED SECTION TO TRAFFIC.

STEP 3. CONSTRUCT TY "C" FINAL OVERLAY AND FINAL STRIPING FROM STA. 243+50.00 TO STA. 429+22.20.
1. SEE TRAFFIC CONTROL PLAN GENERAL NOTES OVERLAY AND SEAL COAT GENERAL NOTES SECTION FOR ADDITIONAL INFORMATION AND DETAILS FOR THE TRAFFIC CONTROL DURING THIS STEP OF CONSTRUCTION.

PHASE III. CONSTRUCTION OF NORTHBOUND FRONTAGE ROAD FROM STA. 167+20.00 TO STA. 392+80.67 AND TRES EQUIS NORTHBOUND BRIDGE ABUTMENT.

STEP 1. CONSTRUCT SECTION 1 OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 167+20.00 TO STA. 257+66.50.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO CLOSE THE FRONTAGE ROAD WITHIN THE CONSTRUCTION LIMITS, AS SHOWN IN THE PLANS. NOTE THAT ALL NORTHBOUND FRONTAGE ROAD TRAFFIC MUST ENTER THE FREEWAY AT THE FIRST ENTRANCE RAMP NORTH LP 20. TRAFFIC ON THE REMAINING SECTIONS OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 257+66.50 TO UNIROYAL SHALL REMAIN TWO-WAY TRAFFIC.
2. RECONSTRUCT FULL WIDTH OF FRONTAGE ROAD, WITHIN LIMITS SPECIFIED, UP THROUGH TY "A" HOT MIX. INCLUDED IN THE RECONSTRUCTION IS COMPLETELY CONSTRUCTING RAMP "A" AND THE TRES EQUIS NORTHBOUND BRIDGE ABUTMENT.
3. UPON COMPLETION, STRIPE COMPLETED SECTION WITH TEMPORARY STRIPING, AS PER PLAN SHEETS. STRIPING WILL BE IN PERMANENT LOCATIONS, UNLESS OTHERWISE SHOWN.

STEP 2. CONSTRUCT OUTSIDE HALF-SECTION OF SECTION 2 OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 257+66.50 TO STA. 392+80.00, EXCEPT FROM STA. 271+16.46 TO STA. 280+59.33. OUTSIDE HALF WITHIN EXCEPTION LIMITS SHALL BE CONSTRUCTED IN STEP 4.
1. REMOVE EXISTING PAVEMENT MARKINGS AND INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO SWITCH TRAFFIC ON THE NORTHBOUND FRONTAGE ROAD FROM TWO-WAY TRAFFIC TO ONE-WAY TRAFFIC. PRIOR TO SWITCHING TRAFFIC, ADVANCE NOTICE SHALL BE REQUIRED, AS NOTED IN THE TCP GENERAL NOTES. NOTE THAT FROM CARRIER TO UNIROYAL TRAFFIC SHALL REMAIN TWO-WAY TRAFFIC.
2. PLACE TEMPORARY SSCB, AS SHOWN IN THE PLANS, TO PROTECT THE CONSTRUCTION AREAS.
3. RECONSTRUCT OUTSIDE HALF-SECTION, UP TO TY "A" HOT MIX FROM STA. 257+66.50 TO STA. 392+80.00 OF THE PROPOSED FRONTAGE ROAD, EXCEPT FROM STA. 271+16.46 TO STA. 280+59.33.
4. STRIPE COMPLETED SECTIONS OF ROADWAY FOR TRAFFIC AS SHOWN IN THE PLANS. SEE STEP 3 FOR LOCATIONS.

HOUFILE023 \hciwin\cf0130\ 350CNP1.dgn-03

STEP 3. CONSTRUCT INSIDE HALF-SECTION OF SECTION 2 OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 257+66.50 TO STA. 392+80.00. NOTE THAT THIS DOES INCLUDE FROM STA. 271+16.46 TO STA. 280+59.33.
1. REMOVE EXISTING PAVEMENT MARKINGS, INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO SWITCH TRAFFIC TO THE SECTION COMPLETED IN STEP 2. TRAFFIC WILL BE MAINTAINED AS ONE-WAY FROM LP 20 TO CARRIER AND TWO-WAY FROM CARRIER TO UNIROYAL. NOTE THAT TEMPORARY SSCB SHALL BE REQUIRED ON THE MAINLANES IN THE LOCATIONS SHOWN.
2. RECONSTRUCT REMAINING INSIDE HALF-SECTION OF THE PROPOSED FRONTAGE ROAD, UP THROUGH TY "A" HOT MIX, FROM STA. 257+66.50 TO STA. 392+80.00. INCLUDED IN THE RECONSTRUCTION WILL BE COMPLETELY CONSTRUCTING RAMPS "C" AND "E".
3. AFTER COMPLETION, STRIPE THE COMPLETED FRONTAGE ROAD WITH TEMPORARY STRIPING, IN THE PERMANENT LOCATION, UNLESS OTHERWISE SHOWN, AND OPEN THE FRONTAGE ROAD TO TRAFFIC. THIS WILL REQUIRE REMOVING ANY CONFLICTING STRIPING AND REMOVING THE TEMPORARY SSCB, EXCEPT AS NOTED FOR STEP 4.

STEP 4. CONSTRUCT OUTSIDE HALF-SECTION OF SECTION 2 OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 271+16.46 TO STA. 280+59.33. INSIDE SECTION CONSTRUCTED IN STEP 3.
1. SWITCH TRAFFIC TO THE INSIDE HALF-SECTION COMPLETED IN STEP 3. THIS WILL REQUIRE PLACING THE NECESSARY TEMPORARY SSCB, AS SHOWN IN THE PLANS.
2. RECONSTRUCT REMAINING OUTSIDE HALF-SECTION OF PROPOSED FRONTAGE ROAD, UP THROUGH TY "A" HOT MIX.
3. ONCE COMPLETED, REMOVE CONFLICTING STRIPING AND TEMPORARY SSCB AND PLACE TEMPORARY STRIPING IN THE PERMANENT LOCATIONS TO OPEN FRONTAGE ROAD TO TRAFFIC, EXCEPT WHERE SHOWN OTHERWISE.

STEP 5. CONSTRUCT TY "C" FINAL OVERLAY AND FINAL STRIPING FROM STA. 167+20.00 TO STA. 392+80.00.
1. SEE TRAFFIC CONTROL PLAN GENERAL NOTES OVERLAY AND SEAL COAT GENERAL NOTES SECTION FOR ADDITIONAL INFORMATION AND DETAILS FOR THE TRAFFIC CONTROL DURING THIS STEP OF CONSTRUCTION.

PHASE IV. CONSTRUCTION OF NORTHBOUND AND SOUTHBOUND MAINLANES FROM STA. 172+80.00 TO STA. 453+50.00, CARRIER DR NORTHBOUND BRIDGE ABUTMENT AND SUPERSTRUCTURE, WIDENING OF UNIROYAL OVERPASS, NORTH DETOUR SECTION FROM STA. 453+50.00 TO STA. 460+50.00 AND SOUTH DETOUR SECTION FROM STA. 165+80.00 TO STA. 172+80.00.

STEP 1A. CONSTRUCT PROPOSED RETAINING WALL ALONG NORTHBOUND CARRIER DR EXISTING RETAINING WALL AND NORTHBOUND CARRIER DR BRIDGE ABUTMENT.
1. SET TEMPORARY SSCB AS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS TO CLOSE THE NORTHBOUND MAINLANES SHOULDER.
2. CONSTRUCT RETAINING WALL IN LIMITS SPECIFIED IN THE PLANS.
3. REMOVE TEMPORARY SSCB AND REOPEN THE SHOULDER.

STEP 1B. CONSTRUCT INSIDE OF SEGMENT 1 OF THE MAINLANES FROM STA. 389+50.00 TO STA. 453+50.00 AND DETOUR SECTION FROM STA. 453+50.00 TO STA. 460+50.00.
1. RESET TEMPORARY SSCB FROM NORTHBOUND FRONTAGE ROAD.
2. SHIFT TRAFFIC TO OUTSIDE SECTION OF MAINLANES WITHIN LIMITS SPECIFIED.
3. RECONSTRUCT INSIDE SECTION OF THE MAINLANES FROM STA. 389+50.00 TO STA. 453+50.00, UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX. CONSTRUCT DETOUR FROM STA. 453+50.00 TO STA. 460+50.00. CONSTRUCT WIDENING OF UNIROYAL OVERPASS (INCLUDING SUBSTRUCTURE AND SUPERSTRUCTURE). TEMPORARY OVERNIGHT CLOSURES OF UNIROYAL, FROM 8 PM TO 6 AM WILL BE PERMITTED TO PERFORM THE BRIDGE CONSTRUCTION. SEE "TRAFFIC CONTROL PLAN UNIROYAL CLOSURE" SHEET FOR ADDITIONAL INFORMATION ON DETOURS. THIS DETOUR IS FOR LOCAL UNIROYAL TRAFFIC ONLY. NOTE THIS SHALL REQUIRE ADVANCE NOTICE, AS NOTED IN THE TCP GENERAL NOTES.
4. PLACE TEMPORARY SSCB IN THE COMPLETED MIDDLE SECTION AND STRIPE AS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS (AS SHOWN IN STEP 2A). NOTE THAT A MEDIAN BARRIER GATE SHALL BE PLACED AT THE LOCATION SHOWN IN THE PLANS.

STEP 2A. EXCAVATE AND GRADE ROADWAY, WITHIN LIMITS SHOWN BELOW FOR DRAINAGE PURPOSES. CONSTRUCT CARRIER BRIDGE SUBSTRUCTURE AND SUPERSTRUCTURE.
1. IMMEDIATELY AFTER SWITCHING TRAFFIC TO THE CENTER COMPLETED SECTION OF THE MAINLANES, THE CONTRACTOR SHALL BE REQUIRED TO OBLITERATE THE EXISTING PAVEMENT FROM STA. 403+00.00 TO STA. 410+00.00 (BOTH NORTHBOUND AND SOUTHBOUND). THE CONTRACTOR SHALL THEN GRADE THE AREA TO DRAIN TO THE STRUCTURE AT STA. 394+32.36 (CULVERT K).. THE CONTRACTOR SHALL NOT BE ALLOWED TO CONTINUE WITH ANY CONSTRUCTION UNTIL THE OBLITERATION AND GRADING ARE COMPLETED.

STEP 2B. (CONT'D)
2. AFTER COMPLETION OF ITEM 1, CONSTRUCT CARRIER NORTHBOUND BRIDGE ABUTMENT AND SUPERSTRUCTURE. TEMPORARY OVERNIGHT MAINLANE CLOSURES, FROM 8 PM TO 6 AM WILL BE PERMITTED TO HANG BRIDGE BEAMS AND TO POUR THE SLAB. ADVANCE NOTICE OF THE CLOSURE SHALL BE REQUIRED. SEE "TRAFFIC CONTROL PLAN MAIN LANES CLOSURE CARRIER DR" SHEET FOR ADDITIONAL INFORMATION ON DETOURING. NOTE THAT THE EXISTING T501 RAIL ALONG THE INSIDE EDGE OF THE NORTHBOUND FRONTAGE ROAD SHALL REMAIN IN PLACE UNTIL THE PROPOSED RAIL IS COMPLETED.

STEP 2B. CONSTRUCT OUTSIDE SECTION OF SEGMENT 1 OF THE MAINLANES FROM STA. 396+50.00 TO STA. 453+50.00, SOUTHBOUND FRONTAGE ROAD (INSIDE HALF-SECTION) FROM STA. 429+22.20 TO STA. 436+36.94, NORTHBOUND FRONTAGE ROAD (INSIDE HALF-SECTION) FROM STA. 417+65.99 TO STA. 434+87.81 AND LEVEL-UP NB & SB MAINLANES FROM STA. 453+50.00 TO STA. 460+50.00.
1. CONSTRUCT LEVEL-UP FROM STA. 453+50.00 TO 460+50.00 ON NB & SB MAINLANES. NOTE THAT THE LEVEL-UP OPERATION SHALL BE COMPLETED PRIOR TO SWITCHING TRAFFIC. THIS WILL REQUIRE A ONE-LANE LANE CLOSURE, PERFORMED FROM 8 PM TO 6 AM, UTILIZING THE TCP (6-1)-98A STANDARD. ALSO, STRIPE COMPLETED CARRIER BRIDGE WITH TEMPORARY STRIPING IN THE PERMANENT LOCATIONS.
2. SWITCH TRAFFIC TO THE INSIDE CONSTRUCTED SECTION AND RECONSTRUCT OUTSIDE PORTION OF ROADWAY. THIS WILL INCLUDE PROPOSED RAMPS "F" AND "K", UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX. CONSTRUCT INSIDE HALF-SECTION OF NORTHBOUND AND SOUTHBOUND FRONTAGE ROADS, WITHIN LIMITS SPECIFIED, UP THROUGH TY "A" HOT MIX.
3. ONCE COMPLETED, STRIPE COMPLETED SECTION OF FRONTAGE ROADS AND PLACE TEMPORARY SSCB TO SHIFT TRAFFIC FOR STEP 2C.

STEP 2C. CONSTRUCT OUTSIDE HALF-SECTION OF SOUTHBOUND FRONTAGE ROAD FROM STA. 429+22.20 TO STA. 436+36.94 AND OUTSIDE HALF-SECTION OF THE NORTHBOUND FRONTAGE ROAD FROM STA. 417+65.99 TO STA. 434+87.81. NOTE THAT THE MAINLANE TRAFFIC SHALL REMAIN IN THE INSIDE SECTION UNTIL THE COMPLETION OF STEP 2C.
1. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO SWITCH TRAFFIC ON THE FRONTAGE ROADS FROM THE OUTSIDE SECTION TO THE COMPLETED INSIDE SECTION.
2. CONSTRUCT FRONTAGE ROADS, UP THROUGH TY "A" HOT MIX.
3. REMOVE BARRIER AND SWITCH TRAFFIC TO THE COMPLETED SECTIONS OF THE MAINLANES AND FRONTAGE ROADS, AS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS. NOTE THAT MAINLANES SHALL NOT BE STRIPED AS THREE LANES (FINAL PROPOSED SECTION) UNTIL THE MAINLANES ARE COMPLETED AT THE END OF PHASE V.

STEP 2D. CONSTRUCT TY "C" FINAL OVERLAY AND FINAL STRIPING ON SOUTHBOUND FRONTAGE ROAD FROM STA. 429+22.20 TO STA. 436+36.94 AND ON NORTHBOUND FRONTAGE ROAD FROM STA. 417+65.99 TO STA. 434+87.81. ALSO CONSTRUCT SEAL COAT ON NORTHBOUND FRONTAGE ROAD FROM STA. 392+80.00 TO STA. 417+65.99.
1. SEE TRAFFIC CONTROL PLAN GENERAL NOTES OVERLAY AND SEAL COAT GENERAL NOTES SECTION FOR ADDITIONAL INFORMATION AND DETAILS FOR THE TRAFFIC CONTROL DURING THIS STEP OF CONSTRUCTION.

STEP 3. CONSTRUCT INSIDE SECTION OF SEGMENT 2 OF THE MAINLANES FROM STA. 291+27.36 TO STA. 389+50.00.
1. RESET TEMPORARY SSCB FROM PREVIOUS PHASES/STEPS OF CONSTRUCTION.
2. SHIFT TRAFFIC TO OUTSIDE SECTION OF MAINLANES WITHIN CONSTRUCTION LIMITS.
3. RECONSTRUCT INSIDE SECTION OF THE MAINLANES FROM STA. 291+27.36 TO STA. 389+50.00, UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX.
4. PLACE TEMPORARY SSCB FROM PREVIOUS PHASES/STEPS OF CONSTRUCTION AND STRIPE AS SHOWN IN THE PLAN SHEETS AND TYPICAL SECTIONS (AS SHOWN IN STEP 4).

STEP 4. CONSTRUCT OUTSIDE SECTION OF SEGMENT 2, OF THE MAINLANES, FROM STA. 298+27.36 TO STA. 396+50.00.
1. SHIFT TRAFFIC TO INSIDE SECTION COMPLETED IN STEP 3.
2. RECONSTRUCT OUTSIDE SECTION OF THE MAINLANES FROM STA. 298+27.36 TO STA. 396+50.00, UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX.
3. REMOVE BARRIER AND SWITCH TRAFFIC TO THE COMPLETED SECTION OF MAINLANES, AS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS. NOTE THAT MAINLANES SHALL NOT BE STRIPED AS THREE LANES (FINAL PROPOSED SECTION) UNTIL THE MAINLANES ARE COMPLETED AT THE END OF PHASE V.

B50CNP1.dgn-03 HOUFILE023 \hclvil\cf0130\ 4/18/2003

STEP 5. CONSTRUCT INSIDE OF SEGMENT 3 OF THE MAINLANES FROM STA. 172+80.00 TO STA. 291+27.36 AND SOUTH DETOUR SECTION FROM STA. 165+80.00 TO STA. 172+80.00.
1. RESET TEMPORARY SSCB FROM PREVIOUS PHASES/STEPS TO LOCATIONS SHOWN ON THE PLANS.
2. SHIFT TRAFFIC TO THE OUTSIDE SECTION OF THE MAINLANES WITHIN THE LIMITS SHOWN.
3. RECONSTRUCT MAINLANES FROM STA. 172+80.00 TO STA. 291+27.36, UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX. ALSO, CONSTRUCT SOUTH DETOUR SECTION FROM STA. 165+80.00 TO STA. 172+80.00, UP THROUGH TY "A" HOT MIX.
4. PLACE TEMPORARY SSCB IN CONSTRUCTED MIDDLE SECTION, AND STRIPE, AS SHOWN IN THE TYPICAL SECTIONS PLAN SHEETS (AS SHOWN IN STEP 6).

STEP 6. CONSTRUCT OUTSIDE OF SEGMENT 3 OF THE MAINLANES FROM STA. 172+80.00 TO STA. 298+27.36. CONSTRUCT TEMPORARY RAMPS TRSB1 AND TRNB1.
1. SWITCH TRAFFIC TO THE INSIDE CONSTRUCTED SECTION FROM STEP 5 AND RECONSTRUCT OUTSIDE PORTION OF MAINLANES FROM STA. 172+80.00 TO STA. 298+27.36, UP THROUGH HEAVY DUTY STONE MATRIX HOT MIX. ALSO CONSTRUCT TEMPORARY RAMPS TRSB1 AND TRNB1. TEMPORARY RAMPS TO REMAIN CLOSED UNTIL STEPS 7 & 8, RESPECTIVELY.
2. REMOVE BARRIER, STRIPE AS SHOWN IN THE TYPICAL SECTIONS AND PLAN SHEETS, AND SWITCH TRAFFIC TO THE COMPLETED SECTION OF THE MAINLANES. NOTE THAT MAINLANES SHALL NOT BE STRIPED AS THREE LANES (FINAL PROPOSED SECTION) UNTIL THE MAINLANES ARE COMPLETED AT THE END OF PHASE V.

STEP 7. CONSTRUCT SECTION 3 OF THE SOUTHBOUND FRONTAGE ROAD FROM STA. 180+00.00 TO STA. 207+94.00.
1. CONVERT SOUTHBOUND FRONTAGE ROAD FROM 1-WAY TRAFFIC TO 2-WAY TRAFFIC FROM THE INTERSECTION OF LOOP 20 TO STA. 180+00.00. THIS WILL INVOLVE REMOVING THE EXISTING MARKINGS AND PLACING TEMPORARY MARKINGS AND SIGNING TO DIRECT TRAFFIC, AS SHOWN IN THE PLANS. ALL EXISTING CONFLICTING SIGNING SHALL BE COVERED. CONFLICTING SIGNAL HEADS AT THE INTERSECTION OF THE SOUTHBOUND FRONTAGE ROAD AND THE WEST BOUND LANES OF LP 20 SHALL BE COVERED.
2. INSTALL WORK ZONE TRAFFIC CONTROL DEVICES AND MARKINGS TO CLOSE THE FRONTAGE ROAD WITHIN THE CONSTRUCTION LIMITS. FRONTAGE ROAD SHALL REMAIN OPEN FROM STA. 207+94.00 TO UNIROYAL, AS 1-WAY TRAFFIC. TRAFFIC SHALL BE REQUIRED TO ENTER THE FREEWAY USING THE TEMPORARY RAMP TRSB1 CONSTRUCTED IN STEP 6.
3. RECONSTRUCT FULL WIDTH OF FRONTAGE ROAD, WITHIN LIMITS, UP THROUGH TY "A" HOT MIX. CONSTRUCT SOUTHBOUND TRES EQUIS BRIDGE ABUTMENT.
4. AFTER COMPLETION OF ITEM 3, CONVERT 2-WAY TRAFFIC ON THE FRONTAGE ROAD BACK TO 1-WAY TRAFFIC USING PROPOSED STRIPING. OPEN COMPLETED SECTION OF FRONTAGE ROAD TO TRAFFIC FROM LP 20 TO UNIROYAL.
5. REMOVE TEMPORARY RAMP AT KILLAM INDUSTRIAL BLVD. CONSTRUCTED UNDER PHASE IV STEP 6. TRAFFIC CONTROL SHALL BE IN ACCORDANCE WITH TCP (2-1)-98 AND THE TXMUTCD. THE AREA DISTURBED BY THE TEMPORARY RAMP SHALL BE GRADED AND RESTORED TO CONDITIONS REQUIRED IN THE PROPOSED CROSS-SECTIONS AND PLAN SHEETS.

