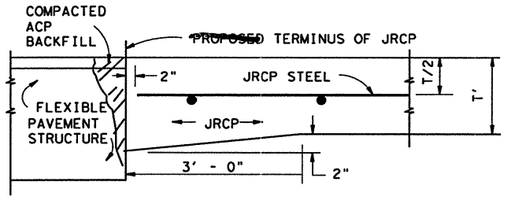
DETAIL FOR JUNCTURE WITH FLEXIBLE TYPE PAVEMENT STRUCTURE

NOTE: ADDITIONAL CONCRETE FOR THICKENED EDGE ~~SHALL~~ BE CONSIDERED INCIDENTAL TO VARIOUS BID ITEMS, DISTURBED MATERIAL IN THE FLEXIBLE PAVEMENT ~~WILL BE~~ BACKFILLED WITH ACP. THIS ACP ~~WILL~~ BE CONSIDERED INCIDENTAL TO VARIOUS BID ITEMS.

JUNCTURE A- CRCP WITH FLEXIBLE PAV.



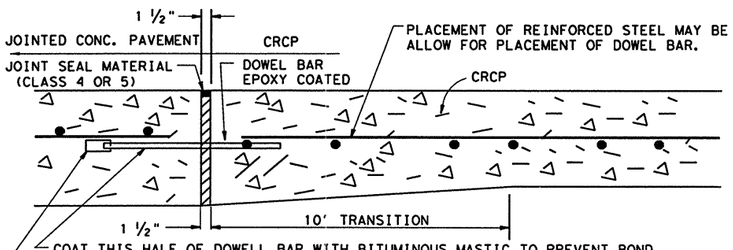
DETAIL FOR JUNCTURE WITH FLEXIBLE TYPE PAVEMENT STRUCTURE

NOTE: ADDITIONAL CONCRETE FOR THICKENED EDGE ~~SHALL BE~~ CONSIDERED INCIDENTAL TO VARIOUS BID ITEMS, DISTURBED MATERIAL IN THE FLEXIBLE PAVEMENT ~~WILL BE~~ BACKFILLED WITH ACP. THIS ACP ~~WILL BE~~ CONSIDERED INCIDENTAL TO VARIOUS BID ITEMS.

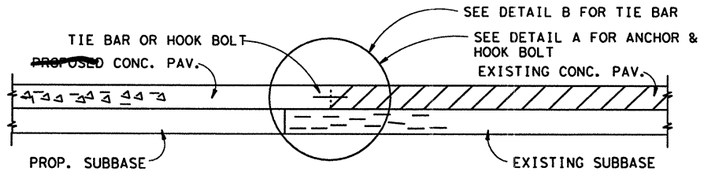
JUNCTURE B - JRCP WITH FLEXIBLE PAV.

DOWEL BAR DATA			
SLAB THICKNESS	8"	9"	10" THRU 15'
DOWEL SIZE	1"	1 1/8"	1 1/4"
DOWEL LENGTH	18"	20"	22"
DOWEL BAR SPACING	12"	12"	12"

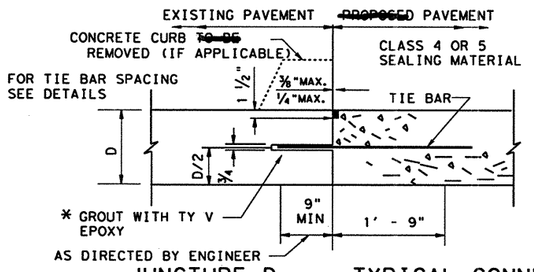
TABLE A - DOWEL BAR DATA



DETAIL "B" - DOWEL ASSEMBLY AT EXPANSION JOINT

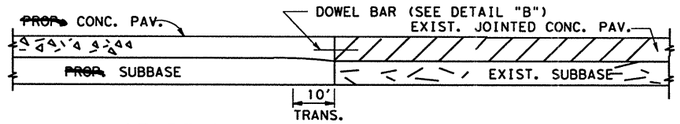


JUNCTURE C - UNIFORM DEPTH CONCRETE CRCP WITH CRCP (HOOK BOLT) OR CRCP WITH JRCP OR JRCP WITH JRCP

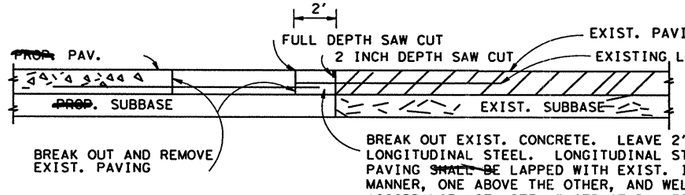


JUNCTURE D - TYPICAL CONNECTION TO EXISTING CONCRETE

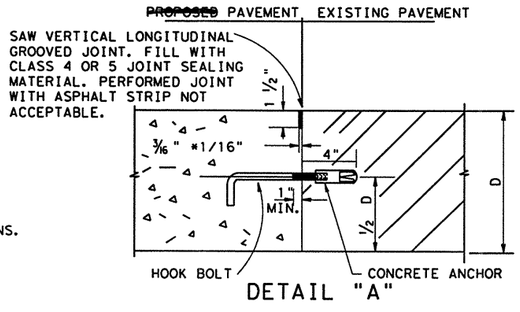
* TY VII EPOXY MAY BE REQUIRED IF, IN THE OPINION OF THE ENGINEER, TY V IS TOO FLUID



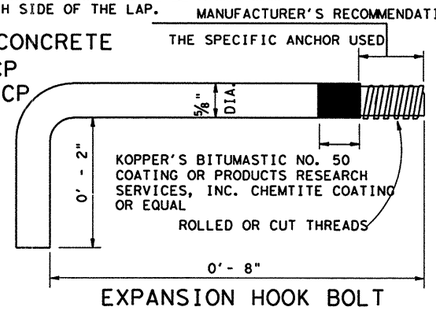
JUNCTURE E - VARIABLE DEPTH CONCRETE CRCP WITH JRCP



JUNCTURE F - "BREAK BACK" CONCRETE CRCP WITH CRCP OR JRCP WITH JRCP



DETAIL "A"