STEP 8. CONSTRUCT TY "C" FINAL OVERLAY AND FINAL STRIPING ON SOUTHBOUND FRONTAGE ROAD FROM STA. 180+00.00 TO STA. 207+94.00. ALSO SEAL COAT SOUTHBOUND FRONTAGE ROAD FROM MILO INTERCHANGE TO STA. 180+00.00 AND FROM STA. 207+94.00 TO STA. 243+50.00.
1. SEE TRAFFIC CONTROL PLAN GENERAL NOTES OVERLAY AND SEAL COAT GENERAL NOTES SECTION FOR ADDITIONAL INFORMATION AND DETAILS FOR THE TRAFFIC CONTROL DURING THIS STEP OF CONSTRUCTION.

STEP 9. CONSTRUCT CARRIER DR. SUPERSTRUCTURE.
1. CLOSE THE DIRECT CONNECTOR AND MAINLANES AS SHOWN IN THE "TRAFFIC CONTROL PLAN FOR MAIN LANE CLOSURE TRES EQUIS" PLAN SHEETS.
2. AFTER CLOSING THE DIRECT CONNECTOR AND THE MAINLANES, THE TRES EQUIS BRIDGE BEAMS MAY BE HUNG. THE SLAB POURED AND THE BRIDGE COMPLETED. THIS WORK SHALL BE PERFORMED DURING THE OVERNIGHT PERIOD FROM 8 PM TO 6 AM.
3. UPON COMPLETION OF THE BRIDGE, STRIPE AND OPEN TO TRAFFIC.

PHASE V. CONSTRUCT FINAL OVERLAY AND STRIPING FOR NORTHBOUND AND SOUTHBOUND MAINLANES.

1. SEE TRAFFIC CONTROL PLAN GENERAL NOTES OVERLAY AND SEAL COAT GENERAL NOTES SECTION FOR ADDITIONAL INFORMATION AND DETAILS FOR THE TRAFFIC CONTROL DURING THIS STEP OF CONSTRUCTION.

PHASE VI. PROJECT CLEANUP.

SECTION C-C

THIS ITEM WAS NOT INSTALLED PLAN SHTS # 234, 235 & 236

NOTES:

ALL CONCRETE ~~SHALL BE~~ CLASS "C".

ALL LONGITUDINAL REINFORCING ~~SHALL BE~~ GRADE 60.

LIFTING DEVICES AND ATTACHMENTS TO BARRIER ~~SHALL BE~~ APPROVED BY THE ENGINEER.

ANCHORAGE PLATES ~~SHALL BE~~ HOT-DIP GALVANIZED IN CONFORMANCE TO ASTM DESIGNATION A123.

C5x9.0 CHANNELS, 1 1/8" O BOLTS, NUTS AND WASHERS ARE NOT FURNISHED WITH THIS BARRIER SECTION BUT ARE INCLUDED WITH THE ADJACENT SECTION.

PAYMENT FOR MEDIAN BARRIER GATES ~~SHALL BE~~ MADE AT THE UNIT PRICE BID FOR EACH "MEDIAN BARRIER GATE".

PAYMENT FOR CONCRETE BARRIER ~~SHALL BE~~ INCLUDED FOR PAYMENT WITH ITEM 512 "CONCRETE TRAFFIC BARRIER".

TYPICAL USAGE:				
MOBILE	SHORT DURATION	SHORT TERM STATIONARY	INTERMEDIATE TERM STATIONARY	LONG TERM STATIONARY
	✓	✓		

GENERAL NOTES:

1. Unless otherwise stated in the plans, flags attached to signs are REQUIRED.
2. All traffic control devices illustrated are REQUIRED, except those denoted with the triangle symbol may be omitted when stated elsewhere in the plans.
3. On high speed facilities advance warning signs should be installed approximately 3X from the work area or from the beginning of a lane or shoulder taper. On low speed facilities the advance warning signs should be placed based on the "X" minimum distance.
4. Inactive work vehicles or other equipment should be parked near the right-of-way line and not parked on the paved shoulder.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

Standards Engineer
Traffic Operations Division - TE

GENERAL NOTES:

1. Flags attached to signs are REQUIRED.
2. All traffic control devices illustrated are REQUIRED, except those denoted with the triangle symbol may be omitted when stated elsewhere in the plans.
3. The BE PREPARED TO STOP sign may be installed after the ONE LANE ROAD AHEAD sign, but proper sign spacing shall be maintained.
4. ROAD WORK AHEAD sign may be repeated if the visibility of the work zone is less than 1500'.

TCP(1-2a)

5. YIELD sign traffic control may be used on projects with approaches that have adequate sight distance. For projects in urban areas, work zones should be no longer than one half city block. In rural areas on roadways with less than 4000 ADT, work areas should be no longer than 400'.
6. YIELD TO ONCOMING TRAFFIC sign shall be placed on a support at a 7' minimum mounting height.

TCP(1-2b)

7. Flaggers should use two-way radios or other methods of communication to control traffic.
8. Length of work area should be based on the ability of flaggers to communicate.
9. Distance along curve of work area should be adequate length for motorists to identify and react to flagger signals.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

GENERAL NOTES:

1. Unless otherwise stated in the plans, flags attached to signs are REQUIRED.
2. Channelizing devices used to close lanes may be supplemented with the Chevron Alignment Sign placed on every other channelizing device. Chevrons may be attached to plastic drums as per BC Standards.
3. Channelizing devices used along the work area or along tangent sections may be supplemented with vertical panels (VP) placed on every other channelizing device. If night time conditions make it difficult to see at least two VP's, the VP's may be placed on each channelizing device.
4. In areas with safety lighting or continuous illumination the channelizing devices can be supplemented with delineators.
5. The FORM ONE LINE LEFT sign may be used following the RIGHT LANE CLOSED sign.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

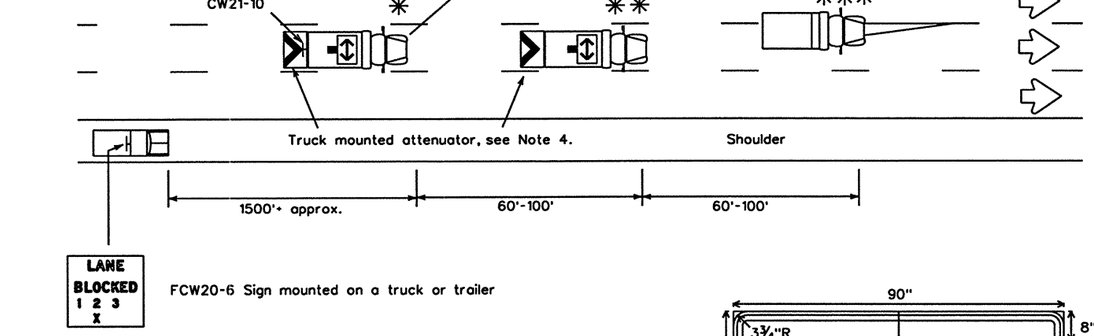
GENERAL NOTES:

1. TRAIL, SHADOW, LEAD, and work vehicles shall be equipped with arrow panels as illustrated. The Engineer will determine if the LEAD VEHICLE and/or TRAIL VEHICLE are required based on prevailing roadway conditions, traffic volume, and sight distance restrictions.
2. All traffic control devices shall be in accordance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD), latest edition.
3. The use of yellow rotating beacons or strobe lights on vehicles are required unless otherwise stated elsewhere in the plans.
4. The use of truck mounted attenuators (TMA) on the SHADOW VEHICLE and the TRAIL VEHICLE are required.
5. Optional striping on the back panel of all truck mounted attenuators shall be 8" red and white reflective sheeting placed in an inverted "V" design. Reflective sheeting shall meet or exceed the reflectivity and color requirements of DEPARTMENTAL MATERIAL SPECIFICATION D-9-8300, TYPE C.
6. Flashing Arrow Panels shall be Type B or Type C as per BC Standards. The panel operation shall be controlled from inside the vehicle.
7. Each vehicle shall have two-way radio communication capability.
8. When work convoys must change lanes, the TRAIL VEHICLE should change lanes first to shadow the other convoy vehicles.
9. Vehicle spacing between TRAIL VEHICLE and SHADOW VEHICLE will vary depending on sight distance restrictions. Motorists approaching the work convoy should be able to see the TRAIL VEHICLE in time to slow down and/or change lanes as they approach the TRAIL VEHICLE.
10. The LANE BLOCKED sign (FCW20-6) shall be used on divided highways and may be mounted on a truck or trailer. For divided highways with two lanes in each direction, the RIGHT or LEFT LANE CLOSED sign (CW20-5, 48" x 48") may be substituted for the LANE BLOCKED sign (FCW20-6).



Shadow and trail vehicle shall be equipped with Truck Mounted Attenuator.

** Taper lengths have been rounded off.
L=Length of Taper (FT.) W=Width of Offset (FT.) S=Posted Speed (MPH)

GENERAL NOTES:

1. All traffic control devices illustrated are REQUIRED, except those denoted with the triangle symbol may be omitted when stated elsewhere in the plans.
2. Drums are the typical channelizing device. Cones or other devices may be used if approved by the Engineer. Drums shall be used during nighttime operations.
3. All construction signs and barricades placed during any phase of work shall remain in place until removal is approved by the Engineer.
4. The Engineer may direct the Contractor to furnish additional signs and barricades as required to maintain traffic flow and motorist safety during construction.
5. Static message board or changeable message signs stating the date and duration of ramp or freeway closure shall be placed a minimum of seven (7) calendar days in advance of actual closure.
6. High level warning flags should be used on advance warning signs during daytime operations. Warning lights may be used to add emphasis to advance warning signs during nighttime operations.
7. Duplicate construction warning signs should be erected on the median side of freeways where median width will permit and traffic volume justifies the signing.
8. The number of closed lanes may be increased provided the spacings of traffic control devices, taper lengths and tangent lengths meet the requirements of the TMUTCD.
9. Warning signs shown shall be appropriately altered for left lane closures.
10. The TCP details may require additional and/or relocation of route shields, guide signs, etc. to guide motorists along entire length of detour due to ramp and freeway closures.
11. See BC Standards for additional sign details.
12. When possible, changeable message signs should be located 500 feet in advance of the last available exit ramp prior to the lane closure to allow motorists an alternate route.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

GENERAL NOTES

The traffic control devices detailed on this sheet will be furnished and erected as directed by the Engineer on sections of roadway where the surfacing operation has covered or obliterated existing pavement markings. These traffic control devices are to be used to supplement those required by BC Standards.

"DO NOT PASS" SIGN (R4-1) and NO-PASSING ZONES

Prior to the beginning of construction, all currently striped no-passing zones should be signed with the DO NOT PASS sign (R4-1) and PASS WITH CARE sign (R4-2) placed at the beginning and end of each zone for each direction of travel except as otherwise provided herein. Signs marking these individual no-passing zones need not be covered prior to construction if the signs supplement the existing pavement markings.

At the discretion of the Engineer, in areas of numerous no-passing zones, several zones may be combined and signed as a single zone. If passing is to be prohibited over one or more lengthy sections, a DO NOT PASS sign and a NEXT XX MILES sign (R20-1) may be used at the beginning of such zones. The DO NOT PASS and NEXT XX MILES signs should be repeated every mile to the end of the no-passing zone. In areas where there is considerable distance between no-passing zones, the end of a no-passing zone may be signed with a PASS WITH CARE and NEXT XX MILES sign.

Depending on traffic volumes and length of sections, it may be desirable to prohibit passing throughout the project to prevent damage to windshields and lights. The DO NOT PASS and NEXT XX MILES sign should be used and repeated as often as necessary for this purpose. Where several existing zones are to be combined into one individual no-passing zone, the sign at the beginning of the zone should be covered until the surfacing operation has passed this location so as not to have the DO NOT PASS sign conflict with existing pavement markings. Also, unless one days operation completes the entire length of such combined zones, care must be taken to place DO NOT PASS and PASS WITH CARE signs in order to sign the beginning and end of the no-passing zones in the area where the surfacing operation has stopped for the day.

R4-1 and R4-2 signs should be mounted on fixed supports as detailed on BC Standards. These signs are to remain in place until standard pavement markings are placed.

"NO CENTER STRIPE" SIGN (CW21-15)

At the time construction activity obliterates the existing centerline (low volume roads may not have an existing centerline), a NO CENTER STRIPE sign (CW8-12) should be erected at each end of the work area and just beyond major rural intersections and other location deemed necessary by the Engineer. Where possible, the signs erected at each end of the work area should be located in such a manner that drivers can read the sign and immediately see the change to no centerline. The NO CENTER STRIPE sign should be supplemented with the NEXT XX MILES sign (CW21-16) mounted below it.

The NO CENTER STRIPE sign should be erected as detailed on BC Standards. These signs are to remain in place until standard pavement markings are placed.

"LOOSE GRAVEL" SIGN (ECW8-7)

When construction begins, a LOOSE GRAVEL sign (ECW8-7) should be erected at each end of the work area and repeated at intervals of approximately two (2) miles in rural areas and closer in urban areas. The LOOSE GRAVEL sign should be supplemented with the NEXT XX MILES sign (CW21-16) mounted below it.

The LOOSE GRAVEL sign should be erected as detailed on BC Standards. They should remain in place until the loose gravel condition no longer exists.

PAVEMENT MARKINGS

Short term pavement markings for surfacing projects shall use Temporary Flexible-reflective Roadway Marker Tabs. Tabs are to be installed to provide true alignment for striping crews or as directed by the Engineer. Tabs will be placed at the spacing indicated. Tabs should be applied to the pavement no more than two (2) days before the surfacing is applied. After the surfacing is rolled and swept the cover over the reflective strip shall be removed. Tabs shall NOT be used to simulate edge lines.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

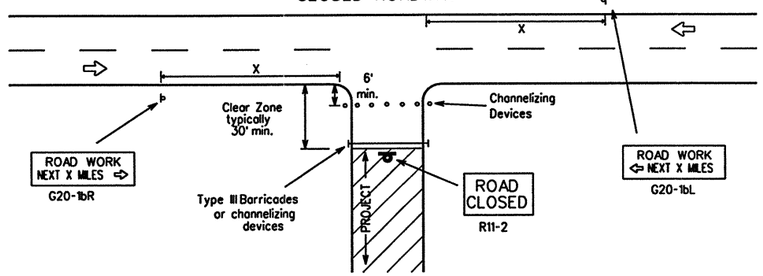
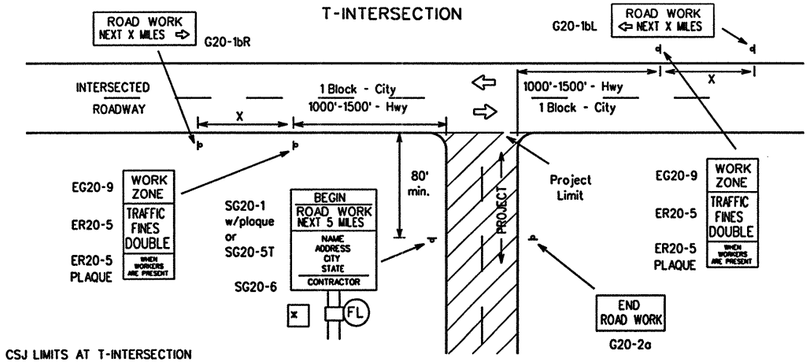
CLOSED ROADWAY



Barricades or channelizing devices shall be erected completely across roadway. Drums, vertical panels or cones shall be used in place of Type III Barricades when shown in plans or as specified by the Engineer.

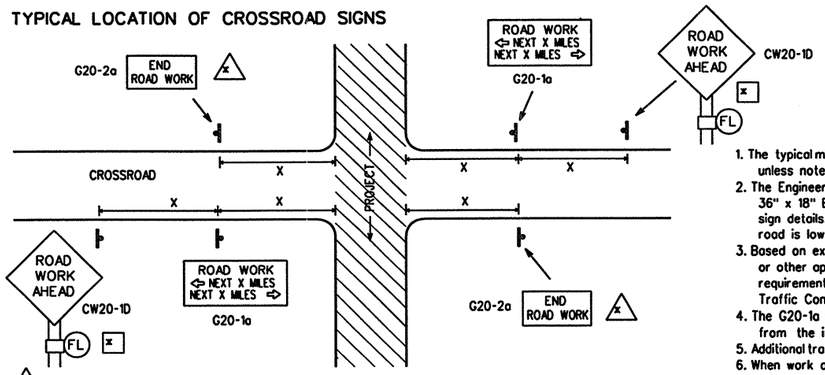
T-INTERSECTION



CSJ LIMITS AT T-INTERSECTION

1. A ROAD WORK NEXT X MILES (G20-1bR(L)) sign should be erected on the intersected highway as shown above.
2. The Engineer will determine the types and location of any additional traffic control devices, such as a flagger and accompanying signs, or other signs, that should be used when work is being performed at or near an intersection.
3. The Engineer/Inspector shall ensure that construction work zone signs are installed with adequate spacing between the signs so the legibility of existing permanent and other work zone signs is not obstructed.

TYPICAL LOCATION OF CROSSROAD SIGNS



May be mounted on back of CW20-1D sign with approval of engineer. (See note 2 at right)

1. The typical minimum signing on a crossroad approach should be a CW20-1D ROAD WORK AHEAD sign and a G20-2a END ROAD WORK sign, unless noted otherwise in plans.
2. The Engineer may use the reduced size 36" x 36" ROAD WORK AHEAD (MCW20-1D) sign mounted back to back with the reduced size 36" x 18" END ROAD WORK (SG20-2a) sign on low volume crossroads. See the "Standard Highway Sign Designs for Texas" manual for sign details. The Engineer may omit the advance warning signs on low volume crossroads. The Engineer will determine whether a rood is low volume. This information shall be shown in the plans.
3. Based on existing field conditions, the Engineer/Inspector may require additional signs such as FLAGGER AHEAD, LOOSE GRAVEL, or other appropriate signs. When additional signs are required, these signs will be considered part of the minimum requirements. The Engineer/Inspector will determine the proper location and spacing of any sign not shown on the BC sheets, Traffic Control Plan sheets or the Work Zone Standard Sheets.
4. The G20-1a sign shall be required on major crossroads to advise motorists of the length of construction in either direction from the intersection. The Engineer will determine whether a roadway is considered high volume.
5. Additional traffic control devices may be shown elsewhere in the plans for higher volume crossroads.
6. When work occurs in the intersection area, appropriate traffic control devices, as shown elsewhere in the plans or as determined by the Engineer/Inspector, shall be in place.

TYPICAL CONSTRUCTION WARNING SIGN SIZE AND SPACING

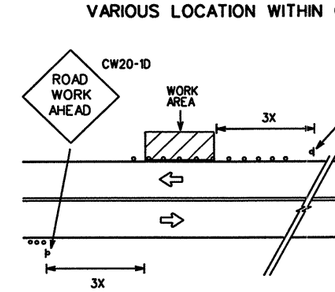
x For typical sign spacings on expressways and freeways, see Part VI of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) typical application diagrams or TCP Standard Sheets.

△ Minimum distance from work area to first Advance Warning sign and/or distance between each additional sign.

General Notes:
1. Special or larger size signs may be used as necessary.
2. Distance between signs should be increased as required to have 1500 feet advance warning.
3. Distance between signs should be increased as required to have ½ mile or more advance warning.
4. For use only on secondary roods or city streets where speeds are low.
5. Only diamond shaped warning sign sizes are indicated.
6. See sign size listing in "TMUTCD", Appendix A or the "Standard Highway Sign Design" manual for complete list of available sign design sizes.
7. Where two sizes are listed, see sign size listing in "TMUTCD", Appendix A or the "Standard Highway Sign Design" manual for proper size.

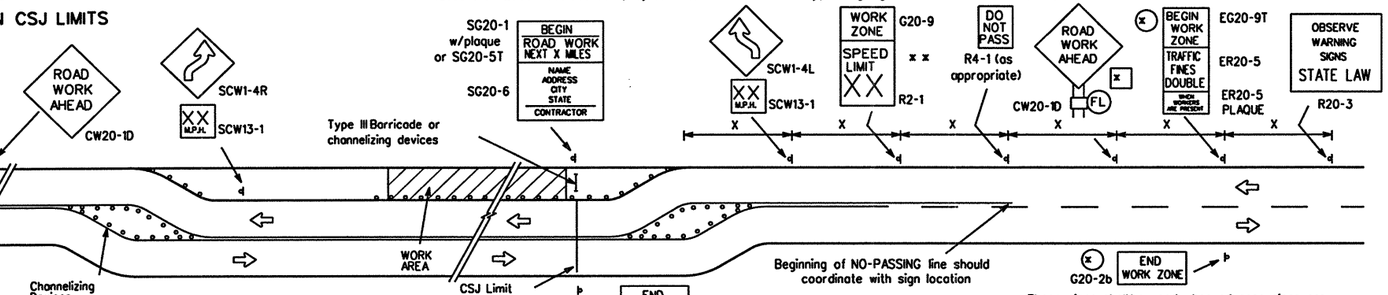
TYPICAL DETAILS FOR WORK AREAS IN VARIOUS LOCATION WITHIN CSJ LIMITS



When extended distances occur between minimal work areas, the Engineer/Inspector should ensure additional Rood Work Ahead (CW20-1D) signs are placed in advance of these work areas to remind drivers they are still within the project limits. See the applicable TCP sheets for exact location and spacing of signs and channelizing devices.

TYPICAL SIGNING AND TRAFFIC CONTROL DEVICE DETAILS FOR WORK BEGINNING AT THE CSJ LIMITS

(Less than 2000 feet between project limits and work area) (Typical signing shall be installed at all CSJ Limits)

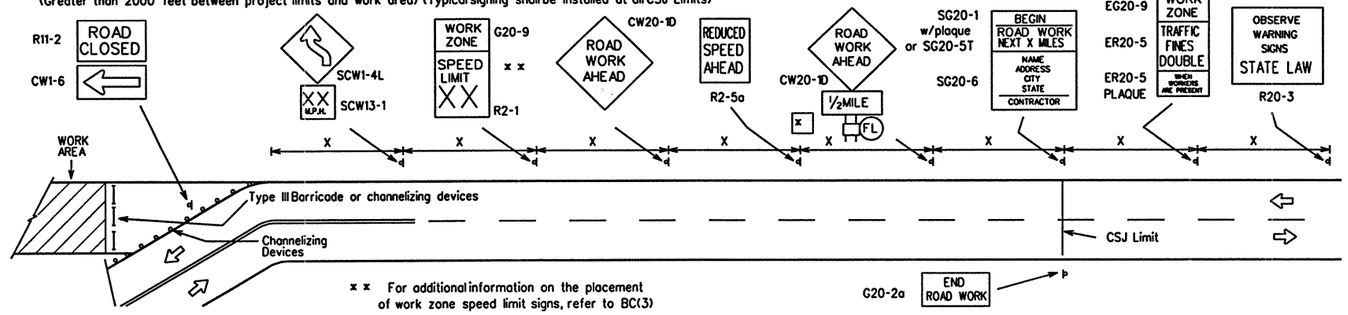


x x For additional information on the placement of work zone speed limit signs, refer to BC(3)

(x) These signs shall be used when advance signs are required outside the CSJ Limits. They inform the motorist of entering or leaving a work zone where traffic fines may double if workers are present.

TYPICAL DETAIL FOR PROJECT LIMIT AWAY FROM WORK AREA

(Greater than 2000 feet between project limits and work area) (Typical signing shall be installed at all CSJ Limits)



x x For additional information on the placement of work zone speed limit signs, refer to BC(3)

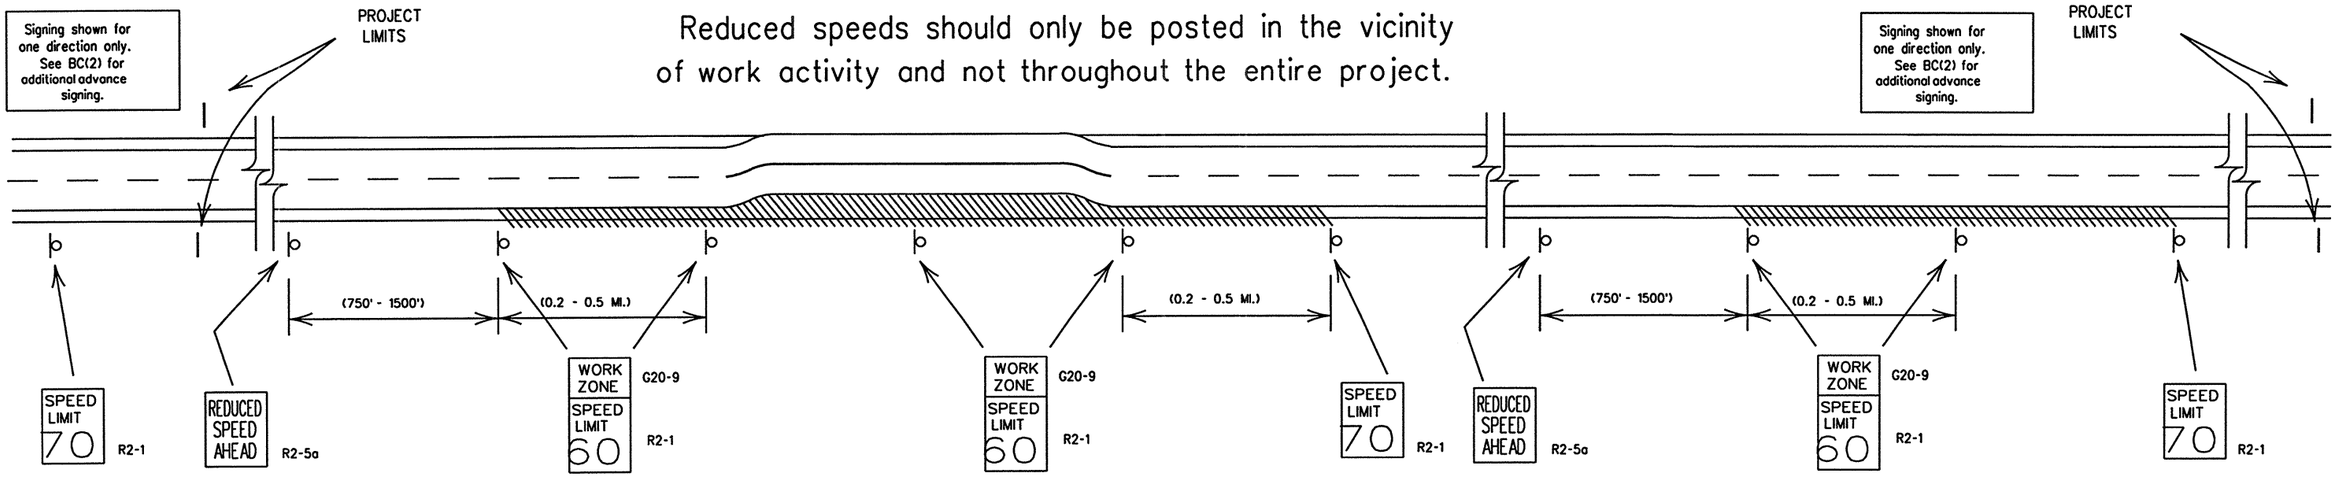
HOUFILE023 \HCIVIL\CF0130 04/18/03
B50TXP06.DGN

TYPICAL APPLICATION OF WORK ZONE SPEED LIMIT SIGNS

Work zone speed limits shall be regulatory, established in accordance with the "Procedures for Establishing Speed Zones," and approved by the Texas Transportation Commission.

Reduced speeds should only be posted in the vicinity of work activity and not throughout the entire project.



GUIDANCE FOR USE:

LONG/INTERMEDIATE TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit should be included on the design of the traffic control plans when restricted geometrics with a lower design speed are present in the work zone and modification of the geometrics to a higher design speed is not feasible.

LONG/INTERMEDIATE TERM WORK ZONE SPEED LIMIT signs should be posted and visible to the motorists at all times. Work activity in the area of reduced speed zone should be greater than 12 consecutive hours per day. Work activity may also be defined as a change in the roadway that requires a reduced speed for motorists to safely negotiate the work area, including:

a) rough road or damaged pavement surface
b) substantial alteration of roadway geometrics (diversions)
c) construction detours
d) grade
e) width
f) other conditions readily apparent to the driver

As long as any of these conditions exist, the work zone speed limit signs should remain in place.

SHORT TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit should be included on the design of the traffic control plans when workers or equipment are not behind concrete barrier, work activity is within 15 feet of pavement edge or actually on the pavement.

SHORT TERM WORK ZONE SPEED LIMIT signs should be posted and visible to the motorists only when work activity is present. Work activity in the area of reduced speed should be less than 12 consecutive hours. When work activity is not present, signs should be covered with an approved sign cover or removed from work area.

GENERAL NOTES:

1. Regulatory work zone speed limits should be used only for sections of construction projects where speed control is of major importance. Regulatory work zone speed signs (R2-1) should be removed during periods when they are not needed to minimize interference with traffic.
2. Regulatory work zone speed limit signs shall be placed on supports at a 7 foot mounting height.
3. Speed zone signs are illustrated for one direction of travel and are normally posted for each direction of travel.
4. Frequency of speed limit signs should be:
   40 mph and greater 0.2 to 2 miles
   35 mph and less 0.2 to 1 mile
5. Regulatory speed limit signs shall have black legend and border on a white reflective background.
6. Fabrication, errection and maintenance of REDUCED SPEED AHEAD sign, WORK ZONE plaque and SPEED LIMIT signs shall not be paid for directly, but shall be considered subsidiary to Item 502.
7. Turning signs from view, laying signs over or down will not be allowed, unless otherwise noted.
8. Techniques that may help reduce traffic speeds. (In order of effectiveness.)
   A. Flagger stationed next to sign.
   B. Law enforcement.
   C. Portable changeable message sign (PCMS).
   D. Low-power radar transmitter.
9. Refer to "Work Zone Speed Limit Work Sheets 1 and 2" to determine when a construction speed zone should be required.

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

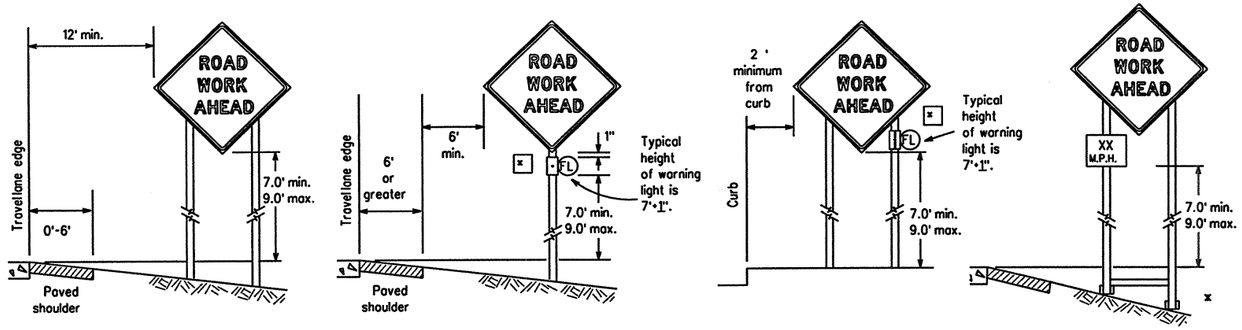
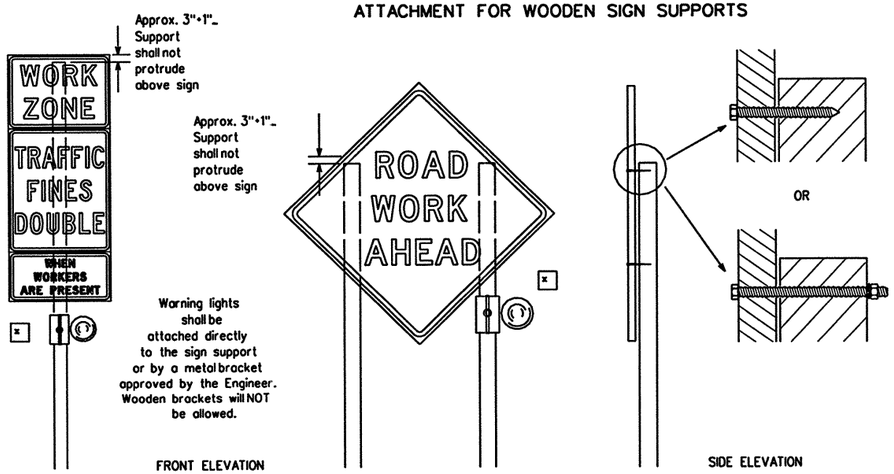
TYPICAL MINIMUM CLEARANCES FOR LONG TERM AND INTERMEDIATE TERM SIGNS



It is the intent of these plans to provide positive guidance to motorists throughout the project limits by the use of signs, pavement markings, delineation and/or channelizing devices. All traffic control devices shall conform with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD) and the "Compliant Work Zone Traffic Control Devices List" list (CWZTCD).

x When placing skid supports on unlevel ground, the leg post lengths must be adjusted so the sign appears straight and plumb. Objects shall NOT be placed under skids as a means of leveling.

ATTACHMENT FOR WOODEN SIGN SUPPORTS



Attachment to wooden supports will be by bolts and nuts or screws. Use TxDOT's or manufacturer's recommended procedures for attaching sign substrates to other types of sign supports

Nails will NOT be allowed.

Each sign shall be attached directly to the sign support. Multiple signs shall not be joined or spliced by any means. Supports shall not be extended or repaired by splicing or other means.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

Standards Engineer
Traffic Operations Division - TE
Texas Department of Transportation
125 East 11th Street
Austin, Texas 78701-2483
Phone (512) 416-3120
Fax (512) 416-3299

This site is printable.

(FL) Flashing Type A - Low Intensity Warning Light

x The Type A Warning lights shall not be used with Type E Sheeting (Fluorescent Prismatic) meeting the requirements of DMS-8300.

CONTRACTOR REQUIREMENTS FOR MAINTAINING PERMANENT SIGNS WITHIN THE PROJECT LIMITS

1. Permanent signs are used to give notice of traffic laws or regulations, call attention to conditions that are potentially hazardous to traffic operations, show route designations, destinations, directions, distances, services, points of interest, and other geographical, recreational, or cultural information. Drivers proceeding through a work zone need the same, if not better route guidance as normally installed on a roadway without construction.
2. When permanent regulatory or warning signs conflict with work zone conditions, remove or cover the permanent signs until the permanent sign message matches the roadway condition.
3. When existing permanent signs are moved and relocated due to construction purposes, they shall be visible to motorists at all times.
4. If existing signs are to be relocated on their original supports, they shall be installed on crashworthy bases as shown on the SMD Standard sheets. The signs shall meet the required mounting heights shown on the BC Sheets or the SMD Standards. This work should be paid for under the appropriate pay item for relocating existing signs.
5. If permanent signs are to be removed and relocated using temporary supports, the Contractor shall use crashworthy supports as shown on the BC sheets or the CWZTCD. The signs shall meet the required mounting heights shown on the BC Sheets or the SMD Standards during construction. This work should be paid for under the appropriate pay item for relocating existing signs.
6. Any sign or traffic control device that is struck or damaged by the Contractor or his/her construction equipment shall be replaced as soon as possible by the Contractor to ensure proper guidance for the motorists. This will be subsidiary to Item 502.

GENERAL NOTES FOR WORK ZONE SIGNS

1. Contractor shall install and maintain signs in a straight and plumb condition and/or as directed by the Engineer.
2. Wooden sign posts shall be painted white.
3. Barricades shall NOT be used as sign supports.
4. Nails shall NOT be used to attach signs to any support.
5. All signs shall be installed in accordance with the plans or as directed by the Engineer. Signs shall be used to regulate, warn, and guide the traveling public safely through the work zone.
6. The Contractor may furnish either the sign design shown in the plans or in the "Standard Highway Sign Designs for Texas" (SHSD). The Engineer/Inspector may require the Contractor to furnish other work zone signs that are shown in the TMUTCD but may have been omitted from the plans. Any variation in the plans shall be documented by written agreement between the Engineer and the Contractor's Responsible Person. All changes must be documented in writing before being implemented. This can include documenting the changes in the Inspector's TxDOT diary and having both the Inspector and Contractor initial and date the agreed upon changes. The additional signs requested by the Engineer/Inspector shall not be subsidiary.
7. The Contractor shall furnish sign supports listed in the "Compliant Work Zone Traffic Control Device List" (CWZTCD). The Contractor shall install the sign support in accordance with the manufacturer's recommendations. If there is a question regarding installation procedures, the Contractor shall furnish the Engineer a copy of the manufacturer's installation recommendations so that the Engineer can verify the correct procedures are being followed.
8. The contractor is responsible for sign installations and replacing signs with damaged or cracked substrates and/or damaged or marred reflective sheeting as directed by the Engineer/Inspector.
9. Identification markings may be shown only on the back of the sign substrate. The maximum height of letters and/or company logos used for identification shall be 1".
10. The Contractor shall replace damaged wood posts. New or damaged wood sign posts shall not be spliced.

Duration of Work (as defined by the "Texas Manual on Uniform Traffic Control Devices" Part VI)

1. The types of sign supports, the size of signs, and the type of sign substrates can vary based on the type of work being performed. The Engineer is responsible for selecting the appropriate size sign for the type of work being performed. The Contractor is responsible for ensuring that the sign support and substrate meets crashworthiness and length of work requirements.
   a. Long-term stationary - work that occupies a location more than 3 days.
   b. Intermediate-term stationary - work that occupies a location from overnight to 3 days.
   c. Short-term stationary - daytime work that occupies a location from 1 to 12 hours.
   d. Short, duration - work that occupies a location up to 1 hour.
   e. Mobile - work that moves intermittently or continuously. Does not stop for more than 15 minutes at a time.

SIGN MOUNTING HEIGHT

1. The bottom of Long-term/Intermediate-term signs shall be at least 7 feet, but not more than 9 feet, above the paved surface.
2. The bottom of Short-term/Short Duration signs shall be a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground.
3. Long-term/Intermediate-term Signs may be used in lieu of Short-term/Short Duration signing.
4. Short-term/Short Duration signs shall be used only during daylight and shall be removed at the end of the workday.
5. Regulatory signs shall be mounted at least 7 feet, but not more than 9.0 feet, above the paved surface regardless of work duration.

SIZE OF SIGNS

1. The Engineer may allow the use of smaller size construction warning signs on secondary roads or city streets where speeds are low if the sign size is listed as an option on the "Typical Construction Warning Sign Size and Spacing" chart shown on BC(2).
2. The Contractor shall furnish the sign sizes shown in plans, the BC Sheets, the TCP sheets or as directed by the Engineer.

SIGN SUBSTRATES

1. The Contractor shall ensure that the sign substrate is allowed for the type of sign support that is being used. The CWZTCD lists each substrate that can be used on the different types and models of sign supports.
2. "Mesh" type materials are NOT an approved sign substrate.
3. All wooden individual sign panels fabricated from 2 or more pieces shall have one or more plywood cleat, 1/2" thick by 6" wide, fastened to the back of the sign and extending fully across the sign. The cleat shall be attached to the back of the sign using wood screws that do not penetrate the face of the sign panel. The screws shall be placed on both sides of the splice and spaced at 6" centers. The Engineer may approve other methods of splicing the sign faces.

REFLECTIVE SHEETING

1. Reflectorized signs shall be constructed of sheeting meeting the color and retro-reflectivity requirements of DMS-8300 or DMS-8310. The DMS specifications can be accessed from the following web address: http://manuals.dot.state.tx.us:80/dynaweb/colmates/dms/@Generic_BookView
2. White sheeting, meeting the requirements of DMS-8300 Type C (High Specific Intensity), shall be used for signs with white background and channelizing devices.
3. Orange sheeting, meeting the requirements of DMS-8300 Type E (Fluorescent Prismatic), shall be used for signs with orange backgrounds.

SIGN LETTERS

1. All sign letters and numbers shall be clear, and open rounded type uppercase alphabet letters as approved by the Federal Highway Administration (FHWA) and as published in the "Standard Highway Sign Design for Texas" manual. Signs, letters and numbers shall be of first class workmanship in accordance with Department Standards and Specifications.

REMOVING OR COVERING

1. When sign messages may be confusing or do not apply, the signs shall be removed or completely covered.
2. Long-term stationary or intermediate stationary signs installed on square metal tubing may be turned away from traffic 90 degrees when the sign message is not applicable. This type of sign support meets the crashworthiness standards regardless of the direction of impact. This technique may not be used for signs installed in the median of divided highways or near any intersections where the sign may be seen from approaching traffic.
3. Signs installed on skids shall not be turned at 90 degree angles to the roadway. These signs should be removed or completely covered when not required.
4. When signs are covered, the material used shall be opaque, such as heavy mil black plastic.
5. Burlap shall NOT be used to cover signs.
6. Duct tape or other adhesive material shall NOT be affixed to a sign face. These materials can damage the retroreflectivity of sign sheeting.
7. Signs shall be removed upon completion of the work.

SIGN SUPPORT WEIGHTS

1. Where sign supports require the use of weights to keep from turning over, the use of sandbags with dry, cohesionless sand is recommended.
2. The sandbags will be tied shut to keep the sand from spilling and to maintain a constant weight.
3. Rock, concrete, iron, steel or other solid objects will not be permitted for use as sign support weights.
4. Sandbags should weigh a minimum of 35 lbs and a maximum of 50 lbs.
5. Sandbags shall be made of a durable material that tears upon vehicular impact.
6. Rubber (such as tire inner tubes) shall NOT be used for sandbags.
7. Rubber ballasts (such as those used with cones or edgeline channelizers) shall NOT be used as sign support weights.
8. Sandbags shall only be placed along or laid over the base supports of the traffic control device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners. Sandbags shall be placed along the length of the skids to weigh down the sign support.
9. Sandbags shall NOT be placed under the skid and shall not be used to level sign supports placed on slopes.