EXPANSION HOOK BOLT

GENERAL NOTES

1. FOR FURTHER INFORMATION REGARDING THE PLACEMENT OF CONCRETE AND REINFORCEMENT REFER TO THE GOVERNING SPECIFICATION FOR CONCRETE PAVEMENT.
2. THE DESIGN REQUIREMENTS FOR THE PAVEMENT STRUCTURE, I.E. BAR SPACING, BAR SIZE LAP REQUIREMENTS, ETC., ~~SHALL~~ BE AS SHOWN ON THE APPROPRIATE PAVEMENT DESIGN DETAIL.
3. SLEEPER SLAB AND ADDITIONAL REINFORCING REQUIRED HEREON ~~SHALL~~ BE CONSIDERED INCIDENTAL TO THE VARIOUS BID ITEMS.
4. WHERE USED THE SIZE, SPACING AND LENGTH OF DOWEL BARS ~~SHALL~~ BE AS SHOWN IN TABLE "A".
5. WHERE THERE IS TO BE A JUNCTURE AND ADDITIONAL JRCP PAVING IS ~~TO BE~~ PLACED AT A FUTURE DATE, MULTIPLE PIECE DOWEL WILL BE PERMITTED AT THE JUNCTURE. THE MULTIPLE PIECE DOWEL BAR ASSEMBLIES ~~SHALL~~ HAVE A MINIMUM ULTIMATE TENSILE STRENGTH OF 50.0 KIPS AND ~~SHALL~~ BE SMOOTH EPOXY COATED BARS. THE MULTIPLE PIECE DOWEL BAR ASSEMBLIES ~~SHALL~~ HAVE A STOP TYPE COUPLINGS AND ~~SHALL~~ HAVE ROLLED THREADS ON THE BARS. THE BAR ~~SHALL~~ BE DISMANTLED AND THE COUPLING PORTION USED IN CONSTRUCTION ~~SHALL~~ BE FITTED WITH A PLASTIC CAP. THE REMAINING PORTION OF THE BAR ~~SHALL~~ BE FURNISHED TO THE ENGINEER.
6. WHERE THE PAVING IS CRCP AND A RAMP COMPOSED OF A FLEXIBLE PAVEMENT IS ~~TO BE~~ USED AT THE JUNCTURE UNTIL FUTURE PAVING IS CONSTRUCTED, MULTIPLE PIECE TIE BARS ~~MAY BE~~ USED IF PERMITTED BY THE ENGINEER. IF USED, THE MULTIPLE PIECE TIE BAR ASSEMBLIES ~~SHALL~~ HAVE STOP TYPE COUPLINGS AND ~~SHALL~~ HAVE ROLLED THREADS ON THE BARS. THE MULTIPLE PIECE TIE BAR ASSEMBLIES ~~SHALL~~ DEVELOP A MINIMUM ULTIMATE TENSILE STRENGTH EQUAL TO 1-1/2 TIMES THE YIELD STRENGTH OF THE TRANSVERSE BARS BEING JOINED. TIE BARS ~~SHALL~~ BE DEFORMED, REINFORCING BARS. TIE BAR ASSEMBLIES MADE FROM STEELS OTHER THAN ASTM GRADE 60 AND WITH DEFORMATIONS OTHER THAN ASTM STD. ~~MAY BE~~ USED PROVIDED THEY ~~CAN BE~~ PROVEN TO THE SATISFACTION OF THE ENGINEER THAT THEY ARE IN EVERY RESPECT THE EQUAL OF THE ASSEMBLIES SPECIFIED. LABORATORY TESTING OF THE PROPOSED ASSEMBLIES, AT THE CONTRACTOR'S EXPENSE, ~~MAY BE~~ REQUIRED. ONE PORTION OF THE TIE BAR ASSEMBLY(S) ~~SHALL~~ BE LAPPED AND WELDED TO EACH LONGITUDINAL BAR IN ACCORDANCE WITH ITEM "STRUCTURAL FIELD WELDING," THE OTHER PORTION INTO THE COUPLING PRIOR TO PAVING. MULTIPLE PIECE TIE BAR LENGTHS ~~SHALL~~ CONFORM TO THE TIE BAR LENGTHS SHOWN ELSEWHERE IN THE PLANS. ADDITIONAL "SHEAR STEEL" ~~WILL~~ ALSO BE REQUIRED AND ~~MAY BE~~ USED WITH MULTIPLE PIECE ASSEMBLIES AS PREVIOUSLY DESCRIBED. THE ADDITIONAL STEEL BARS ~~WILL BE~~ OF EQUAL DIAMETER AT A SPACING, DOUBLE THAT OF THE LONGITUDINAL STEEL AND THE LONGITUDINAL STEEL AND THE LENGTH ~~SHALL~~ BE 66 TIMES THE TIE BAR DIAMETER
7. SHEAR CUTTING DOWEL BARS IS PROHIBITED.
8. DOWEL BAR EPOXY COATING ~~SHALL~~ CONFORM TO ARTICLE 440.9 "EPOXY COATING OF REINFORCING STEEL."
9. ANY LONGITUDINAL REINFORCING WHICH IS OR HAS BEEN BENT ~~SHALL~~ BE REPLACED. IF THERE IS NOT SUFFICIENT EXPOSED REINFORCING TO PROVIDE A MINIMUM OF A 33 BAR DIAMETER LAP THAN THE EXISTING PAVEMENT ~~SHALL BE~~ REMOVED AND THE EXISTING REINFORCING SUFFICIENTLY EXPOSED TO PROVIDE A 33 BAR DIAMETER LAP ANY SHEAR BARS THAT ARE DISTURBED ~~SHALL BE~~ REPLACED BY DRILLING AND GROUTING AS REQUIRED BY NOTE 12 ON SHEET BELOW. THE CONTRACTOR ~~SHALL~~ BEAR THE ENTIRE EXPENSE FOR THIS CORRECTIVE ACTION.
10. TIE BARS AND DOWEL BARS OMITTED, LOST OR DAMAGED ~~SHALL BE~~ REPLACED BY DRILLING AND EPOXY GROUTING AT THE CONTRACTOR'S EXPENSE.
11. JUNCTURES A & B ARE ONLY SUITABLE FOR MINOR STREETS WITH LOW ADT'S, OTHERWISE THE ~~PROPOSED~~ CONCRETE PAVEMENT MUST BE ANCHORED PRIOR TO THE TERMINUS.
12. ADDITIONAL SHEAR BARS (DIAMETER "D") ~~SHALL BE~~ THE SAME SIZE AS LONGITUDINAL BARS AND ~~SHALL BE~~ SPACED MIDWAY BETWEEN ALTERNATE LONGITUDINAL BARS ALONG THE TRANSVERSE CONSTRUCTION JOINT FORMED AT THE LEAVE-OUT.