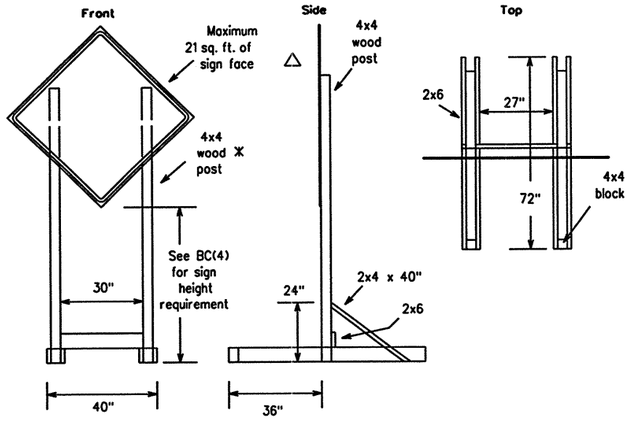
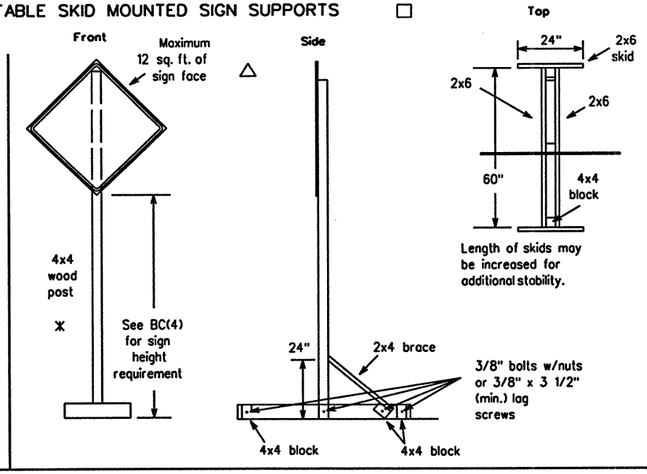
ACC:

EXAMPLES OF SKID MOUNTED SIGN SUPPORTS

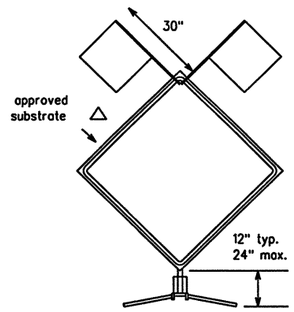
LONG/INTERMEDIATE TERM STATIONARY - PORTABLE SKID MOUNTED SIGN SUPPORTS □



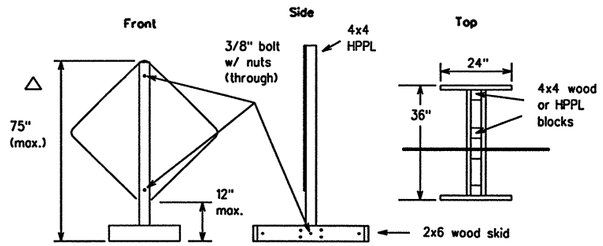


SHORT TERM STATIONARY/SHORT DURATION - PORTABLE SIGN SUPPORTS □

For Daytime use only.
1 Foot Mounting Height

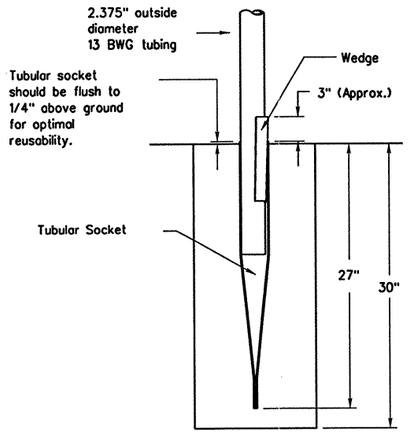


Flags as required by Engineer or as shown on plans



The upright SHALL be made of hollow-profile plastic lumber (HPPL). Wood or metal shall NOT be used.

EXAMPLES OF GROUND MOUNTED SIGN SUPPORTS



WEDGE ANCHOR SYSTEM WITH THIN-WALL TUBE

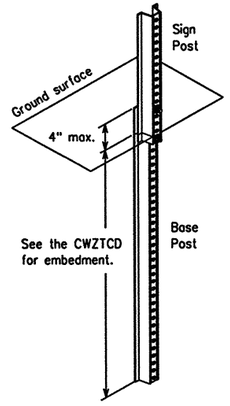
The wedge anchor system with thin wall tubing may be used to support up to 10 sq. ft. of sign area.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 18 inches. When solid rock is encountered below ground level, the foundation shall extend in the solid rock a minimum depth of 18 inches or provide a minimum foundation depth of 30 inches. If solid rock is encountered, the socket/stub may be reduced in length as required to a min. length of 18 inches. Any material removed from the socket/stub shall be from the bottom and the clearance requirements shown above must still be adhered to. The inner surfaces of the socket/stub must remain free of debris.
Install Wedge Anchor System per manufacturer recommendations.
Attach the sign to the sign post.
Insert the sign post into the socket and align the sign face with the roadway.
Drive the wedge into the socket to secure post. This will leave approximately 3 inches of the wedge exposed.

Supports shall be straight within 1/4 inch per 5 feet of length and shall have a smooth, uniform finish free from defects affecting strength or appearance. Any bolt holes and sheared ends shall be free from burrs.

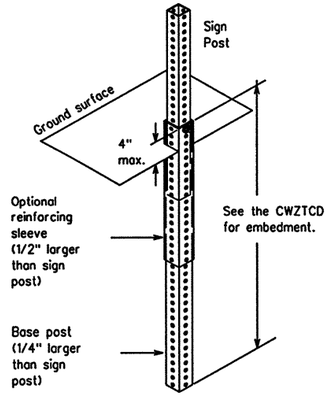
WING CHANNEL

Lap-splice/base bolted anchor

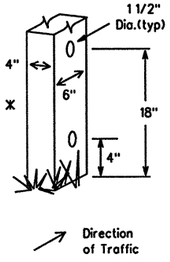


PERFORATED SQUARE METAL TUBING

With Anchor



Refer to the CWZTCD and the manufacturer's installation procedure for each type sign support.
The maximum sign square footage shall adhere to the manufacturer's recommendation. Two post installations can be used for larger signs.



WOOD POST SYSTEM FOR GROUND MOUNTED SIGN SUPPORTS

Nominal Post Size	No. of Posts	Maximum Sq. feet of Sign Face	Minimum Soil Embedment	Drilled Hole(s) Required
4 x 4	1	12	36"	NO
4 x 4	2	21	36"	NO
4 x 6	1	21	36"	YES
4 x 6	2	36	36"	YES

No more than 2 sign posts shall be mounted within a 7 ft. circle.

When project is completed, all sign supports and foundations shall be removed from the project site. This will be considered subsidiary to Item 502.

□ See BC(4) for definition of "Work Duration."

* Sign posts MUST be one piece. Splicing will NOT be allowed. Posts shall be painted white.

△ See the CWZTCD for the type of sign substrate that can be used for each approved sign support.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

PORTABLE CHANGEABLE MESSAGE SIGNS

1. The Engineer/Inspector shall approve all messages used on portable changeable message signs (PCMS).
2. PCMS placed on the shoulder or within the R-O-W, but are not behind a concrete traffic barrier shall have a minimum of four plastic drums placed perpendicular to traffic, on the upstream side of the PCMS.
3. Messages on PCMS should contain no more than 8 words (four to eight characters per word), not including simple words such as "TO," "FOR," "AT," etc.
4. Messages should consist of a single phase, or two phases that alternate. Three-phase messages are not allowed.
5. Each phase of the message should convey a single thought.
6. Use the word "EXIT" to refer to an exit ramp on a freeway; i.e., "EXIT CLOSED." Do not use the term "RAMP."
7. Always use the route or interstate designation (IH, US, SH, FM) along with the number when referring to a roadway.
8. Specify the actual days of the week; e.g., TUES THROUGH FRI or TUES-FRI in the coming week that work activity will occur.
9. The message term "WEEKEND" should be used only if the work is to start on Saturday morning and end by Sunday evening at midnight. Actual days and hours of work should be displayed on the PCMS if work is to begin on Friday evening and/or continue into Monday morning.
10. The Engineer/Inspector may select one of two options which are available for displaying a two-phase message on a PCMS. Each phase may be displayed for either four seconds each or for two seconds each.
11. Do not "flash" messages or words included in a message. The message should be steady burn or continuous while displayed.
12. Do not present redundant information on a two-phase message; i.e., keeping two lines of the message the same and changing the third line.
13. Do not use the words "Danger" or "Caution" in message.
14. Do not display the message "LANES SHIFT LEFT" or "LANES SHIFT RIGHT" on a PCMS. Drivers do not understand the message.
15. Do not display messages that scroll horizontally or vertically across the face of the sign.
16. The following table lists abbreviated words and two-word phrases that are acceptable for use on a PCMS. Both words in a phrase must be displayed together. Words or phrases not on this list should not be abbreviated.

Word or Phrase	Abbreviation	Word or Phrase	Abbreviation
Access Road	ACCES RD	Miles	MI

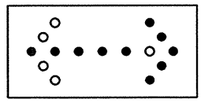
Maintenance	MAINT	Wet Pavement	WET PVMT
Roadway designation #	IH-number, US-number, SH-number, FM-number	West	W

WHEN NOT IN USE, REMOVE THE PCMS FROM THE RIGHT-OF-WAY OR PLACE THE PCMS BEHIND CONCRETE TRAFFIC BARRIER.

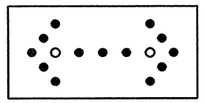
TYPICAL FLASHING ARROW PANEL

1. The Flashing Arrow Panel should be used for all lane closures on multi-lane roadways, or slow moving maintenance or construction activities on the travel lanes.
2. Flashing Arrow Panels should not be used on two-lane, two-way roadways, detours, diversions or work on shoulders unless the "CAUTION" display (see detail below) is used.
3. The Engineer/Inspector shall choose all appropriate signs, barricades and/or other traffic control devices that should be used in conjunction with the Flashing Arrow Panel.
4. The Flashing Arrow Panel should be able to display the following symbols:

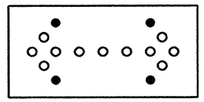
Flashing RIGHT (LEFT) ARROW



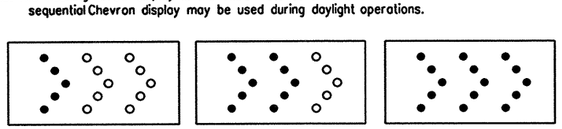
Flashing DOUBLE ARROW



Flashing CAUTION



5. The "CAUTION" display consists of four corner lamps flashing simultaneously.
6. The straight line caution display is NOT ALLOWED.
7. The Flashing Arrow Panel shall be capable of minimum 50 percent dimming from rated lamp voltage. The flashing rate of the lamps shall not be less than 25 nor more than 40 flashes per minute.
8. Minimum lamp "on time" shall be approximately 50 percent for the flashing arrow and equal intervals of 25 percent for each sequential phase of the flashing chevron.
9. The sequential arrow display is NOT ALLOWED.
10. The flashing arrow display is the TxDOT standard; however, the sequential Chevron display may be used during daylight operations.



11. The Flashing Arrow Panel shall be mounted on a vehicle, trailer or other suitable support.
12. A Flashing Arrow Panel SHOULD NOT BE USED to laterally shift all lanes of traffic on a multi-lane roadway at once.

REQUIREMENTS

TYPE	MINIMUM SIZE	MINIMUM NUMBER OF PANEL LAMPS	MINIMUM VISIBILITY DISTANCE
B	30 x 60	13	3/4 mile
C	48 x 96	15	1 mile

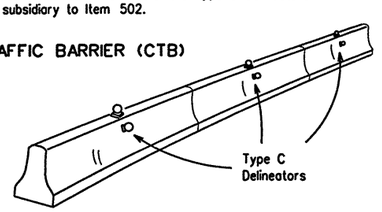
ATTENTION: Flashing Arrow Panels shall be equipped with automatic dimming devices.

WHEN NOT IN USE, REMOVE THE ARROW PANEL FROM THE RIGHT-OF-WAY OR PLACE THE ARROW PANEL BEHIND CONCRETE TRAFFIC BARRIER.

TYPE C DELINEATORS FOR CONCRETE TRAFFIC BARRIER AND ATTENUATORS

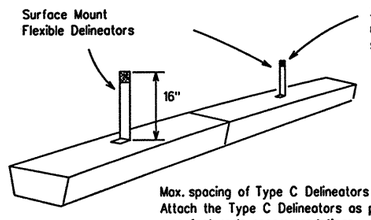
1. Type C Delineators shall be prequalified, and conform to the color and reflectivity requirements of DMS-8600. A list of prequalified Type C Delineators can be found at the following Web site: ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/dms8600preq.pdf.
2. Color of delineators shall be as specified in the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD). The cost of the Type C Delineators shall be considered subsidiary to Item 502.

CONCRETE TRAFFIC BARRIER (CTB)



3. Two (2) Type C Delineators should be mounted on each section of CTB in approximately the midsection of the CTB. The Type C Delineator on the side of the CTB shall be installed directly below the Type C Delineator mounted on top of the CTB.
4. Maximum spacing of Type C Delineators is 40 feet.
5. Pavement markers or temporary flexible-reflective roadway marker tabs shall NOT be used as CTB delineation.
6. Attach Type C Delineators on CTB as per manufacturer's recommendations.
7. Missing or damaged Type C Delineators shall be replaced as directed by the Engineer.

LOW PROFILE CONCRETE BARRIER (LPCB)



Max. spacing of Type C Delineators is 20 feet. Attach the Type C Delineators as per manufacturer's recommendations.

DELINEATION OF END TREATMENTS

	APPROACHING TRAFFIC	
	BOTH SIDES	ONE SIDE
DELINEATION	OM-1	OM-3 or Vertical Panel

Attach the Type C Delineators as per manufacturer's recommendations.

TRUCK-MOUNTED ATTENUATORS

1. Truck-mounted attenuators (TMA) used on TxDOT facilities must meet the requirements outlined in the National Cooperative Highway Research Report No. 350 (NCHRP 350).
2. Refer to the CWZTCD for the requirements of Level 2 or Level 3 TMAs.
3. Refer to the dates shown in the CWZTCD to ensure that the TMA meets the age requirements and the crashworthiness criteria established by the Federal Highway Administration (FHWA) for TMAs.
4. Refer to the CWZTCD for a list of approved TMAs.
5. TMAs are required on freeways unless otherwise noted in the plans.
6. A TMA should be used anytime that it can be positioned approximately 100 feet or less in advance of the area of crew exposure without adversely affecting the work performance.
7. The only reason a TMA should not be required is when a work area is spread down the roadway and the work crew is an extended distance from the TMA.

WARNING LIGHTS

1. Warning lights shall meet the requirements of the TMUTCD.
2. Warning lights shall NOT be installed on barricades.
3. Type A-Low Intensity Flashing Warning Lights are commonly used with signs. They are intended to warn of an approaching potentially hazardous area. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation " FL". The Type A Warning Lights shall not be used with signs manufactured with Type E Sheeting (Fluorescent Prismatic) meeting the requirements of Departmental Material Specification DMS-8300.
4. Type-C Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control devices. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation " SB ".
5. The Engineer/Inspector or the plans shall specify the location and type of warning lights to be installed on the traffic control devices.
6. When required by the Engineer, the Contractor shall furnish a copy of the warning lights certification. The warning light manufacturer will certify the warning lights meet the requirements of the latest ITE Purchase Specifications for Flashing and Steady-Burn Warning Lights.

END TREATMENTS FOR CTB'S USED IN WORK ZONES

End treatments used on CTB's in work zones shall meet crashworthy standards as defined in the National Cooperative Highway Research Report 350. Refer to the CWZTCD List for approved end treatments and manufacturers.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

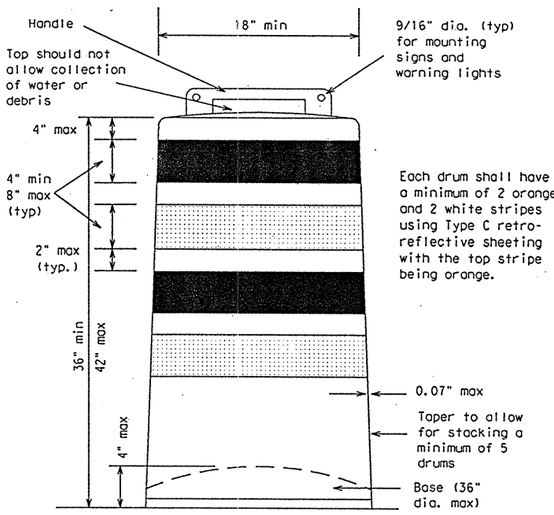
DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.



GENERAL NOTES

1. Drums and all related items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) and the "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
2. Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects that would adversely affect their appearance or serviceability.
3. The Contractor shall have a maximum of 24 hours to replace any plastic drums or other traffic control devices identified for replacement by the Engineer/Inspector. The replacement device must be an approved device.

Prequalified plastic drums shall meet the following requirements:

GENERAL DESIGN REQUIREMENTS

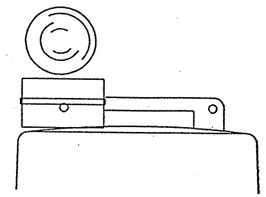
1. Plastic drums shall be a two-piece design; the "body" of the drum shall be the top portion and the "base" shall be the bottom.
2. The body and base shall lock together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 20 MPH or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles.
3. Plastic drums shall be constructed of lightweight flexible, and deformable materials. The Contractor shall NOT use metal drums or single piece plastic drums as channelization devices or sign supports.
4. Drums shall present a profile that is a minimum of 18 inches in width at the 36 inch height when viewed from any direction. The height of drum unit (body installed on base) shall be a minimum of 36 inches and a maximum of 42 inches.
5. The top of the drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two widely spaced 9/16 inch diameter holes to allow attachment of a warning light, delineator reflector unit or non-plywood sign.
6. The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 4 inches nor greater than 8 inches in width. Any non-reflectorized space between any two adjacent stripes shall not exceed 2 inches in width.
7. Bases shall have a maximum width of 36 inches, a maximum height of 4 inches, and a minimum of two footholds of sufficient size to allow base to be held down while separating the drum body from the base.
8. Plastic drums shall be constructed of ultra-violet stabilized, orange, high-density polyethylene (HDPE) or other approved material.
9. Drum body shall have a minimum unballasted weight of 7.7 lbs. and maximum unballasted weight of 11 lbs. The wall of the drum body shall be a minimum of 0.07 inch in thickness. Weight of any drum supplied shall not vary more than 0.5 lb. from that of the prequalified sample.
10. Drum and base shall be marked with manufacturer's name and model number.

RETROREFLECTIVE SHEETING

1. The stripes used on drums shall be constructed of sheeting meeting the color and retroreflectivity requirements of Departmental Materials Specification DMS-8300, "Flat Surface Reflective Sheeting." High Specific Intensity (Type C) retro-reflective sheeting shall be supplied unless otherwise specified in the plans.
2. The sheeting shall be suitable for use on and shall adhere to the drum surface such that, upon vehicular impact, the sheeting shall remain adhered in-place and exhibit no delaminating, checking, cracking, or loss of retroreflectivity other than that loss due to abrasion of the sheeting surface.

BALLAST

1. Unballasted bases shall be large enough to hold up to 50 lbs. of sand. This base, when filled with the ballast material, should weigh between 35 lbs (minimum) and 50 lbs (maximum). The ballast may be sand in one to three sandbags separate from the base, sand in a sand-filled plastic base, or other ballasting devices as approved by the Engineer. Stacking of sandbags will be allowed, however height of sandbags above pavement surface may not exceed 12 inches.
2. Bases with built-in ballast shall weigh between 40 lbs. and 50 lbs. Built-in ballast can be constructed of an integral crumb rubber base or a solid rubber base.
3. The ballast shall not be heavy objects, water, or any material that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle.
4. When used in regions susceptible to freezing, drums shall have drainage holes in the bottoms so that water will not collect and freeze becoming a hazard when struck by a vehicle.
5. Ballast shall not be placed on top of drums.
6. Adhesives may be used to secure base of drums to pavement.

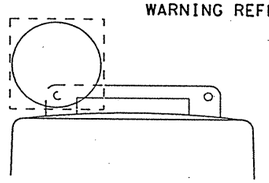


Type C Warning Light or approved substitute mounted adjacent to the travel way.

WARNING LIGHTS AND DELINEATORS MOUNTED ON PLASTIC DRUMS

1. Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area.
2. Type A flashing warning lights are not intended for delineation and shall not be used in a series.
3. Type C steady-burn warning lights are intended to be used in a series to delineate the edge of the travel lane on detours, on lane changes, on lane closures, and on other similar conditions.
4. Type A and Type C warning lights shall be installed at locations as detailed on other sheets in the plans.
5. Warning lights shall not be installed on a drum that has a sign, chevron or vertical panel.
6. Type A Class 1, Type A Class 2, or Type B Reflector Units (D & OM Standard) may be attached to drums to delineate the intended vehicular path. The color of the reflector unit shall correspond to the pavement marking it is supplementing or for which it is substituting (left edgeline-yellow or right edgeline-white). The reflective unit shall be attached to the handle of the drum using the mounting hole nearest the travel lane and shall be aligned perpendicular to approaching traffic.
7. Delineators may be used as directed by the Engineer. Delineators may not be used as a substitute for warning lights.

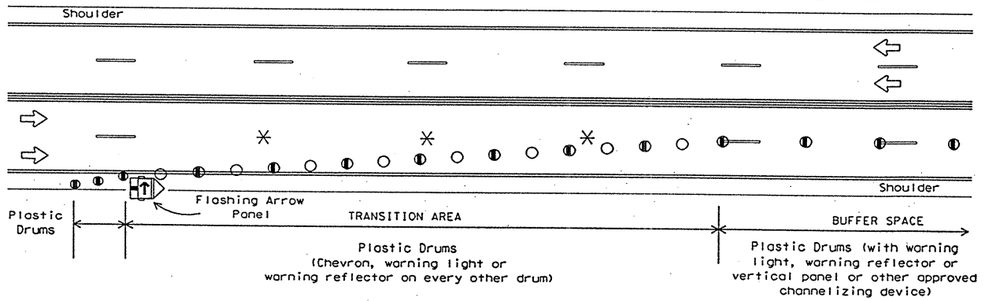
WARNING REFLECTORS MOUNTED ON PLASTIC DRUMS AS A SUBSTITUTE FOR TYPE C WARNING LIGHTS



Warning reflector may be round or square. Must have a reflective surface area of at least 30 square inches

1. A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C, steady burn warning light at the discretion of the Contractor unless otherwise noted in the plans.
2. The warning reflector shall be manufactured using a sign substrate approved for use with plastic drums listed on the CWZTCD.
3. The warning reflector shall have a minimum retroreflective surface area (one-side) of 30 square inches.
4. Round reflectors shall be fully reflectorized, including the area where attached to the drum.
5. Square substrates must have a minimum of 30 square inches of reflectorized sheeting. They do not have to be reflectorized where it attaches to the drum.
6. The side of the warning reflector facing approaching traffic shall have sheeting meeting the color and retroreflectivity requirements for DMS 8300-Type D (Non-fluorescent Prismatic).
7. When used near two-way traffic, both sides of the warning reflector shall be reflectorized.
8. The warning reflector should be mounted on the side of the handle nearest approaching traffic.

TYPICAL DETAIL OF LANE CLOSURE USING PLASTIC DRUMS AS CHANNELIZING DEVICES

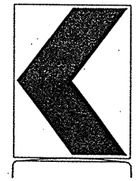


LEGEND

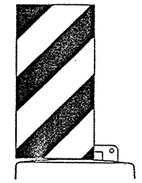
- Flashing Arrow Panel
- Plastic Drum
- Plastic Drum w/ approved channelizing device

Provide adequate sight distance when placing lane closures. Do not place lane closures in vertical or horizontal curves.
See BC(8) for table showing the spacing of channelizing devices in the taper and tangent section.

* NOTE: Lane lines shall be removed when the lane closure occupies a location for longer than 2 weeks.



18" x 24" Sign
(Maximum Sign Dimension)
Chevron CW1-8, Driveway sign D70a, Keep Right R4 series or other signs as approved by Engineer



12" x 24"
Vertical Panel
mount with diagonals sloping down towards travel way

Plywood, Aluminum or Metal sign substrates shall NOT be used on plastic drums

SIGNS, CHEVRONS, AND VERTICAL PANELS MOUNTED ON PLASTIC DRUMS

1. Signs used on plastic drums shall be manufactured using substrates listed on the CWZTCD.
2. Chevrons and other work zone signs with an orange background shall be manufactured with Type E (Fluorescent Prismatic) sheeting meeting the color and retroreflectivity requirements of DMS-8300, "Flat Surface Reflective Sheeting," unless otherwise specified in the plans.
3. Vertical Panels shall be manufactured with orange and white sheeting meeting the requirements of DMS-8300 Type C (High Specific Intensity). Diagonal stripes on Vertical Panels shall slope down toward the intended traveled lane.
4. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 18 inches in width or 24 inches in height.
5. Signs shall be installed using a 1/2 inch bolt (nominal) and nut, two washers, and one locking washer for each connection.
6. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than 1/2 inch beyond nuts.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

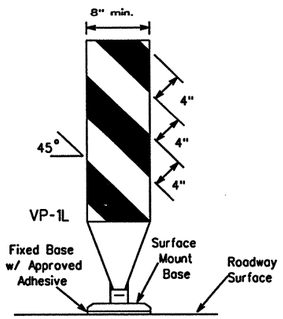
ACC:

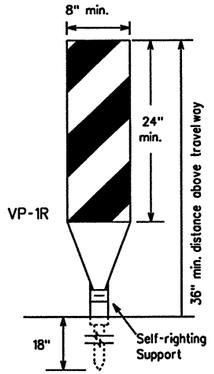
CHANNELIZING DEVICES

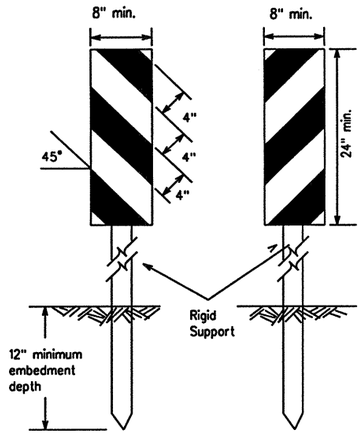
VERTICAL PANELS



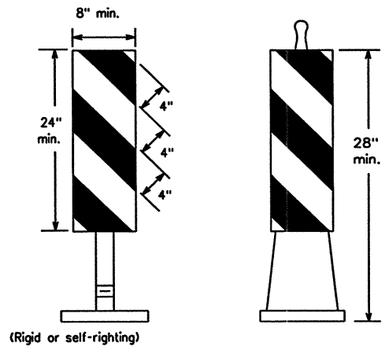
FIXED

(Rigid or self-righting)





DRIVEABLE

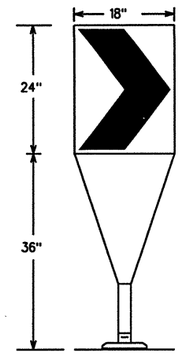


(Rigid or self-righting)

PORTABLE

1. Vertical Panels (VP's) are normally used to channelize traffic or divide opposing lanes of traffic.
2. VP's may be used in daytime or nighttime situations. They may be used at the edge of shoulder drop-offs and other areas such as lane transitions where positive daytime and nighttime delineation is required. The Engineer/Inspector shall refer to the Roadway Design Manual Appendix B "Treatment of Pavement Drop-offs in Work Zones" for additional guidelines on the use of VP's for drop-offs.
3. VP's should be mounted back to back if used at the edge of cuts adjacent to two-way two lane roadways. Stripes are to be reflective orange and reflective white and should always slope downward toward the travel lane.
4. VP's used on expressways, freeways, and on high speed roadways shall have a minimum of 2 square feet of retroreflective area facing traffic.
5. Self-righting supports are available with portable base. See "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
6. Sheeting for the VP's shall be retroreflective Type C (High Specific Intensity) conforming to Departmental Material Specification DMS-8300, unless noted otherwise.

CHEVRONS



Fixed Base w/ Approved Adhesive (Driveable Base, or Flexible Support can be used)

1. The chevron shall be a vertical rectangle with a minimum size of 12 by 18 inches.
2. Chevrons are intended to give notice of a sharp change of alignment with the direction of travel and provide additional emphasis and guidance for vehicle operators with regard to changes in horizontal alignment of the roadway.
3. Chevrons, when used, shall be erected on the outside of a sharp curve or turn, or on the far side of an intersection. They shall be in line with and at right angles to approaching traffic. Spacing should be such that the motorist always has three in view, until the change in alignment eliminates its need.
4. To be effective, the chevron should be visible for at least 500 feet.
5. Chevrons shall be orange with a black non-reflective legend. Sheeting for the chevron shall be retroreflective Type E (Fluorescent Prismatic) conforming to Departmental Material Specification DMS-8300, unless noted otherwise. The legend shall be black vinyl non-reflective decal sheeting meeting the requirements of DMS-8320.

Posted Speed	Formula	Minimum Desirable Taper Lengths ** 10' Offset	11' Offset	12' Offset	Suggested Maximum Spacing of Channelizing Devices On a Taper	On a Tangent

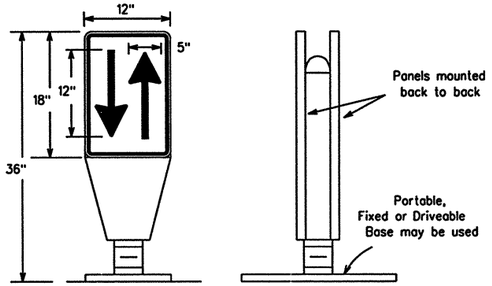
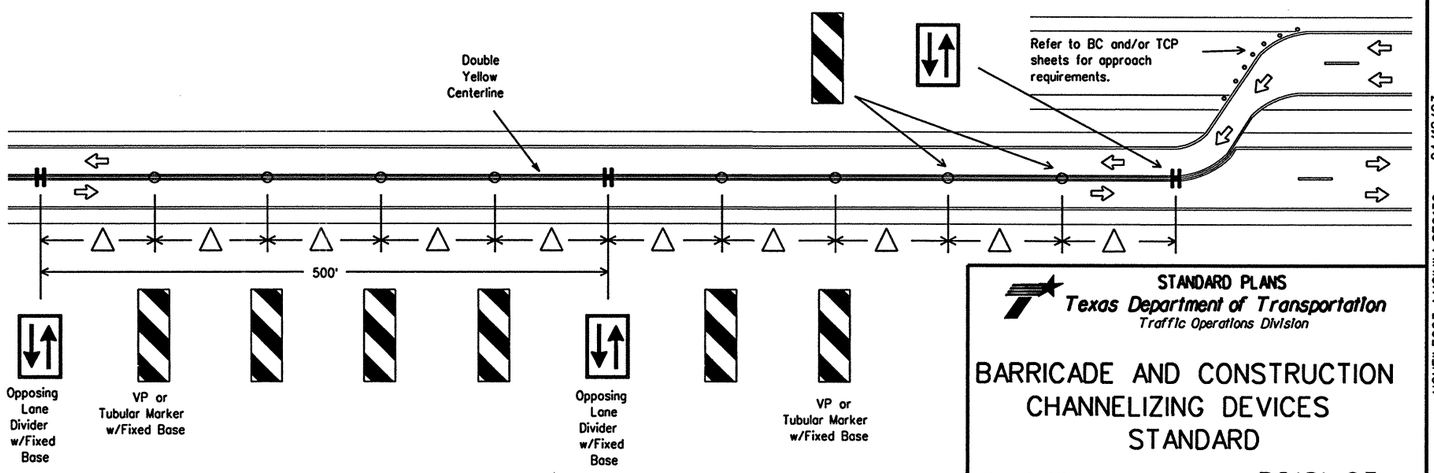
L-Length of Taper (FT.) W-Width of Offset (FT.) S-Posted Speed (MPH)

OPPOSING TRAFFIC LANE DIVIDERS (OTLD)



1. Opposing Traffic Lane Dividers (OTLD) are delineation devices designed to convert a normal one-way roadway section to two-way operation. OTLD's are used on temporary centerlines. The upward and downward arrows on the sign's face indicate the direction of traffic on either side of the divider. The base is secured to the pavement with an adhesive or rubber weight to minimize movement caused by a vehicle impact or wind gust. The OTLD is placed on a flexible self-righting support that returns to an upright position when impacted by a vehicle.
2. The OTLD may be used in combination with simple tubular markers or vertical panels (vp's).
3. Spacing between the OTLD shall not exceed 500 feet. Tubular markers or vp's placed between the OTLD's should not exceed 100 foot spacing.
4. The OTLD shall be orange with a black non-reflective legend. Sheeting for the OTLD shall be retroreflective Type E (Fluorescent Prismatic) conforming to Departmental Material Specification DMS-8300, unless noted otherwise. The legend shall be black vinyl non-reflective decal sheeting meeting the requirements of DMS-8320.



△ Spacing between the VP's or tubular markers shall not exceed 100 feet. On roadways with speeds less than 45 MPH, spacing between the tubular markers or VP's shall be as shown on the channelizing spacing table shown on this page. If the table shows spacing greater than 100 feet based on the roadway speed, then use a maximum of 100 feet spacing between the tubular markers or VP's. Every fifth channelizing device shall be an OTLD. Spacing between the OTLD shall not exceed 500 feet. When using this type of traffic control set-up, the OTLD, VP's or tubular markers shall have the fixed base with approved adhesive per the manufacturer's recommendations.

GENERAL NOTES:

1. Work Zone channelizing devices illustrated on this sheet may be installed in close proximity to traffic and are suitable for use on high or low speed roadways. The Engineer/Inspector shall ensure that spacing and placement is uniform and in accordance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).
2. Channelizing devices shown on this sheet may have a driveable, fixed or portable base. The requirement for self-righting channelizing devices must be specified in the General Notes or other plan sheets.
3. Channelizing devices on self-righting supports should be used in work zone areas where channelizing devices are frequently impacted by errant vehicles or vehicle related wind gusts making alignment of the channelizing devices difficult to maintain. Locations of these devices shall be detailed elsewhere in the plans. These devices shall conform to the TMUTCD and the "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
4. The contractor shall maintain devices in a clean condition and replace damaged, non-reflective, faded, or broken devices and bases as required by the Engineer/Inspector. The Contractor shall be required to maintain proper device spacing and alignment.
5. Portable bases shall be fabricated from virgin and/or recycled rubber. The portable bases shall weigh approximately 35 lbs.
6. Pavement surfaces shall be prepared in a manner that ensures proper bonding between the adhesives, the fixed mount bases and the pavement surface. Adhesives shall be prepared and applied according to the manufacturer's recommendations.
7. The installation and removal of channelizing devices shall not cause detrimental effects to the final pavement surfaces, including pavement surface discoloration or surface integrity. Driveable bases shall not be permitted on final pavement surfaces. The Engineer/Inspector shall approve all application and removal procedures of fixed bases.
8. Examples on this sheet are the most commonly used channelizing devices in work zones. For other devices, refer to the CWZTCD.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

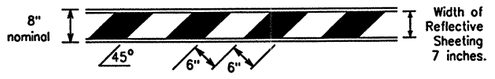
TYPE III BARRICADES

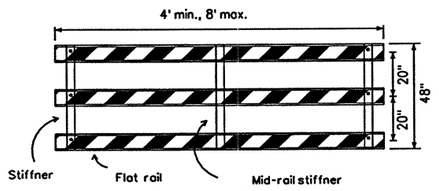
1. Refer to the Compliant Work Zone Traffic Control Devices List (CWZTCD) for details of the Type III Barricades and a list of all materials used in the construction of Type III Baricades.
2. Type III Barricades shall be used at each end of construction projects closed to all traffic.
3. Barricades extending across a roadway should have stripes that slope downward in the direction toward which traffic must turn in detouring. When both right and left turns are provided, the chevron striping may slope downward in both directions from the center of the barricade.
4. Striping of rails, for the right side of the roadway, should slope downward to the left. For the left side of the roadway, striping should slope downward to the right.
5. Identification markings may be shown only on the back of the barricade rails. The maximum height of letters and/or company logos used for identification shall be 1".
6. Barricades shall not be placed parallel to traffic unless an adequate clear zone is provided.
7. Warning lights shall NOT be installed on barricades.
8. Where barricades require the use of weights to keep from turning over, the use of sandbags with dry, cohesionless sand is recommended. The sandbags will be tied shut to keep the sand from spilling and to maintain a constant weight. Rock, concrete, iron, steel or other solid objects will NOT be permitted. Sandbags should weigh a minimum of 35 lbs and a maximum of 50 lbs. Sandbags shall be made of a durable material that tears upon vehicular impact. Rubber (such as tire inner tubes) shall not be used for sandbags. Sandbags shall only be placed along or upon the base supports of the device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners.

Barricades shall NOT be used as a sign support.

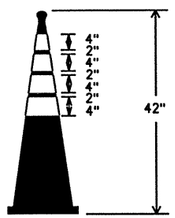
TYPICAL STRIPING DETAIL FOR BARRICADE RAIL



TYPICAL PANEL DETAIL FOR SKID OR POST TYPE BARRICADES



Stiffner may be inside or outside of support.

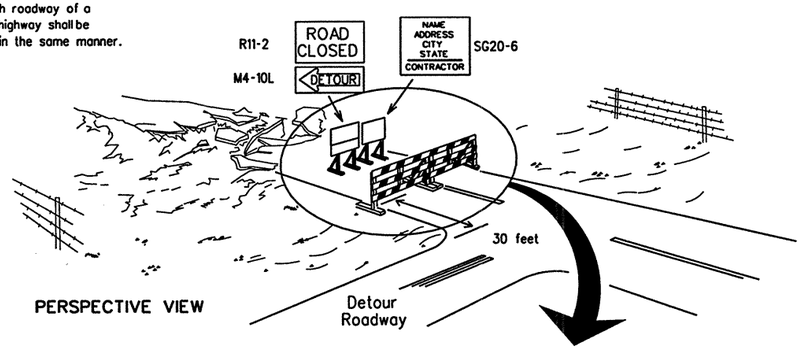


EDGELINE CHANNELIZER

1. This device is intended only for use in place of a vertical panel to channelize traffic by indicating the edge of the travel lane.
2. This device shall not be used to separate lanes of traffic (opposing or otherwise) or warn of objects.
3. This device is based on a 42 inch, two-piece cone with an alternate striping pattern: four 4 inch retroreflective bands, with an approximate 2 inch gap between bands. The color of the band should correspond to the color of the edgeline (yellow for left edgeline, white for right edgeline) for which the device is substituted or for which it supplements. The reflectorized bands shall be retroreflective Type C (High Specific Intensity) conforming to Departmental Material Specification DMS-8300, unless otherwise noted.
4. The base must weigh a minimum of 30 lbs.

TYPE III BARRICADE (POST AND SKID) TYPICAL APPLICATION

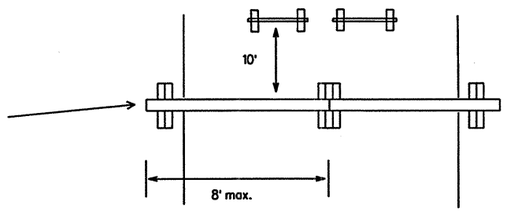
Each roadway of a divided highway shall be barricaded in the same manner.



PERSPECTIVE VIEW

The three rails on Type III barricades shall be reflectorized orange and reflective white stripes on one side facing one-way traffic and both sides for two-way traffic.

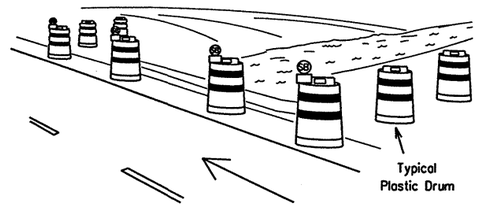
Barricade striping should slant downward in the direction of detour.



PLAN VIEW

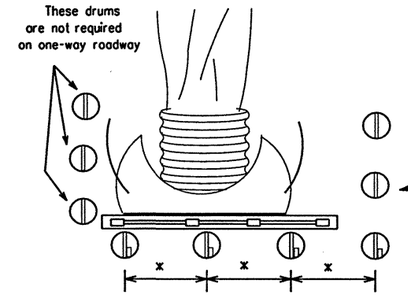
1. Signs should be mounted on independent supports at a 7 foot mounting height in center of roadway. The signs should be a minimum of 10 feet behind Type III Barricades.
2. Advance signing shall be as specified elsewhere in the plans.

CULVERT WIDENING OR OTHER ISOLATED WORK WITHIN THE PROJECT LIMITS



PERSPECTIVE VIEW

1. Where positive redirectional capability is provided, drums may be omitted.
2. Plastic construction fencing may be used with drums for safety as required in the plans.
3. Vertical Panels on flexible support may be substituted for drums when the shoulder width is less than 4 feet.
4. When the shoulder width is greater than 12 feet, steady-burn lights may be omitted if drums are used.
5. Drums must extend the length of the culvert widening.



Increase number of plastic drums on the side of approaching traffic if the crown width makes it necessary. (minimum of 2 and maximum of 4 drums)

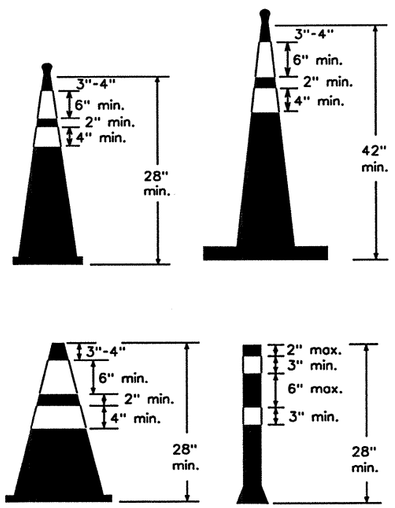
x Maximum spacing between drums shall be 10 feet. A minimum of two drums shall be used across the work area.

PLAN VIEW

Legend

- Plastic drum
- Plastic drum with steady burn light

CONES



28" Cones shall have a minimum weight of 9 1/2 lbs.

42" 2-piece cones shall have a minimum weight of 30 lbs.