TABLE NO. 2 ALLOWABLE PAVEMENT WIDTH (W) IN FT.
FOR TRANSVERSE BAR SPACING (Bs) NOT SHOWN USE FORMULAE.

SLAB THICKNESS	8"	9"	10"	11"	12"	13"
#5 BAR AT 36"	62	55	50	45	41	38
#5 BAR AT 24"	93	83	74	68	62	57
#6 BAR AT 36"	88	78	70	64	59	54
#6 BAR AT 24"	126	117	105	96	88	81

TRANSVERSE STEEL AND TIEBAR SPACINGS SHALL BE BASED ON THE FOLLOWING FORMULAE.

FOR #5 BARS $W = \frac{17857\ N}{T\ Bs}$ FOR #6 BARS $W = \frac{25346\ N}{T\ Bs}$

W - ALLOWABLE WIDTH OF PAVEMENT SLAB WIDTH IN FEET (MEASURED EDGE TO EDGE OR EDGE TO UNTIED JOINT)
N - NUMBER OF LAYERS OF STEEL (1 OR 2)
T - THICKNESS OF SLAB IN INCHES
Bs - BAR SPACING IN INCHES

MAXIMUM Bs = 36"
MINIMUM Bs = 12"

GENERAL NOTES

1. FOR FURTHER INFORMATION REGARDING THE PLACEMENT OF CONCRETE AND REINFORCEMENT, REFER TO THE GOVERNING SPECIFICATIONS FOR "CONCRETE" AND "REINFORCING STEEL."
2. LONGITUDINAL AND TRANSVERSE BARS SHALL BE DEFORMED STEEL CONFORMING TO ASTM A-615 (GRADE 60) OR ASTM A-616 (GRADE 60).
3. DETAILS FOR PAVEMENT WIDTH, PAVEMENT THICKNESS AND THE CROWN CROSS-SLOPE SHALL BE SHOWN ELSEWHERE IN THE PLANS.
4. SPLICES SHALL BE A MINIMUM OF 33 TIMES THE NOMINAL STEEL DIAMETER.
5. CONSOLIDATION WITH HAND-MANIPULATED MECHANICAL VIBRATORS IS REQUIRED ADJACENT TO ALL TRANSVERSE CONSTRUCTION JOINTS.
6. THE DETAIL FOR THE JOINT SEALANT AND RESERVOIR WILL BE SHOWN IN CONCRETE PAVEMENT DETAIL, JOINT SEALANT.
7. PAVEMENT WIDTHS OF MORE THAN 16' SHALL HAVE A LONGITUDINAL JOINT (SECTION Z-Z OR Y-Y). THESE JOINTS SHALL BE LOCATED WITHIN 6" OF THE LANE LINE UNLESS THE JOINT LOCATION IS SHOWN ELSEWHERE ON THE PLANS.
8. THE SAW CUT FOR THE LONGITUDINAL JOINT SHALL BE ONE FOURTH THE SLAB THICKNESS WHEN CRUSHED LIMESTONE IS USED AS THE COARSE AGGREGATE.
9. WITHIN ANY AREA BOUNDED BY TWO FEET OF PAVEMENT LENGTH MEASURED PARALLEL TO THE CENTERLINE AND TWELVE FEET OF WIDTH MEASURED PERPENDICULAR TO THE PAVEMENT CENTERLINE, NOT OVER 33% OF THE REGULAR LONGITUDINAL STEEL SHALL BE SPLICED.
10. MULTIPLE PIECE TIEBARS SHALL BE USED AT LONGITUDINAL CONSTRUCTION JOINTS UNLESS OTHERWISE SPECIFIED IN THE PLANS.
11. FOR THE 13" SLAB THICKNESS, WHEN STANDARD DETAIL CPCR(1)-94 IS INCLUDED IN THE PLANS, THE CONTRACTOR MAY CHOOSE EITHER THE ONE OR TWO LAYER PLACEMENT OF REINFORCING STEEL UNLESS OTHERWISE SPECIFIED.

FOOTNOTE:
① WHEN MACHINE PLACING OF THE STEEL REINFORCEMENT IS USED, THE USE OF CHAIRS WILL NOT BE REQUIRED AND THE TRANSVERSE STEEL MAY BE PLACED ABOVE OR BELOW THE LONGITUDINAL STEEL. THE VERTICAL LOCATION OF THE BARS WILL BE APPROVED BY THE ENGINEER.

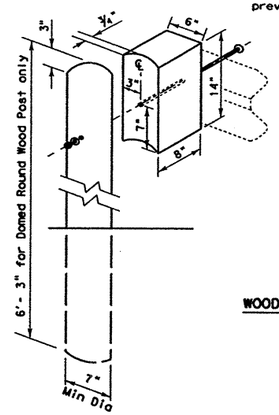
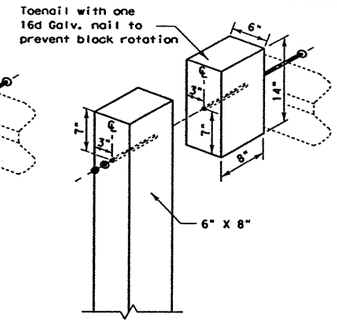
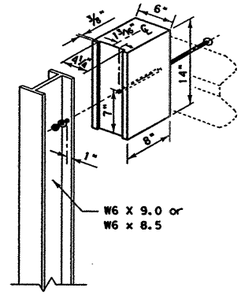
TYPICAL POST