1. Traffic cones and tubular markers shall be a minimum of 28 inches in height when used either on freeways or at nighttime.
2. Cones or tubular markers shall be predominantly orange, fluorescent red-orange, or fluorescent yellow-orange. They should be kept clean and bright for maximum visibility.
3. Cones used only for daytime operations do not require the reflectorized bands.
4. Cones used for nighttime operations shall be reflectorized. Reflectorized material shall have a smooth, sealed outer surface that displays the same approximate color during the day and night. The reflectorized bands shall be retroreflective Type C (High Specific Intensity) conforming to Departmental Material Specification DMS-8300, unless otherwise noted.
5. When used at night, appropriate personnel shall ensure that cones and tubular markers remain in their proper location and in an upright position.
6. Reflectorization of cones shall consist of a minimum 6 inch band placed at least 3 inches but not more than 4 inches from the top, supplemented by a minimum 4 inch band spaced a minimum of 2 inches below the 6 inch band.
7. Reflectorization of tubular markers shall be a minimum of two 3 inch bands placed a maximum of 2 inches from the top with a maximum of 6 inches between bands. The reflectorized bands shall be retroreflective Type C (High Specific Intensity) conforming to Departmental Material Specification DMS-8300, unless otherwise noted.
8. One-piece cones or tubular markers are generally suitable for temporary usage (up to 8 hours) with other channelization devices such as vertical panels, drums or two-piece cones for long term usage. Care should be taken to ensure they remain in their proper location and in an upright position.
9. Cones or tubular markers used on each project shall be of the same size and shape.
10. The handle may be designed as a hook or other shape, fabricated from non-rigid materials similar to the cone material, and may extend up to a maximum of 8 inches above the top of cone. Length of the handle shall not be considered with regard to the overall height of the cone.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

WORK ZONE PAVEMENT MARKINGS

GENERAL

1. The Contractor shall be responsible for maintaining work zone and existing pavement markings, in accordance with the standard specifications and special provisions, on all roadways open to traffic within the CSJ limits unless otherwise stated in the plans.
2. Color, patterns and dimensions shall be in conformance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).
3. Additional supplemental pavement marking details may be found in the plans or specifications.
4. Pavement markings shall be installed in accordance with the TMUTCD and as shown on the plans.
5. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard Plan Sheet WZ(STPM).
6. When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and the sections where passing is permitted.
7. All work zone pavement markings shall be installed in accordance with Item 662, "Work Zone Pavement Markings."

RAISED PAVEMENT MARKERS

1. Raised pavement markers are to be placed according to the patterns on BC(11).
2. All raised pavement markers used for work zone markings shall meet the requirements of Item 672, "RAISED PAVEMENT MARKERS" and Departmental Material Specification DMS-4200 or DMS-4300.
3. A list of prequalified reflective raised pavement markers can be found at the following web site:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/dms4200preq.pdf
4. A list of prequalified non-reflective traffic buttons can be found at the following web site:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/4300preq.pdf

PREFABRICATED PAVEMENT MARKINGS

1. Removable prefabricated pavement markings shall meet the requirements of DMS-8241. A list of prequalified products can be found at the following web site:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/pavemark.pdf
2. Non-removable prefabricated pavement markings (foil back) shall meet the requirements of DMS-8240 or the TXDOT Purchase Specification No. 550-74-89. A list of prequalified products and a copy of the TXDOT Purchase Specifications can be found at web sites:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/pavement.pdf
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/tss/tss377.pdf

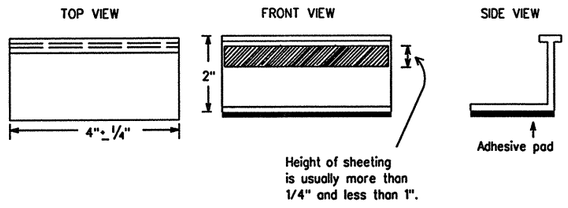
MAINTAINING WORK ZONE PAVEMENT MARKINGS

1. The Contractor will be responsible for maintaining work zone pavement markings within the work limits.
2. Work zone pavement markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections as required by Form 599.
3. The markings should provide a visible reference for a minimum distance of 300 feet during normal daylight hours and 150 feet when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics.
4. Markings failing to meet this criteria shall be replaced as required by the Engineer at the expense of the Contractor.

REMOVAL OF PAVEMENT MARKINGS

1. Pavement markings that are no longer applicable, could create confusion or direct a motorist toward or into the closed portion of the roadway, shall be removed or obliterated before the roadway is opened to traffic.
2. The above shall not apply to detours in place for less than two weeks, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route.
3. Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking, by any method that does not materially damage the surface or texture of the pavement.
4. The removal of pavement markings may require resurfacing or seal coating portions of the roadway.
5. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used.
6. Blast cleaning may be used but will not be required unless specifically shown in the plans.
7. Over-painting of the markings SHALL NOT BE permitted.
8. Removal of raised pavement markers shall be as directed by the Engineer.
9. Removal of existing pavement markings and markers will be paid for directly in accordance with Item 677, "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS," unless otherwise stated in the plans.

Temporary Flexible-Reflective Roadway Marker Tabs



STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS TO THE PAVEMENT SURFACE

1. Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of DMS-8242.
2. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A. Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Pavement Section to determine specification compliance.
   B. Select five (5) tabs and perform the following test. Affix five (5) tabs at 24 inch intervals on an asphaltic pavement in a straight line. Using a medium size passenger vehicle or pickup, run over the markers with the front and rear tires at a speed of 35 to 40 miles per hour, four (4) times in each direction. No more than one (1) out of the five (5) reflective surfaces shall be lost or displaced as a result of this test.
3. Small design variances may be noted between tab manufacturers.

Raised Pavement Markers used as Guidemarks

1. Raised pavement markers used as guidemarks shall be from the approved product list, and meet the requirements of DMS-4200.
2. All temporary construction raised pavement markers provided on a project shall be of the same manufacturer.
3. Adhesive for guidemarks shall be bituminous material hot applied or butyl rubber pad for all surfaces, or thermoplastic for concrete surfaces.

Guidemarks shall be designated as:
YELLOW - (two amber reflective surfaces with yellow body).
WHITE - (one silver reflective surface with white body).

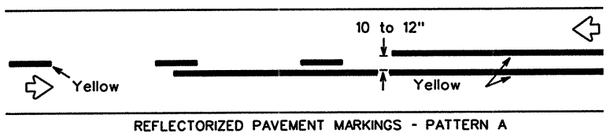
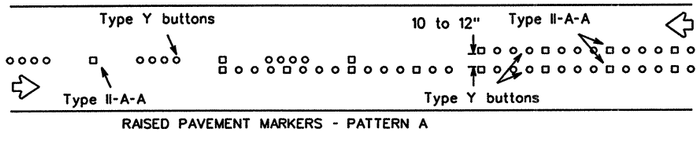
PAVEMENT MARKING PATTERNS

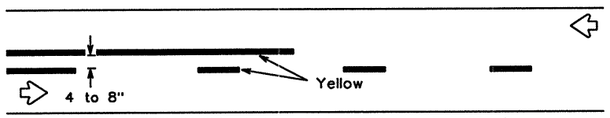
CENTER LINE & NO-PASSING ZONE BARRIER LINES FOR TWO-LANE, TWO-WAY HIGHWAYS



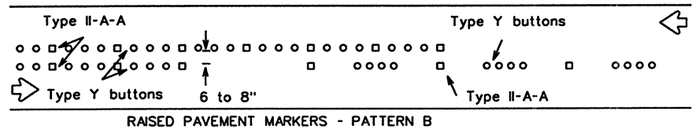
REFLECTORIZED PAVEMENT MARKINGS - PATTERN A



RAISED PAVEMENT MARKERS - PATTERN A



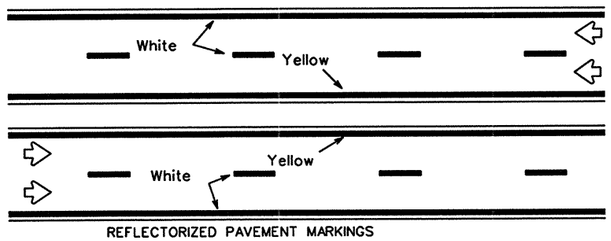
REFLECTORIZED PAVEMENT MARKINGS - PATTERN B



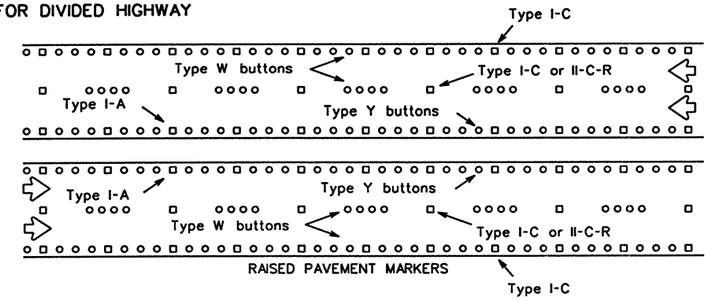
RAISED PAVEMENT MARKERS - PATTERN B

Pattern A is the TXDOT Standard, however Pattern B may be used if approved by the Engineer. Prefabricated markings may be substituted for reflectorized pavement markings.

EDGE & LANE LINES FOR DIVIDED HIGHWAY



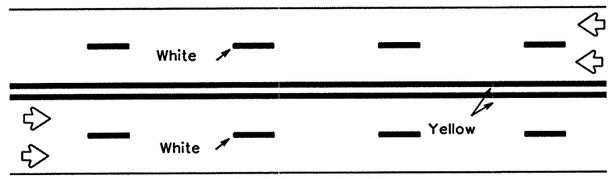
REFLECTORIZED PAVEMENT MARKINGS



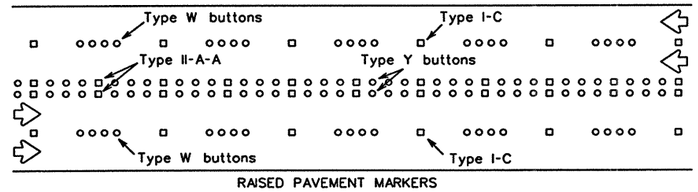
RAISED PAVEMENT MARKERS

Prefabricated markings may be substituted for reflectorized pavement markings.

LANE & CENTER LINES FOR MULTILANE UNDIVIDED HIGHWAYS



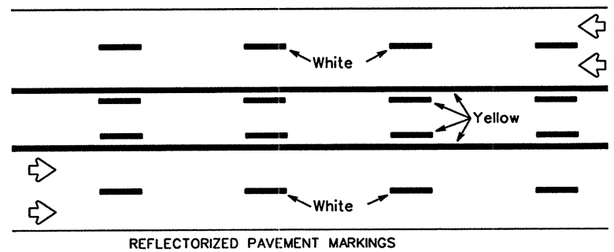
REFLECTORIZED PAVEMENT MARKINGS



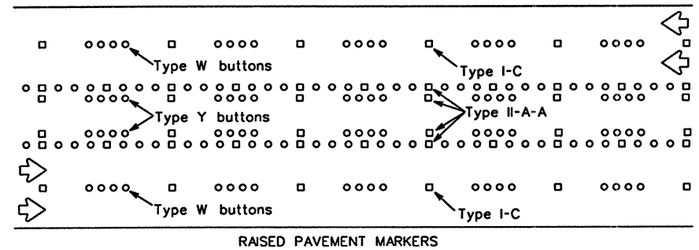
RAISED PAVEMENT MARKERS

Prefabricated markings may be substituted for reflectorized pavement markings.

TWO-WAY LEFT TURN LANE



REFLECTORIZED PAVEMENT MARKINGS



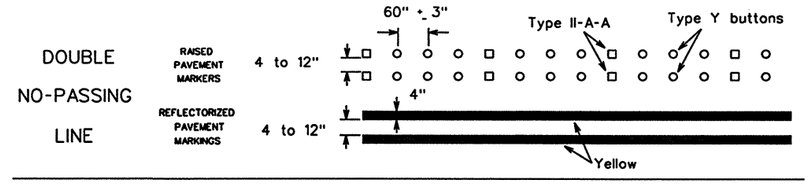
RAISED PAVEMENT MARKERS

Prefabricated markings may be substituted for reflectorized pavement markings.

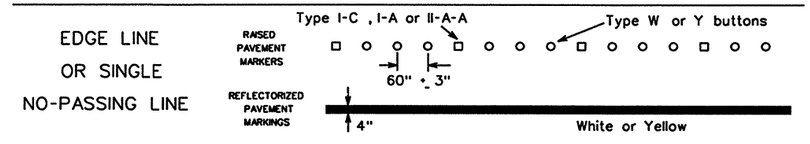
STANDARD WORK ZONE PAVEMENT MARKINGS DETAILS

SOLID LINES

DOUBLE NO-PASSING LINE

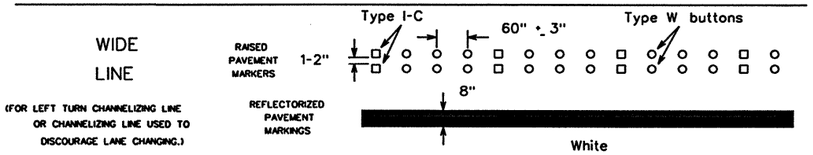


EDGE LINE OR SINGLE NO-PASSING LINE



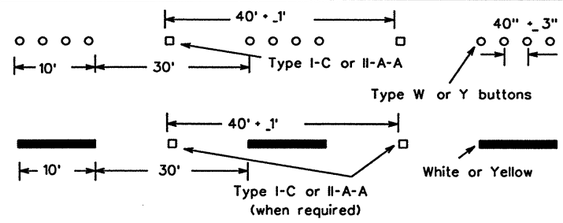
WIDE LINE

(FOR LEFT TURN CHANNELIZING LINE OR CHANNELIZING LINE USED TO DISCOURAGE LANE CHANGING.)



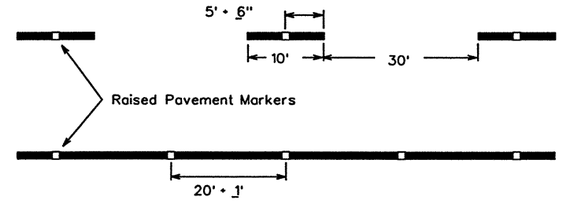
BROKEN LINE

(FOR CENTER LINE OR LANE LINE.)



REMOVABLE MARKINGS WITH RAISED PAVEMENT MARKERS

If raised pavement markers are used to supplement REMOVABLE markings, the markers shall be applied to the top of the tape at the approximate mid length of tape used for broken lines or at 20 foot spacing for solid lines. This allows an easier removal of raised pavement markers and tape.



Centerline only - not to be used on edge lines

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

GENERAL NOTES

1. The nose of the REACT 350 shall be clad with a plastic wrap with standard delineation adhered to the wrap and shall have a series of side marker reflectors on both sides of the unit. See site plan views for marker and plastic wrap color orientation.
2. All steel components to be hot dipped galvanized except stakes, drive spikes, threaded bolts in backup unit, and wedge fittings on cables.
3. Contact QUIXOTE TRANSPORTATION SAFETY INC.(1-888-323-6374) if the REACT 350 is to span expansion joints.
4. The installation area should be free from curbs, elevated objects, or depressions.

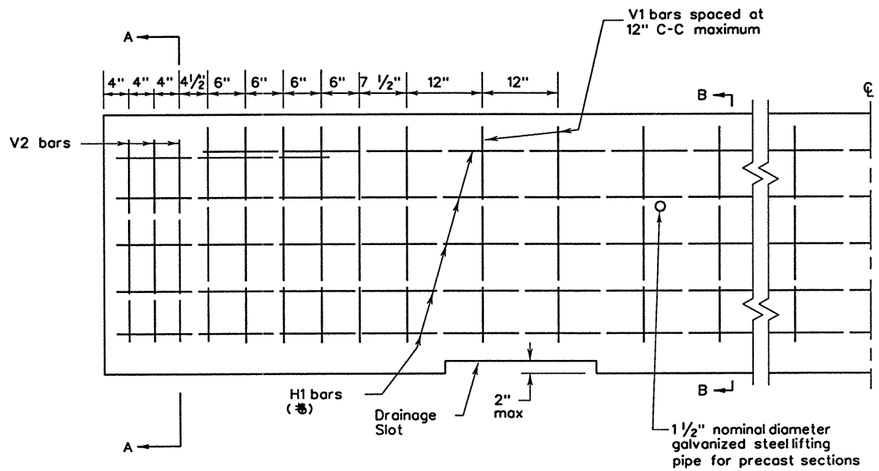
PLAN VIEW

(SYMMETRICAL ABOUTCENTER LINE)

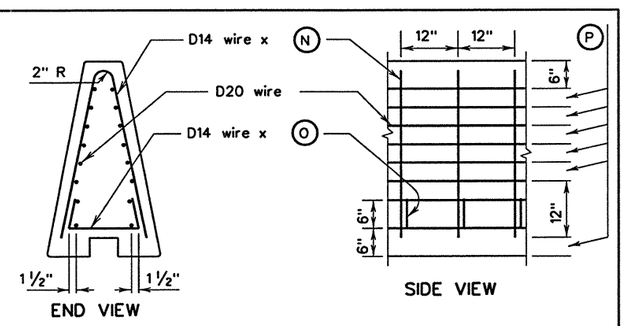


ELEVATION

(SYMMETRICAL ABOUT CENTERLINE)

When precast barrier is to be used with the welded wire fabric option, conventional bar reinforcement will be required within 2 ft., plus a development length of 18", from the ends of each barrier segment.

Welded wire fabric
Ⓟ x 12 - D20 x D14
60 ksi minimum yield strength



END VIEW

SIDE VIEW

WELDED WIRE FABRIC OPTIONAL REINFORCING

GENERAL NOTES

1. Precast barrier length shall be 30 feet (1") unless otherwise specified in the plans. Cast-in-place or slip-formed barrier shall have an intermediate barrier joint at a maximum spacing of 100 feet unless otherwise directed by the Engineer. Refer to the intermediate barrier joint detail. Cast-in-place or slip-formed barrier will have the vertical V1 bars placed at 12" C-C maximum except near joints. The narrower vertical bar spacing at the ends of each barrier segment, as shown in the elevation view, will be required at the joints. The V2 bars shown in the elevation view will be replaced by V1 bars for cast-in-place or slip-form construction.
2. The usual temporary installation will require the placement of the rebar grid in the ungrouted slot. The usual permanent installation using precast barrier will connect the barrier segments with the rebar grid placed in the slot and grouted in place.
3. When installed in a permanent roadway location, the end connections of the precast barrier shall be grouted with a mixture of two parts sand and one part cement with enough water to make the mixture plastic. Grouting shall be done in a manner that will assure a smooth surface at the joint.
4. All concrete shall be class C or H, unless otherwise specified.
5. All reinforcing steel shall be Grade 60, unless otherwise specified.
6. Each precast barrier to be installed in a temporary location shall be delivered with a rebar grid.
7. Chamfer top and end edges ¾inch.
8. Unless otherwise shown in the plans, the Contractor has the option of placing either precast or cast-in-place permanent concrete barrier. Cast-in-place barrier may be slip-formed. Additional reinforcement may be tack welded to the upper two-thirds of the reinforcing cage to provide bracing. Lifting pipe, rebar grid and slot shall be omitted for cast-in-place or slip-form construction.
9. Bar splices for roadway barrier shall be a minimum of 24 times the nominal diameter of the bar.
10. Welded wire fabric may be used as an option to conventional reinforcement for precast or cast-in-place barrier. Welded wire fabric shall be made in accordance with ASTM A 497.
11. Conduit will be provided only when called for elsewhere in the plans. The position of the conduit or conduit passageway may be adjusted to facilitate construction, subject to approval of the Engineer.
12. Transitions to barrier height, as needed, shall be determined by the Engineer. Changes in barrier height should not normally exceed 2 inches per 30 foot. Vertical steel shall be uniformly transitioned throughout the variation in barrier height as directed by the Engineer.
13. A 36 inch minimum height differential between top of barrier and top of ACP shall be required at placement in order to allow for up to 6 inches of future overlays while maintaining a 30 inch minimum future effective height of barrier. Total minimal barrier height for design is therefore dictated by allowance for future overlays plus existing stairstep dimension "S". Minimums typically rounded to 42", 48" or 54" to facilitate precasting.

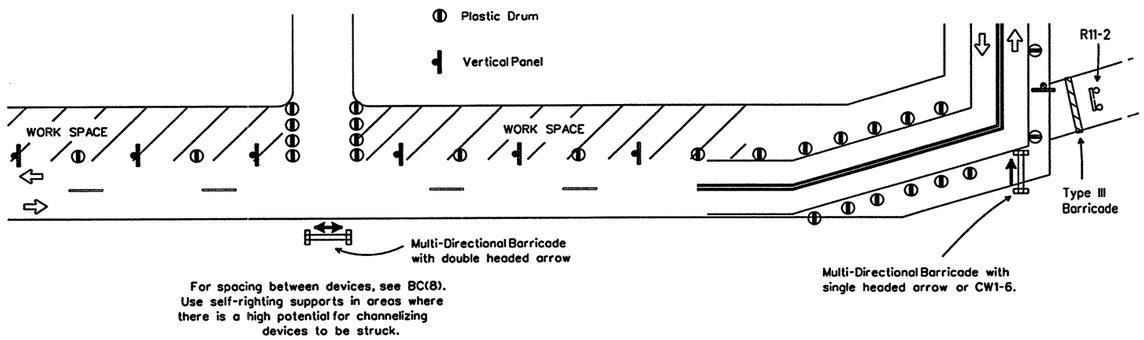
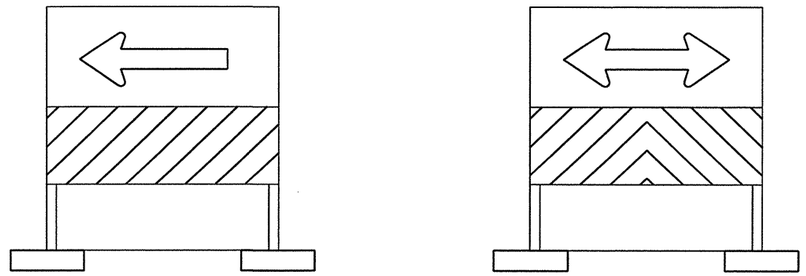
CHANNELIZING DEVICES FOR URBAN ROADWAY TYPE PROJECT



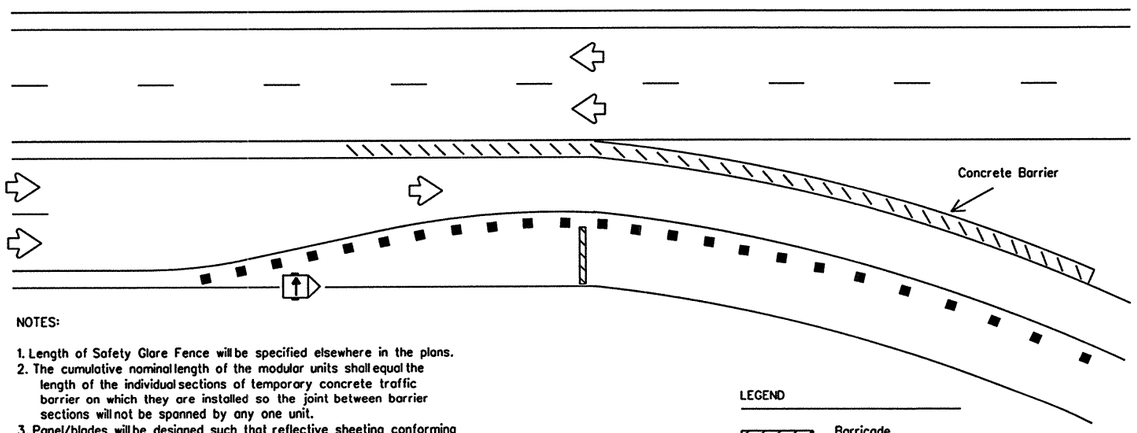
For spacing between devices, see BC(8). Use self-righting supports in areas where there is a high potential for channelizing devices to be struck.

MULTI-DIRECTIONAL BARRICADE



1. Multi-directional barricade shall not be used for lane closures.
2. May be used for sharp changes in alignment, or across roadway from stem of "T" intersection.
3. Typically used for Intermediate Term Stationary, Short Term Stationary or Short Duration work zone operations.
4. See the CWZTCD List for approved designs.

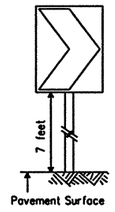
BARRIER DELINEATION WITH SAFETY GLARE FENCE



NOTES:

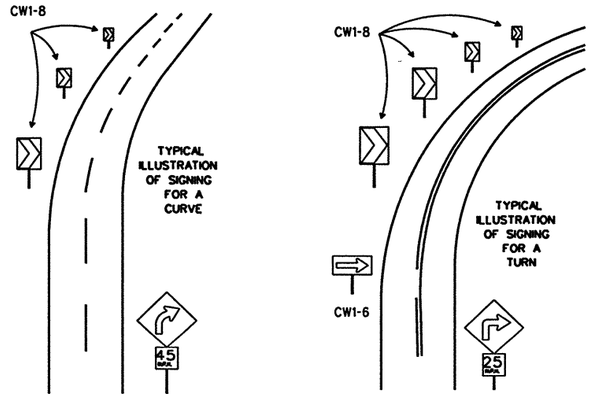
1. Length of Safety Glare Fence will be specified elsewhere in the plans.
2. The cumulative nominal length of the modular units shall equal the length of the individual sections of temporary concrete traffic barrier on which they are installed so the joint between barrier sections will not be spanned by any one unit.
3. Panel/blades will be designed such that reflective sheeting conforming with Departmental Material Specification DMS-8300, Flat Surface Reflective Sheeting, Type C (High Specific Intensity), minimum size of 2 inches by 12 inches can be attached to the edge of the panel/blade. The sheeting shall be attached to one panel/blade per section of concrete barrier not to exceed a spacing of 30 feet. Barrier reflectors are not necessary when panel/blades are installed.
4. Moduler Glare Screens for head light barrier shall meet the requirements of DMS-8610.

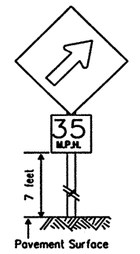
USAGE OF CW1-6, ECW1-6a AND CW1-8 SIGNS



CW1-8

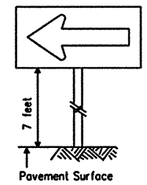
The CHEVRON sign (CW1-8) may be used to replace roadside delineation on curves or used in transitions or tapers.





ECW1-6a

An UPWARD SLOPING ARROW sign (ECW1-6a) is intended to be used to indicate the beginning of a curve or transition. It should be preceded with an appropriate curve sign when needed, and should not be used throughout the curve or transition. Advisory speed plaque is optional.



CW1-6

A LARGE ARROW sign (CW1-6) is intended to be used to give notice of a sharp change in alignment (turn) in the direction of travel. It should be preceded with an appropriate advance construction warning turn sign.

NOTES:

1. CW1-6, ECW1-6a & CW1-8 signs shall be mounted on fixed supports.
2. Chevrons, when used, shall be erected on the outside of a sharp curve or turn, or on the far side of an intersection. They shall be in line with and at right angles to approaching traffic. Spacing should be such that the motorist always has three in view, until the change in alignment eliminates its need.
3. For two-way traffic, use some arrangement of signs on outside of curve for each direction of travel.
4. Appropriate advance warning CURVE or TURN sign with Advisory Speed ploque should be used when needed.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

REFER TO THE BC SHEETS FOR SHEETING REQUIREMENT ON CHANNELIZING DEVICES.

The five categories of work duration and their time at a location shall be:

A. Long-term stationary is work that occupies a location more than 3 days.

B. Intermediate-term stationary is work that occupies a location more than one daylight period up to 3 days, or nighttime work lasting more than 1 hour.

C. Short-term stationary is daytime work that occupies a location for more than 1 hour, but less than 12 hours.

D. Short duration is work that occupies a location up to 1 hour.

E. Mobile is work that moves intermittently or continuously.

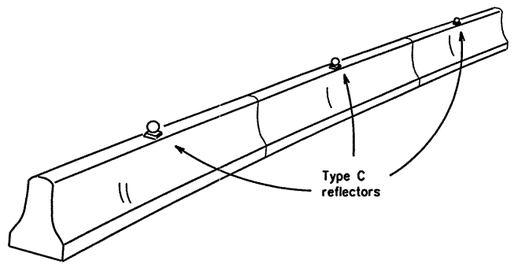
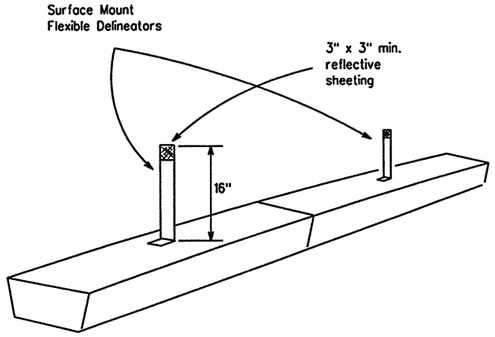
CONCRETE TRAFFIC BARRIER (CTB)



NOTE:
Pavement markers or temporary flexible-reflective roadway marker tabs shall NOT be used as barrier delineation.

LOW PROFILE CONCRETE BARRIER (LPCB)



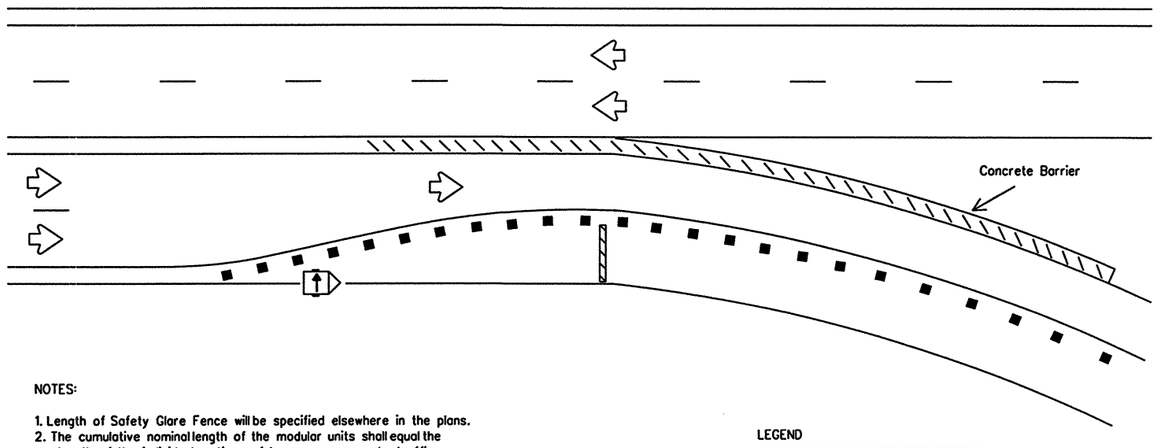
Barrier reflectors will be installed only on barriers designated for reflectorization as required elsewhere in the plans.

Reflectors should be mounted one reflector per section of barrier, preferably in the center.

Maximum spacing of reflectors is 40 feet for CTB and 20 feet for LPCB. Mount reflectors to barrier with construction adhesive or butyl rubber adhesive.

Color of barrier reflectors will conform to the Texas "Manual on Uniform Traffic Control Devices", (TMUTCD).

BARRIER DELINEATION WITH SAFETY GLARE FENCE



NOTES:

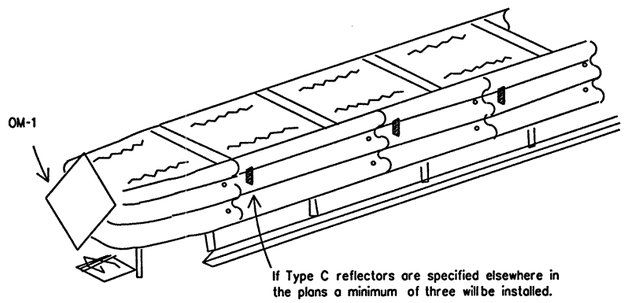
1. Length of Safety Glare Fence will be specified elsewhere in the plans.
2. The cumulative nominal length of the modular units shall equal the length of the individual sections of temporary concrete traffic barrier on which they are installed so the joint between barrier sections will not be spanned by any one unit.
3. Panel/blades will be designed such that reflective sheeting conforming with Departmental Specification D-9-8300, Type C, minimum size of 2 inches by 12 inches can be attached to the edge of the panel/blade. The sheeting shall be attached to one panel/blade per section of concrete barrier not to exceed a spacing of 30 feet. Barrier reflectors are not necessary when panel/blades are installed.

LEGEND

- Barricade
- Channelizing devices
- Trailer mounted flashing arrow panel
- Safety glare fence

DELINEATION OF SAFETY END TREATMENTS

⚠1



If Type C reflectors are specified elsewhere in the plans a minimum of three will be installed.

	APPROACHING TRAFFIC	
	BOTH SIDES	ONE SIDE
DELINEATION	OM-1	OM-3 or Vertical Panel

REFLECTORS FOR CONCRETE TRAFFIC BARRIER, AND ATTENUATORS

Type C reflectors may be installed using pop rivets, nuts and bolts, construction adhesive or butyl rubber adhesive.

Type C reflectors shall be prequalified and shall conform to the color and reflectivity requirements of Specification D-9-8600.

Color of Type C reflector will be the same as the nearest edge line, gore pavement marking or as directed by the Engineer.

Unless stated elsewhere in the plans, delineation and reflectors shown on this standard shall be considered subsidiary to the various bid items.

COLOR	USAGE	SHEETING MATERIAL
ORANGE	BACKGROUND	TYPE E (FLUORESCENT PRISMATIC)
BLACK	LEGEND & BORDERS	VINYL NON-REFLECTIVE DECAL SHEETING

GENERAL NOTES:

1. If spalling or holes occur, ROUGH ROAD signs should be placed in advance of the condition and may be repeated throughout the project.
2. UNEVEN LANES sign (CW8-11) should be installed in advance of the condition and repeated every mile. Signs installed along the uneven lane condition may be supplemented with the NEXT XX MILES sign (CW21-16) or Advisory Speed sign (CW13-1).
3. NO CENTER STRIPE signs (CW8-12) should be installed if centerlines or lane lines are obscured or obliterated. The signs should remain in place until permanent pavement markings are installed.
4. Signs shall be spaced at the distances recommended as per BC standards.
5. When operations are completed and final surface treatment will not be applied as part of this project, advance signs shall be left in place and become the property of the State. These signs shall be installed on approved permanent sign supports as per TxDOT standards. Additional signs may be required as directed by the Engineer. Minimum mounting height of signs is 7 feet. Signs shall remain in place until final surface is applied. Signs shall be considered subsidiary to the Item "BARRICADES, SIGNS AND TRAFFIC HANDLING."
6. Pavement markings shall be replaced as operations proceed.
7. Short term markings shall not be used to simulate edge lines.
8. All signs shall be constructed in accordance with the details found in the "Standard Highway Sign Designs for Texas," latest edition. Sign details not shown in this manual shall be shown in the plans or the Engineer shall provide a detail to the Contractor before the sign is manufactured.

TRAFFIC CONTROL DURING PLANING, OVERLAY AND LEVELING OPERATIONS ARE SHOWN ELSEWHERE IN THE PLANS.

FIGURE 1

Edge Condition	Edge Height (D)	Warning Devices
	less than or equal to 1" greater than 1" to: 1¼" (maximum-planing) 1½" (typical-overlay)	Signs: ECW8-8 Signs: CW8-11, ECW8-8

Distance "D" may be a maximum of 1¼" for planing operations and 2" for overlay operations if uneven lanes are open to traffic after work operations cease.

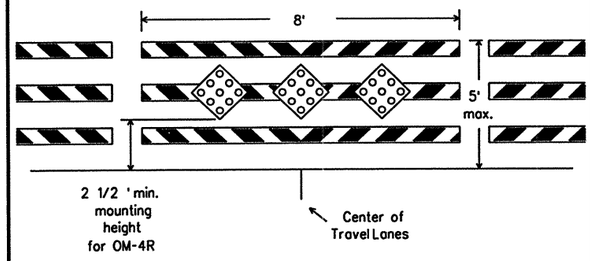
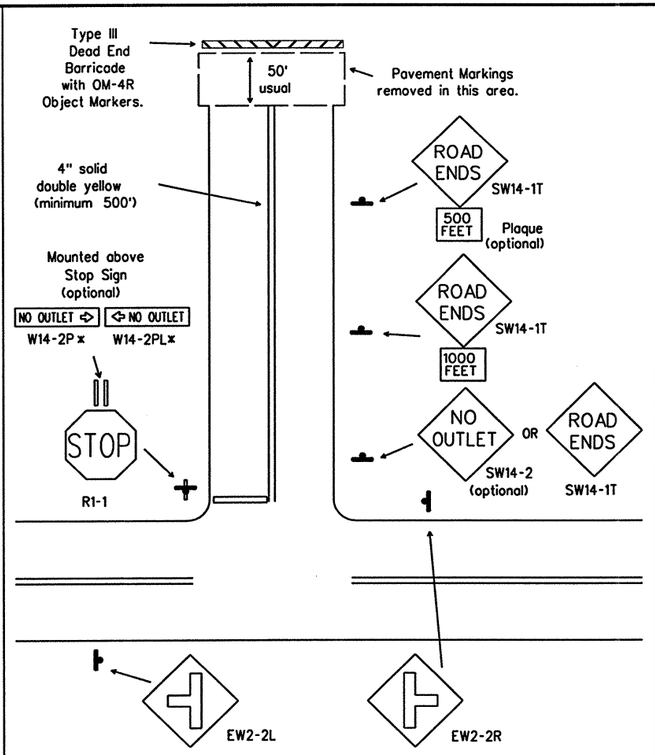
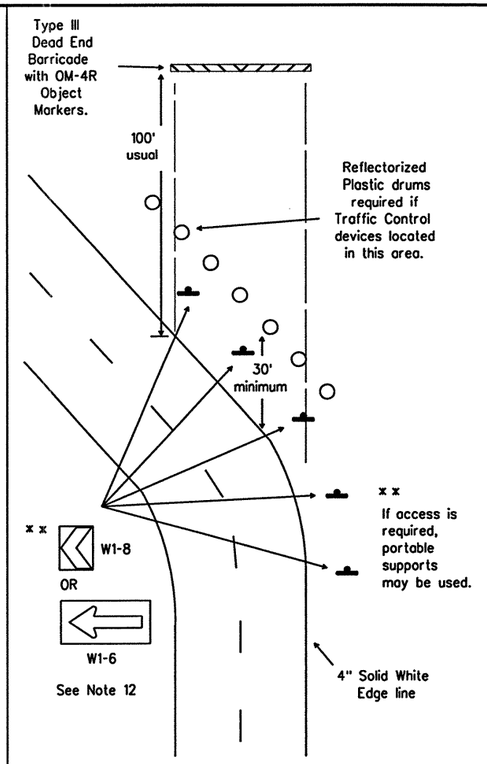
TYPICAL DEAD END BARRICADE INSTALLATION



Barricade striping is red and white sloping toward the center of the roadway. (See Note 1)



x W14-1P DEAD END plaque may be used as an alternate.



Devices shown for one direction of travel

DEPARTMENTAL MATERIAL SPECIFICATIONS	
PLYWOOD SIGN BLANKS	DMS-7100
ALUMINUM SIGN BLANKS	DMS-7110
SIGN HARDWARE	DMS-7120
WINGED CHANNEL POSTS	DMS-7130
FLAT SURFACE REFLECTIVE SHEETING	DMS-8300
VINYL NON-REFLECTIVE DECAL SHEETING	DMS-8320
DELINEATORS AND OBJECT MARKERS	DMS-8600

COLOR	USAGE	SHEETING MATERIAL
RED	BACKGROUND	TYPE C (HIGH SPECIFIC INTENSITY)
WHITE	BACKGROUND	TYPE C (HIGH SPECIFIC INTENSITY)
YELLOW	BACKGROUND	TYPE C (HIGH SPECIFIC INTENSITY)
BLACK	LEGEND & BORDERS	VINYL NON-REFLECTIVE SHEETING

GENERAL NOTES:

1. Barricade striping shall be red and white reflective sheeting for all permanent road closures. Orange and white reflective sheeting may be substituted for locations where duration of road closure is expected to be 18 months or less, or when approved by the Engineer. Red and orange reflective sheeting shall not be combined on barricades or locations.
2. Barricades shall be designed and constructed to Compliant Work Zone Traffic Control Device List (CWZTCD) standards in a first-class workmanship manner of clean sound material. Components made of lumber shall be painted with a minimum of two coats of white paint to ensure thorough coverage and a uniform white color. Barricade striping material shall meet the color and retroreflective requirements of Departmental Material Specification DMS-8300, Type C.
3. Post type breakaway supports shall be used as barricade supports. Barricades may be fabricated with "skid" supports if approved by the Engineer. Skid supports should be anchored using sand bags to prevent movement. For construction details of post (fixed Type III barricades) see CWZTCD list Part D.2.f. The dead end road barricades may also be anchored to the pavement using the bolt down median anchor manufactered by Universal Anchor System shown on SMD(FRP). The barricades shall be built using FRP posts and approved rails as shown on the CWZTCD List.
4. Barricades shall not be placed parallel to traffic unless a minimum adequate clear zone of 30 feet from edge of travel lane is provided.
5. A minimum of one 8-foot wide barricade and three OM-4R object markers shall be required for all locations. Barricades shall extend across all travel lanes and shoulders if shoulders are present. Barricades may be extended to the ROW as directed by Engineer.
6. Stockpiled materials shall not be placed on traffic side of barricades.
7. OM-4 object markers shall be mounted to the middle rail using two 1/2" through bolts with flat washers and lock washers.
8. OM-4 object markers shall be constructed of 0.063 aluminum and shall meet the color and reflective requirements of DMS-8300 Type C and DMS-8600.
9. Plastic drums shall meet the requirements as listed on the CWZTCD list or the BC Standards. Plastic drums may be anchored with adhesive to prevent movement.
10. All signs and chevrons shall be installed with hardware and support at the minimum mounting height in accordance with the SMD and BC Standards. Signs shall be mounted at a 7 foot minimum height. Signs shall not be attached to barricades.
11. Motorists should be able to see at least three chevron signs as they approach the curve and as they drive through the curve from either direction.
12. Delineation devices such as the chevron or large arrow signs shall only be placed on the outside portion of a curve.

GENERAL NOTE FOR SIGNS:

1. The alphabets and lateral spacing between letters and numerals shall conform with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD), latest edition, and any approved changes thereto.
2. Lateral spacing of text shall provide a balanced appearance.
3. All materials shall conform to Departmental Material Specifications.
4. Legend shall be black and applied by screening process, cut-out vinyl non-reflective sheeting or combination thereof.
5. Sign blanks shall be any material that meets the DMS requirements for permenant sign substrates.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

GENERAL NOTES:

1. See BC and SMD sheets for additional sign support details.
2. Sign locations shall be approved by the Engineer.
3. For projects more than two miles in length, Give Us a BRAKE and WORK ZONE SPEED LIMIT signs should be repeated halfway through the project.
4. The WORK ZONE (G20-9) sign is to be installed in combination with a SPEED LIMIT (R2-1) sign.
5. Speed limits shall be regulatory and approved by the Transportation Commission.
6. EG20-9, G20-9, ER2-1, R2-1, ER2-5a, R2-5a and CW21-1T signs and supports shall be considered subsidiary to Item 502, "Barricades, Signs and Traffic Handling."
7. G20-7 and EG20-7 signs shall be paid for under the following bid items:
   Item 634 Plywood Signs Type A
   Item 647 Large Roadside Sign Supports
   Item 656 Foundations for Signs, Traffic Signals and Roadway Ill. Assem.
8. All signs shall be constructed in accordance with the details found in the "Standard Highway Sign Designs for Texas," latest edition. Sign details not shown in this manual shall be shown in the plans or the Engineer shall provide a detail to the Contractor before the sign is manufactured.