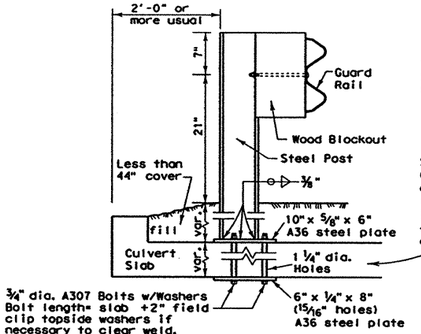
WOOD BLOCKOUT TO ROUND WOOD POST DETAIL



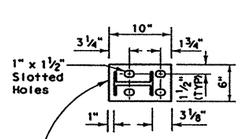
WOOD BLOCKOUT TO RECTANGULAR WOOD POST DETAIL

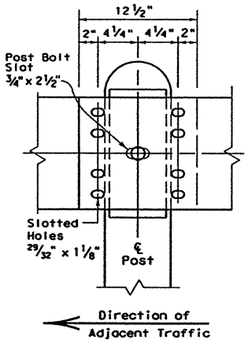


WOOD BLOCKOUT TO STEEL POST DETAIL

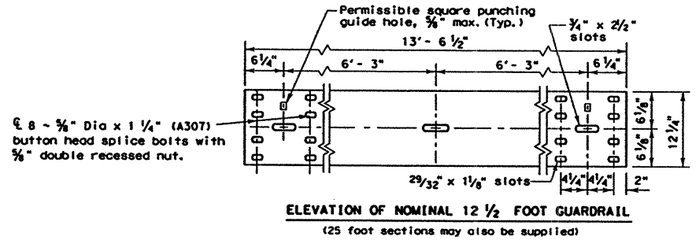


LOW FILL CULVERT POST MOUNTING OPTION





RAIL SPLICE

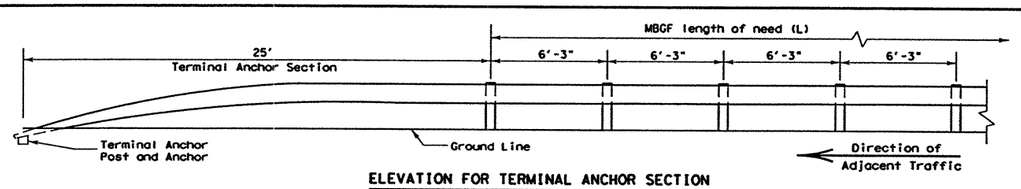


ELEVATION OF NOMINAL 12 ½ FOOT GUARDRAIL

(25 foot sections may also be supplied)

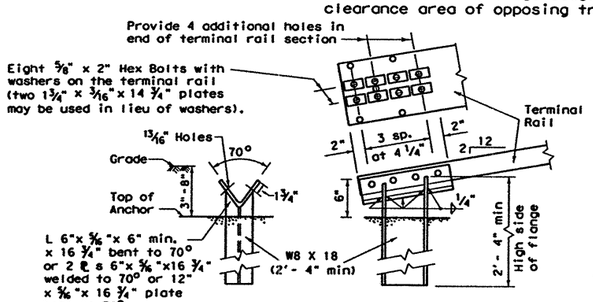
GENERAL NOTES

1. The exact position of guard fence shall be as shown elsewhere on the plans or as directed by the Engineer. Guard fence shall be transitioned to a smooth connection with other guard fence or structure railing as shown elsewhere on plans.
2. Rail element shall meet all requirements of AASHTO M-180 except as modified on the plans. The terminal connectors shall be of the same material, but shall not be less than 10 gauge.
   Contractor shall verify that the locations of bolt holes match those in the Terminal Connector prior to ordering of materials.
3. Unless otherwise shown in the plans, guard fence placed in the vicinity of curbs shall be blocked out so that the face of curb is located directly below or behind the face of the blockout. Rail placed over curbs shall be installed so that the post bolt is located approximately 21-inches above the gutter pan or roadway surface.
4. Unless otherwise shown in the plans, MBGF shall be placed with the face of rail directly above the shoulder edge (or curbface) except for upstream end treatments.
5. At the option of the Contractor, the rail elements for the guard fence may be furnished in either 12 ½ or 25 foot nominal lengths with post bolt slots for connection to posts.
6. The terminal anchor post shall be set in Class "A" concrete in (unless otherwise shown on plans) in accordance with Item, "Portland Cement Concrete". Concrete shall be subsidiary to the bid item requiring construction of the terminal rail section and anchorage system.
7. An anchor other than to a terminal anchor post shall consist of a connection similar to the rail splice or similar to the terminal connector.
8. Galvanized washers used with the eight ⅝" splice bolts and nuts that are provided for terminal connectors and/or terminal anchor posts shall be 1 ¾"x 3"x ⅜", or 1" i.d. and 2" o.d. x 0.134" (ANSI B27.2) narrow Type A plain washers.
9. Special fabrication will be required at installations having a curvature of less than 150' radius.
10. Button head post bolts (A307) shall be of sufficient length to extend through the full thickness of the nut and no more than ¾" beyond it. Button head splice bolts (A307) are ⅝"x 1 ¼" with a ⅝" double recessed nut. Fittings (bolts, nuts, and washers) shall be in accordance with Item, Metal for Structures". Fittings shall be subsidiary.
11. Crown will be widened to accommodate guard fence.
12. If guardrail is placed on a side slope away from the pavement edge, then the slope rate between the edge of the pavement and the face of the barrier will be 1V:10H or flatter.
13. Posts shall not be set full depth in concrete.
14. Where solid rock is encountered or where shown on the plans, the diameter of the holes shall be approximately 12 inches, the backfilling shall be with a cohesionless material, and embedment depth shall be 1'-6" or more as directed by the Engineer.
15. Unless otherwise directed by the Engineer, a composite material post and/or blockout from the Department approved list of suppliers may be substituted for a post and/or blockout of similar dimensions. The list of approved suppliers of posts and blockouts will be maintained by the Construction Division, TxDOT.

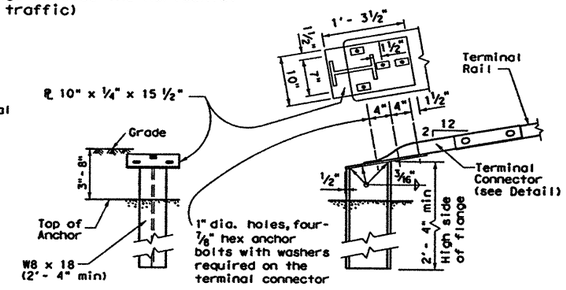


ELEVATION FOR TERMINAL ANCHOR SECTION

(Terminal anchor sections are only for downstream guardrail end anchorage usage outside the horizontal clearance area of opposing traffic)

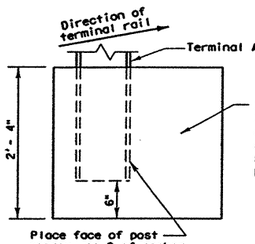


Note: This post requires four additional holes (shop or field) in the terminal rail member with eight ⅝" bolts and washer plates as shown for attachment.



Note: This optional post requires the use of the 10 ga. terminal connector with four ⅞" hex bolts for attachment to the anchor post.

TERMINAL ANCHOR POST OPTIONS



Notes:
Either post may be used with either anchor.

No construction joint is allowed in the concrete anchor.

Terminal rail may be bolted to post and in twist position prior to placing concrete anchor.

If concrete anchor is precast, the area should be compacted as directed by the Engineer, when placed in the field.

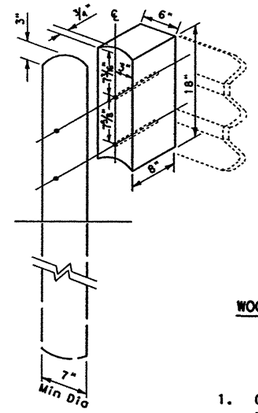
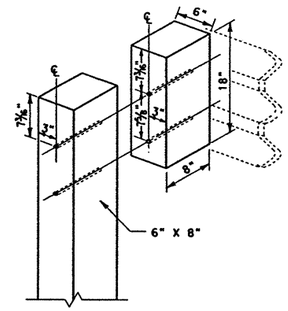
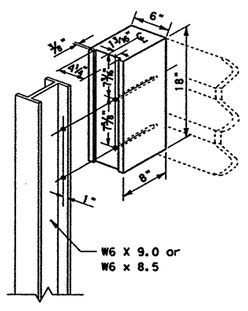
Washers (FWR03)(3"x 1 3/4"x 3/16" with 1"x 3/4" slotted hole) under the head and nut will be required for the terminal connector to nested thrie beam splice bolts for these series rails.
See typical views and T5, SSTR, HT, CTB & SSCB Series Standard Sheets for additional details.



WOOD BLOCKOUT TO ROUND WOOD POST DETAIL



WOOD BLOCKOUT TO RECTANGULAR WOOD POST DETAIL



WOOD BLOCKOUT TO STEEL POST DETAIL

GENERAL NOTES

1. Concrete curbs used in conjunction with thrie-beam guardfence transitions shall be Type II (typically 5 3/4" height above surface; see CCCG standard sheet) unless otherwise shown in the plans. If other curb heights are shown in the plans in conjunction with the transition, this curb height may be from 4" to 8" with a relatively vertical face. Concrete curbs shall be continuous to the seventh post. Any drainage cuts must be located past this post.
2. The type of post (round wood post, rectangular wood post, or steel post) will be shown elsewhere in the plans. The exact position of transitions shall be shown elsewhere in the plans or as directed by the Engineer. See MBGF standard sheet for additional details and information.
3. Rail element shall meet all requirements of AASHTO M-180 except as modified on the plans. The terminal connector and the thrie-beam transition to w-beam shall be of the same material, but shall not be less than 10 gauge.

   Contractor shall verify that the locations of bolt holes match those in the Terminal Connector prior to ordering of materials.
4. Unless otherwise shown in the plans, transitions shall be placed with the blockout face in front of or directly above the curbface.
5. Galvanized washers used with the 5/8" splice bolts and nuts that are provided for terminal connectors shall be (FWR03)(3"x 1 3/4"x 3/16" with 1"x 3/4" slotted hole).
6. Button head post bolts (A307) shall be of sufficient length to extend through the full thickness of the nut and no more than 3/4" beyond it. Button head spice bolts (A307) are 5/8" x 1 1/4" with a 5/8" double recessed nut. Galvanized fittings (bolts, nuts, and washers) shall be in accordance with Item, "Metal For Structures". Fittings shall be subsidiary to the bid item requiring construction of transition.
7. Crown will be widened to accommodate transitions.
8. Where solid rock is encountered or where shown on the plans, the diameter of the holes shall be approximately 12 inches, the backfilling shall be with a cohesionless material, and embedment depth shall be 1'- 6" or more as directed by the Engineer.
9. Posts shall not be set full depth in concrete.
10. Unless otherwise directed by the Engineer, a composite material post and/or blockout from the Department approved list of suppliers may be substituted for a post and/or blockout of similar dimensions. The list of approved suppliers of posts and blockouts will be maintained by the Construction Division, TxDOT.
11. Refer to MBGF Standard Sheet for additional details.

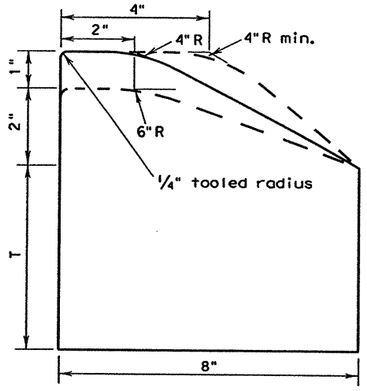
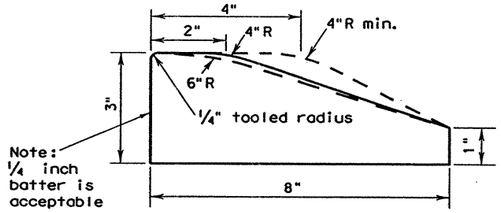
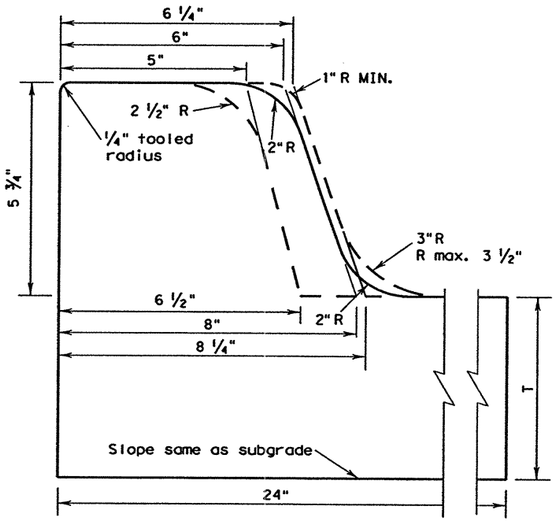
TYPE I CURB AND GUTTER