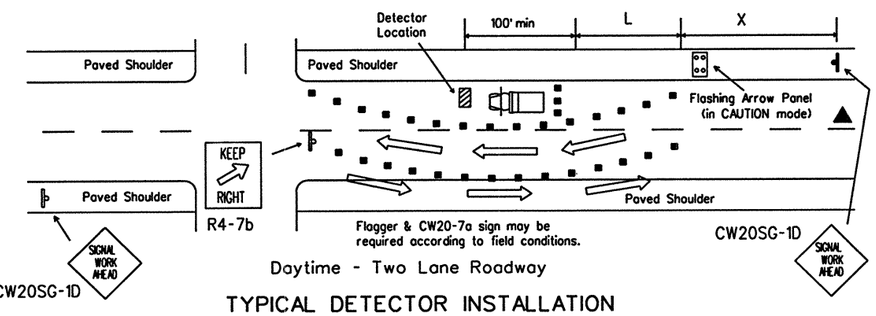
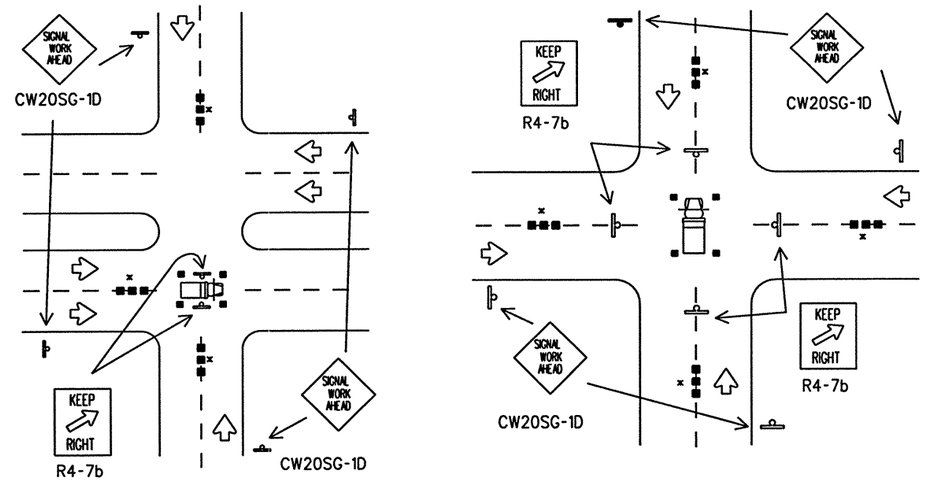
L=Length of Taper (FT.) W=Width of Offset (FT.) S=Posted Speed (MPH)



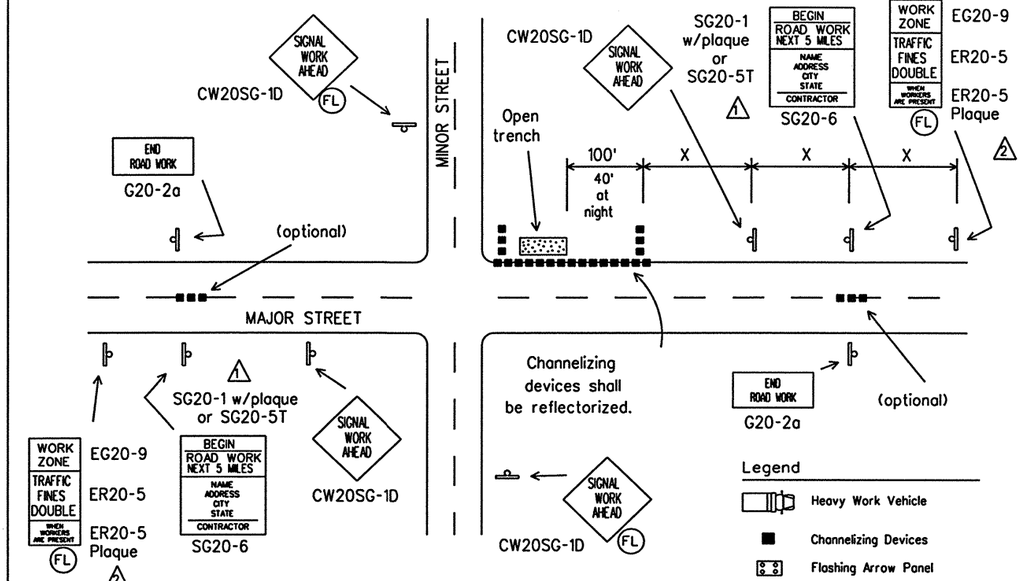
TYPICAL DETECTOR INSTALLATION
OR OTHER WORK OPERATIONS THAT ARE SHORT TERM OR SHORT DURATION

Nighttime Channelizing Devices shall be reflectorized.



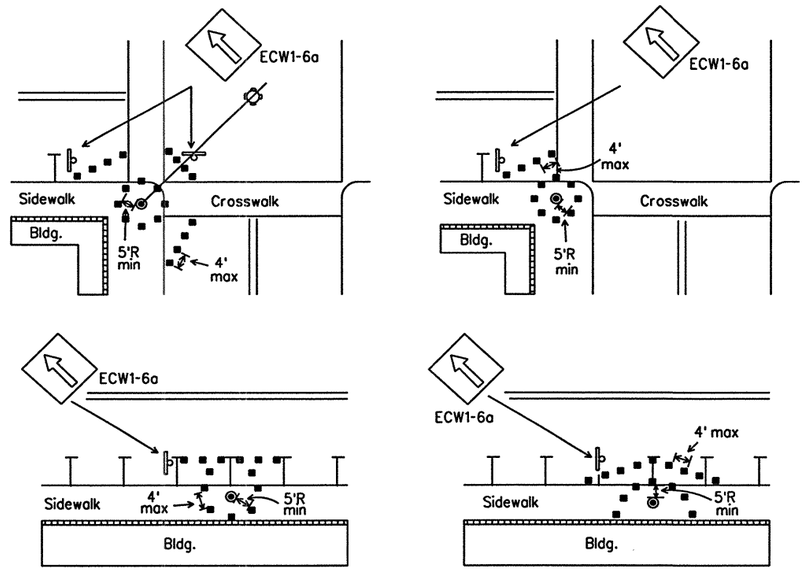
TYPICAL HANGING SIGNAL INSTALLATIONS
OR OTHER WORK OPERATIONS THAT ARE SHORT TERM OR SHORT DURATION

x Advance warning channelizing devices are optional.



TYPICAL ADVANCE SIGNING
FOR LONG TERM and INTERMEDIATE-TERM STATIONARY WORK OPERATIONS

Observe Warning Signs State Law (R20-3) shall be required.
See BC(2).
Location will be as directed by the Engineer.



Channelizing devices should not be placed closer than 5 foot radius (minimum) to signal poles.
Parking may be eliminated by placing channelizing devices in spaces.
If pedestrian walkways are blocked, refer to the Texas Manual on Uniform Traffic Control Devices (TMUTCD) Part 6.

TYPICAL RESTRICTED PEDESTRIAN MOVEMENTS
FOR ALL WORK OPERATIONS REGARDLESS OF WORK DURATION

▲ The arrow panel may be omitted when stated elsewhere in the plans.

1. Typical channelizing device is the 28" cone.
2. Plastic drums or vertical panels may be used if approved by the Engineer.
3. For several closely adjoining projects, advance signing may not be required in advance of each intersection, but only in advance of the intersections at the project limits.
4. See details elsewhere in the plans for advance signing requirements.
5. Advance signs shall be in place when signal construction operations are in progress.
6. The contractor shall remove advance signs when no construction operations are underway.
7. Obstructions or hazards at the work area shall be clearly marked and delineated at all times.
8. All holes, trenches or other hazardous areas shall be adequately protected by lights or other protective devices.
9. Trenches shall be covered or surrounded with orange plastic construction fence as directed by the Engineer.
10. Flagger and FCW20-7a sign may be required according to field conditions.
11. Vehicles parked in roadway shall be equipped with two strobes.
12. High level flags at corners of vehicle may also be used.
13. Work operations that require work vehicle in traveled way 20 minutes or less may use cones, high level flags and strobes as advance warning devices.
14. Cones should only be placed around vehicle.
15. Flaggers may be used on high speed rural intersections.

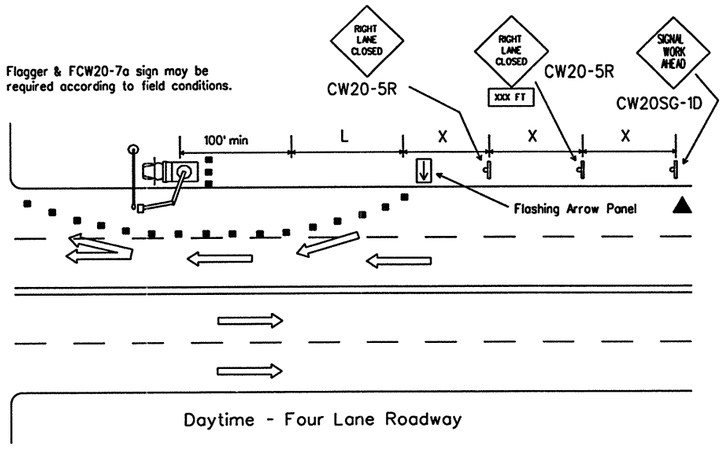
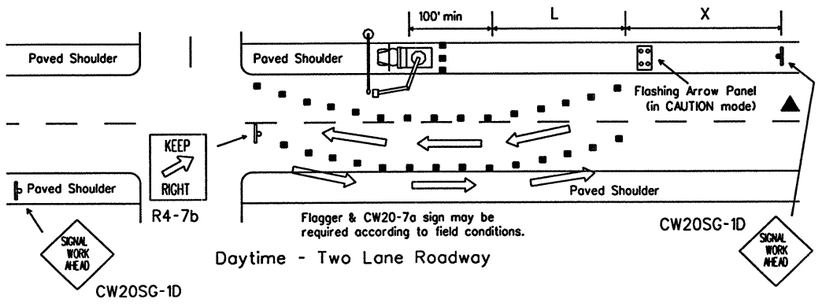
"ABOVE LANE" WORK PERFORMED BY BUCKET TRUCK



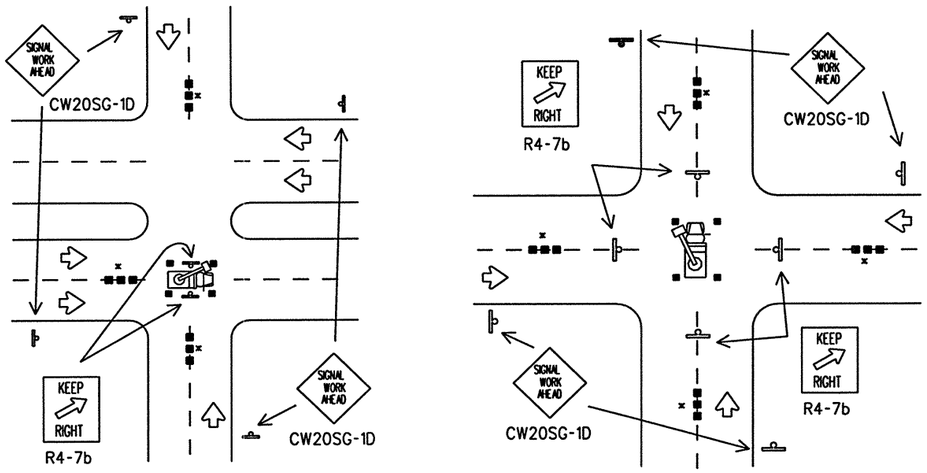
Daytime - Four Lane Roadway



Daytime - Two Lane Roadway

▲ The arrow panel may be omitted when stated elsewhere in the plans.

"ABOVE TRUCK" WORK PERFORMED BY BUCKET TRUCK



GENERAL NOTES FOR WORK ZONE SIGNS

1. Contractor shall install and maintain signs in a straight and plumb condition and/or as directed by the Engineer.
2. Wooden sign posts shall be painted white.
3. Barricades shall NOT be used as sign supports.
4. Nails shall NOT be used to attach signs to any support.
5. All signs shall be installed in accordance with the plans or as directed by the Engineer. Signs shall be used to regulate, warn, and guide the traveling public safely through the work zone.
6. The Contractor may furnish either the sign design shown in the plans or in the "Standard Highway Sign Designs for Texas" (SHSD). The Engineer/Inspector may require the Contractor to furnish other work zone signs that are shown in the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) but may have been omitted from the plans. Any variation in the plans shall be documented by written agreement between the Engineer and the Contractor's Responsible Person. All changes must be documented in writing before being implemented. This can include documenting the changes in the Inspector's TxDOT diary and having both the Inspector and Contractor initial and date the agreed upon changes. The additional signs requested by the Engineer/Inspector shall not be subsidiary.
7. The Contractor shall furnish sign supports listed in the "Compliant Work Zone Traffic Control Device List" (CWZTCD). The Contractor shall install the sign support in accordance with the manufacturer's recommendations. If there is a question regarding installation procedures, the Contractor shall furnish the Engineer a copy of the manufacturer's installation recommendations so that the Engineer can verify the correct procedures are being followed.
8. The contractor is responsible for sign installations and replacing signs with damaged or cracked substrates and/or damaged or marred reflective sheeting as directed by the Engineer/Inspector.
9. Identification markings may be shown only on the back of the sign substrate. The maximum height of letters and/or company logos used for identification shall be 1".
10. The Contractor shall replace damaged wood posts. New or damaged wood sign posts shall not be spliced.

Duration of Work (as defined by the TMUTCD Part 6)

The types of sign supports, the size of signs, and the type of sign substrates can vary based on the type of work being performed. The Engineer is responsible for selecting the appropriate size sign for the type of work being performed. The Contractor is responsible for ensuring that the sign support and substrate meets crashworthiness and length of work requirements.

a. Long-term stationary is work that occupies a location more than 3 days.
b. Intermediate-term stationary is work that occupies a location more than one daylight period up to 3 days, or nighttime work lasting more than 1 hour.
c. Short-term stationary is daytime work that occupies a location for more than 1 hour, but less than 12 hours.
d. Short duration is work that occupies a location up to 1 hour.
e. Mobile is work that moves intermittently or continuously.

SIGN MOUNTING HEIGHT

1. The bottom of Long-term/Intermediate-term signs shall be at least 7 feet, but not more than 9 feet, above the paved surface.
2. The bottom of Short-term/Short Duration signs shall be a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground.
3. Long-term/Intermediate-term Signs may be used in lieu of Short-term/Short Duration signing.
4. Short-term/Short Duration signs shall be used only during daylight and shall be removed at the end of the workday.
5. Regulatory signs shall be mounted at least 7 feet, but not more than 9 feet, above the paved surface regardless of work duration.

REMOVING OR COVERING

1. When sign messages may be confusing or do not apply, the signs shall be removed or completely covered.
2. Long-term stationary or intermediate stationary signs installed on square metal tubing may be turned away from traffic 90 degrees when the sign message is not applicable. This type of sign support meets the crashworthiness standards regardless of the direction of impact. This technique may not be used for signs installed in the median of divided highways or near any intersections where the sign may be seen from approaching traffic.
3. Signs installed on skids shall not be turned at 90 degree angles to the roadway. These signs should be removed or completely covered when not required.
4. When signs are covered, the material used shall be opaque, such as heavy mil black plastic.
5. Burlap shall NOT be used to cover signs.
6. Duct tape or other adhesive material shall NOT be affixed to a sign face. These materials can damage the retroreflectivity of sign sheeting.
7. Signs shall be removed upon completion of the work.

SIGN SUPPORT WEIGHTS

1. Where sign supports require the use of weights to keep from turning over, the use of sandbags with dry, cohesionless sand is recommended.
2. The sandbags will be tied shut to keep the sand from spilling and to maintain a constant weight.
3. Rock, concrete, iron, steel or other solid objects will not be permitted for use as sign support weights.
4. Sandbags should weigh a minimum of 35 lbs and a maximum of 50 lbs.
5. Sandbags shall be made of a durable material that tears upon vehicular impact.
6. Rubber (such as tire inner tubes) shall NOT be used for sandbags.
7. Rubber ballasts (such as those used with cones or edgeline channelizers) shall NOT be used as sign support weights.
8. Sandbags shall only be placed along or laid over the base supports of the traffic control device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners. Sandbags shall be placed along the length of the skids to weigh down the sign support.
9. Sandbags shall NOT be placed under the skid and shall not be used to level sign supports placed on slopes.

Only pre-qualified products shall be used. A copy of the "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources and may be obtained by contacting:

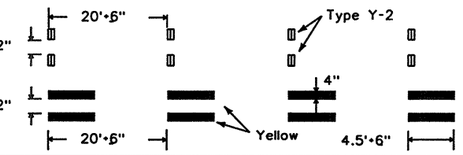
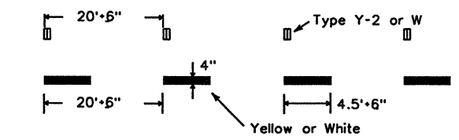
WORK ZONE SHORT TERM PAVEMENT MARKINGS DETAILS

SOLID LINES

DOUBLE NO-PASSING LINE

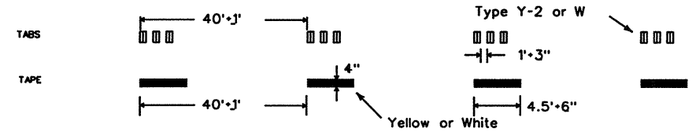


SINGLE NO-PASSING LINE or CHANNELIZATION LINE



BROKEN LINE

(FOR CENTER LINE OR LANE LINE.)



NOTES:

1. Short term pavement markings may be prefabricated markings (stick down tape) or temporary flexible-reflective roadway marker tabs unless otherwise specified elsewhere in plans.
2. Short term pavement markings shall NOT be used to simulate edge lines.
3. Dimensions indicated on this sheet are typical and approximate. Variations in size and height may occur between markers or devices made by manufacturers, by as much as 1/4 inch, unless otherwise noted.
4. Temporary flexible-reflective roadway marker tabs will require normal maintenance replacement when used on roadways with an ADT per lane of up to 7500 vehicles with no more than 10% truck mix. When roadways exceed these values, additional maintenance replacement of devices should be planned.
5. No segment of roadway open to traffic shall remain without permanent pavement markings for a period greater than 14 calendar days. The Contractor will be responsible for maintaining short term pavement markings until permanent pavement markings are in place. When the Contractor is responsible for placement of permanent pavement markings, no segment of roadway shall remain without permanent pavement markings for a period greater than 14 calendar days unless weather conditions prohibit placement. Permanent pavement markings shall be placed as soon as weather permits.
6. For two lane, two-way roadways, DO NOT PASS signs shall be erected to mark the beginning of sections where passing is prohibited and PASS WITH CARE signs shall be erected to mark the beginning of sections where passing is permitted. Signs shall be in accordance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) and may be used to indicate the limits of no-passing zones for up to 14 calendar days. Permanent pavement markings should then be placed.
7. For low volume two lane, two-way roadways of 4000 ADT or less, no-passing lines may be omitted when approved by the Engineer. DO NOT PASS and PASS WITH CARE signs shall be erected (see note 6).

TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS (TABS)

1. Temporary flexible-reflective roadway marker tabs detailed on this sheet will be designated Type Y-2 (two amber reflective surfaces with yellow body); Type Y (one amber reflective surface with yellow body); and Type W (one white or silver reflective surface with white body). Additional details may be found on BC(10).
2. Tabs shall meet requirements of Departmental Material Specification DMS-8242.
3. When dry, tabs shall be visible for a minimum distance of 200 feet during normal daylight hours and when illuminated by automobile low-beam head light at night, unless sight distance is restricted by roadway geometrics.
4. No two consecutive tabs nor four tabs per 1000 feet of line shall be missing or fail to meet the visual performance requirements of Note 3.

REMOVABLE - PREFABRICATED PAVEMENT MARKINGS

1. Removable prefabricated pavement markings shall meet the requirements of DMS-8241. A list of prequalified products can be found at the following web site:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/pavemark.pdf

NON REMOVABLE - PREFABRICATED PAVEMENT MARKINGS

1. Non-removable prefabricated pavement markings (foil back) shall meet the requirements of DMS-8240 or the TXDOT Purchase Specification No. 550-74-89. A list of prequalified products and a copy of the TXDOT Purchase Specifications can be found at web sites:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/pavement.pdf
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/tss/tss377.pdf

RAISED PAVEMENT MARKERS

1. All raised pavement markers used for work zone markings shall meet the requirements of Item 672, "RAISED PAVEMENT MARKERS" and Departmental Material Specification DMS-4200.
2. A list of prequalified reflective raised pavement markers can be found at the following web site:
   ftp://ftp.dot.state.tx.us/pub/txdot-info/gsd/pdf/dms4200preq.pdf

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.