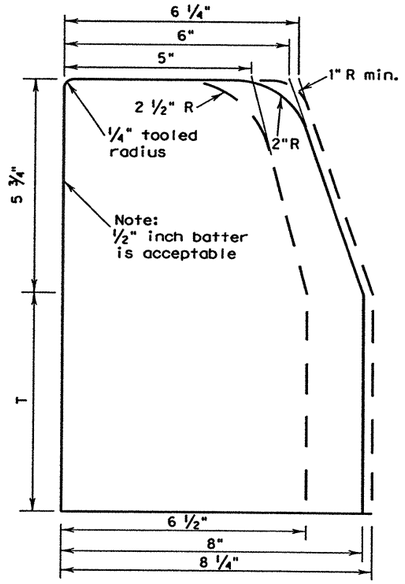
TYPE I CURB



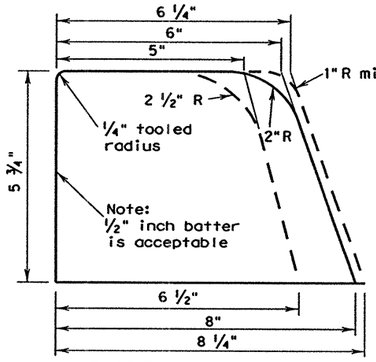
TYPE I MONO CURB OR
CURB PLACED ON PAVEMENT



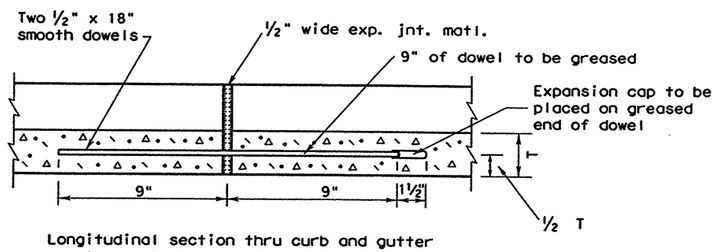
TYPE II CURB AND GUTTER



TYPE II CURB



TYPE II MONO CURB OR
CURB PLACED ON PAVEMENT



Longitudinal section thru curb and gutter showing typical expansion joint details.

Reinforcing steel (when used) shall not cross expansion joints. Steel shall be terminated 3" ± 1" from face of the joint.

GENERAL NOTES

1. Contractor may use existing forms if the cross section lies within the band shown by dotted lines. If new forms are to be purchased, leased, or constructed they shall conform to the solid line.
2. When reinforcing steel is required or placed at contractor's option, one of the following schemes of reinforcement shall be required. The manner of placement and location shall be to the satisfaction of the Engineer.
   a. Type I, or Type II, curb and gutter reinforcement shall have longitudinal reinforcing bars as follows: Three #3, two #4, two #5, or one #6.
   b. All types of curb (reinf.) shall have one #3 or #4 bar for for longitudinal reinforcement.
3. Reinforcing bars shall be lapped a minimum of 15".
4. When curb or curb and gutter is placed by a separate pour adjacent to or atop concrete pavement, curb or curb and gutter shall be tied to pavement in a manner satisfactory to the engineer with 8-inch long #3 or #4 bars spaced at 5 feet and expansion and/or contraction joints of curb or curb and gutter shall match those of pavement.

   When curb and curb and gutter is not constructed adjacent to concrete pavement, the following shall govern:
   a. Reinforced curb or curb and gutter shall have no contraction joints.
   b. Non-reinforced curb or curb and gutter shall have formed, tooled or sawed contraction joints at 10'±. The depth of these joints shall be sufficient to ensure cracking at the joints.
   c. Reinforcing curb or curb and gutter shall have expansion joints at points of curvature and at intervals no greater than 120' in all curves and at structures such as bridges, box culverts, curb inlets, etc.
   d. Non-reinforced curb or curb and gutter shall have expansion joints at points of curvature on curves of radius less than 25' and at structures such as bridges, box culverts, curb inlets, etc.
5. One-half inch expansion joint material shall be provided where curb or curb gutter is adjacent to sidewalk or riprap.
6. Unless otherwise shown, transitions between curbs or curbs and gutters of differing cross section shall be accomplished over a 20 foot length or as approved by the Engineer.
7. At contractor's option, dimension "T" may be thickness of pavement structure. In no case shall it be less than 6".
8. See the RAMP standard sheet for information on curb ramps and sidewalks crossing driveways.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

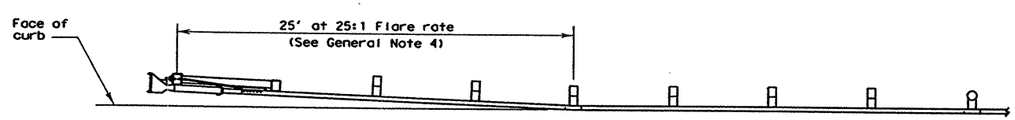
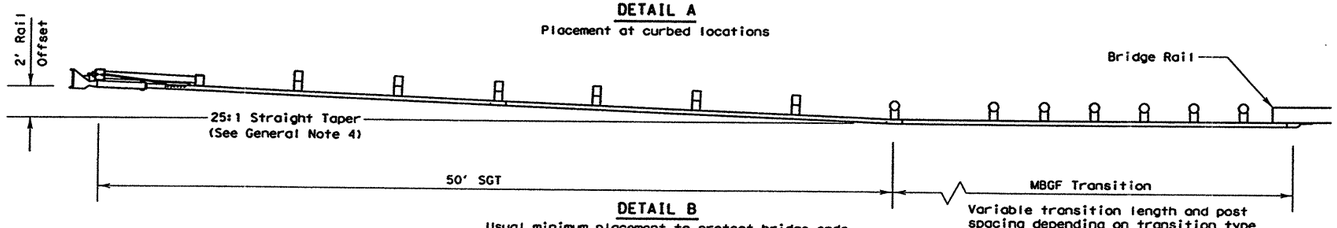
POST & TUBE OPTIONS			
Type I	Posts	①	thru ②
Type II	Posts	①	thru ④
Type III	Posts	①	thru ⑧



DETAIL A
Placement at curbed locations



DETAIL B
Usual minimum placement to protect bridge ends

Variable transition length and post spacing depending on transition type

R = Radius
D = Diameter

GENERAL NOTES

1. The type of SGT unit will be specified elsewhere in the plans. (Numbers in circles indicate post position.)

Post & Tube Options				Post Only			
Type I	Posts	①	thru ②	Posts	③	thru	⑧
Type II	Posts	①	thru ④	Posts	⑤	thru	⑧
Type III	Posts	①	thru ⑧	None			

2. Wood posts are required with this guardrail end treatment.
3. All bolts, nuts, cable assemblies, cable anchors, steel tubes & bearing plates shall be galvanized.
4. For non-curb installations, the MBGF will be flared at a rate of 25:1 over the first 50 foot of the system to prevent the terminal head from encroaching on the shoulder. The flare may be decreased or eliminated for specific installations if directed by the Engineer. A 25:1 flare rate will be used at curb sections, beginning at post number 5 and ending at post number one.
5. The steel tubes shall not protrude more than 4 inches above ground. Site grading may be necessary to meet this requirement.
6. The steel tubes may be driven with an approved driving head. They shall not be driven with the wood post in the tube. If the steel tubes are placed in drilled holes, the backfill material must be satisfactorily compacted to prevent tube settlement.
7. When rock excavation is encountered, a 12 inch diameter post hole, 20 inches deep may be used if approved by the Engineer. Granular material will be placed in the bottom of the hole approximately 2 ½ inches deep to provide drainage. The steel tube sleeves will be field cut to 20 inches in length, placed in the hole and backfilled with adequately compacted material excavated from the hole.
8. The breakaway cable assembly must be taut. A locking device, (vice grips or channel lock pliers) should be used to prevent the cable from twisting when tightening the nuts.
9. The wood blockouts shall be "toe nailed" to the rectangular wood posts to prevent them from turning when the wood shrinks.
10. For curb installations, the soil tubes and posts shall be installed at the proper ground elevation behind the curb. The posts will then require field drilling new holes to accommodate the rail to post connection bolt to maintain the proper height of the rail above the gutter pan. The excess post length above the rail will be removed if directed by the Engineer.
11. An object marker shall be installed on the front of the impact head as detailed on D&OM(VIA).
12. A special site evaluation should be considered, prior to using this end treatment where there is less than 25 feet between the extrusion side of the end treatment and any adjacent driving lane.

EXPANSION JOINT DETAIL A

FOR THE CONTRACTOR INFORMATION QUANTITIES WERE CALCULATED USING THE FOLLOWING :

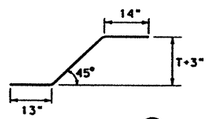
DEFINITION OF TERMS

W = THE WIDTH OF THE SLAB IN FEET
S = ANGLE OF SKEW IN DEGREES

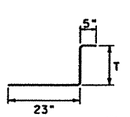
A_{BAS} = AREA OF BRIDGE APPROACH SLAB (S.Y.)

$$A_{BAS} = \frac{20W + \frac{W^2 \tan S}{2}}{9}$$

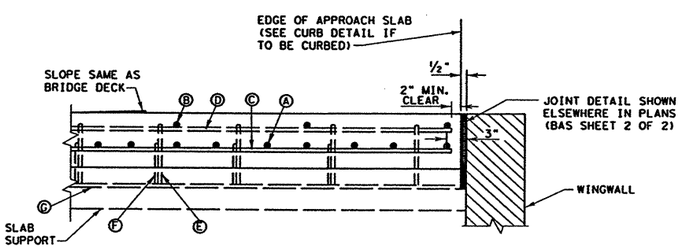
TABLE FOR STEEL QUANTITIES
STEEL POUNDS
38.0/S.Y. OF BAS
9.5/FT. OF SUPPORT SLAB



BAR DETAIL Ⓔ



BAR DETAIL Ⓕ



TYPICAL SECTION B-B

GENERAL NOTES

1. THE APPROACH SLAB SHALL HAVE THE SAME TRANSVERSE CROWN THROUGHOUT ITS LENGTH AS THE STRUCTURE WHICH IT ADJOINS.
2. ALL REINFORCEMENT BARS ON THIS STANDARD SHALL BE NUMBER 5 BARS. REINFORCING STEEL SHALL CONFORM TO ASTM DESIGNATION A-615, GRADE 60 OR A-616, GRADE 60. WHERE BENDING OF THE STEEL IS REQUIRED A-615, GRADE 60 SHALL BE USED.
3. ADDITIONAL DETAILS FOR POSSIBLE CURB AND GUTTER AND LONGITUDINAL JOINTS ARE SHOWN ON SHEET 2 OF 2 OF THIS STANDARD DRAWING.

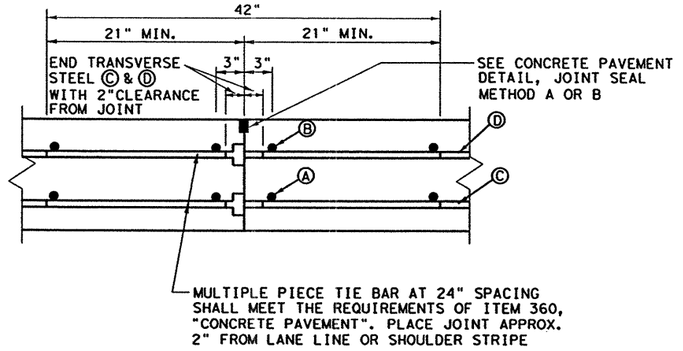
CONTROLLED LONGITUDINAL JOINT DETAIL

THE TOP JOINT MAY BE SAWED PROVIDED A LIGHT WEIGHT SAW IS USED WITHIN 6 HOURS OF PLACEMENT. A DRY SAWING OPERATION SHALL BE USED. THE SAW CUT SHALL BE LESS THAN 3/16" WIDE.

THE CHAMFER SHALL BE PLACED TO BE APPROXIMATELY MIDWAY BETWEEN THE LONGITUDINAL BOTTOM-STEEL. A REFERENCE LINE SHALL BE ESTABLISHED TO INSURE THAT THE INSERT OR SAW CUT IS DIRECTLY ABOVE THE CHAMFER. MINOR ADJUSTMENT IN THE A AND B BARS SPACINGS MAY BE REQUIRED TO INSURE THAT THE JOINT WILL BE APPROXIMATELY 2" FROM THE LANE LINE AND NOT ABOVE A REINFORCING BAR.



LONGITUDINAL CONSTRUCTION JOINT DETAIL

GENERAL NOTES

1. TIEBARS AT CONSTRUCTION JOINTS SHALL MEET THE REQUIREMENTS OF ITEM 360, "CONCRETE PAVEMENT."
2. IF A CURB IS USED ON THE STRUCTURE, A CURB WITH HEIGHT AND INSIDE FACE MATCHING THE STRUCTURE CURB SHALL BE USED ON THE APPROACH SLAB. THE CURB SHOULD TAPER TO A TWO INCH HEIGHT AND BE TERMINATED AT THE END OF THE SLAB OR AT THE DRAINAGE GUTTER, IF A DRAINAGE GUTTER IS USED.
3. DETAILS AND QUANTITIES FOR CURB ARE TO BE AS SHOWN ELSEWHERE IN THE PLANS.
4. TYPE I GUTTER SHOULD BE USED IN LIEU OF TYPE II GUTTER WHEN SPACE PERMITS.
5. WHEN STAGE CONSTRUCTION IS USED TO BUILD A PORTION OF A BRIDGE, THE LONGITUDINAL CONSTRUCTION JOINTS OF THE APPROACH SLAB SHALL ALIGN WITH THE LONGITUDINAL CONSTRUCTION JOINTS OF OF THE BRIDGE STRUCTURE.
6. ALL REINFORCEMENT STEEL ON THIS STANDARD SHEET SHALL BE NUMBER 5 (#5) BARS.

SHORTRACC	45 or less	14'-1"	15'-1" 16'-1" 17'-1"

Concrete pad length on TRACC & SHORTRACC depends on backup type.

FOUNDATION OPTIONS
6" Reinforced Concrete
8" Unreinforced Concrete
3" Min. Asphalt over 3" Min. Concrete
6" Asphalt over 6" Compact Subbase
8" Minimum Asphalt

For steel placement in concrete foundations (See manufacturer's product manual)

BACKUP SUPPORT OPTIONS
Square Concrete Backup
Concrete Barrier (CTB) Backup
Single Slope Concrete Barrier (SSCB)
Guardrail Backup (Base-Plated Post)
Guardrail Backup (Driven Post)
TRANSITION OPTIONS
Vertical Wall
Modified (CTB) to Vertical Wall
Concrete Barrier (CTB)
Guardrail (W-Beam)
Guardrail (Thrie-Beam)

For bi-directional transition panel details (See manufacturer's product manual)

GENERAL NOTES

1. For bi-directional traffic, appropriate transition panels will be required.
2. Details of components for the TRACC and backups and reinforcing details will be shown on the manufacturer's shop drawings furnished to the Engineer.
3. Concrete shall be class "S" with a minimum compressive strength of 4,000 p.s.i.
4. If the cross-slope varies more than 2% over the length of the system, the concrete pad will require leveling. Maximum permissible cross-slope is 8%.
5. The installation area should be free from curbs, elevated objects, or depressions.
6. The TRACC system should be approximately parallel with the barrier or ℄ of merging barriers.

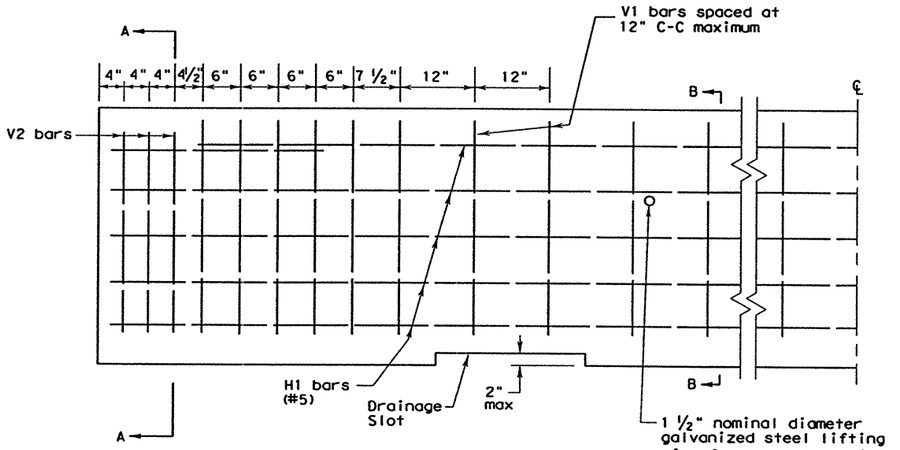
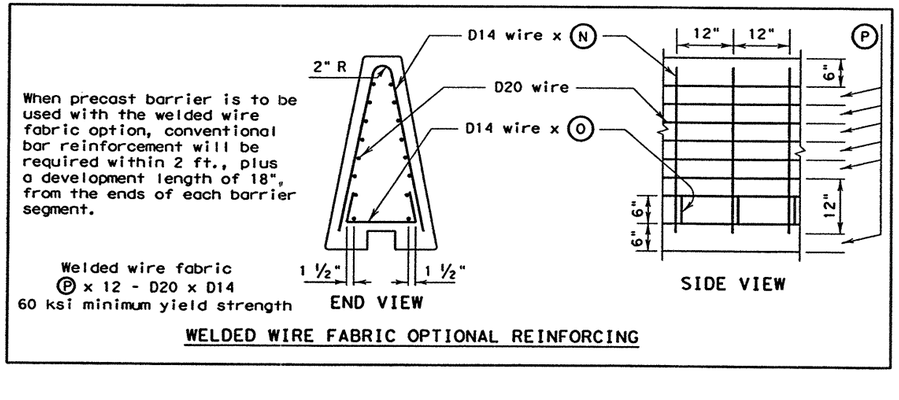
PLAN VIEW

(SYMMETRICAL ABOUTCENTER LINE)



ELEVATION

(SYMMETRICAL ABOUT CENTERLINE)



WELDED WIRE FABRIC OPTIONAL REINFORCING

GENERAL NOTES

1. Precast barrier length shall be 30 feet (±1") unless otherwise specified in the plans. Cast-in-place or slip-formed barrier shall have an intermediate barrier joint at a maximum spacing of 100 feet unless otherwise directed by the Engineer. Refer to the intermediate barrier joint detail. Cast-in-place or slip-formed barrier will have the vertical V1 bars placed at 12" C-C maximum except near joints. The narrower vertical bar spacing at the ends of each barrier segment, as shown in the elevation view, will be required at the joints. The V2 bars shown in the elevation view will be replaced by V1 bars for cast-in-place or slip-form construction.
2. The usual temporary installation will require the placement of the rebar grid in the ungrouted slot. The usual permanent installation using precast barrier will connect the barrier segments with the rebar grid placed in the slot and grouted in place.
3. When installed in a permanent roadway location, the end connections of the precast barrier shall be grouted with a mixture of two parts sand and one part cement with enough water to make the mixture plastic. Grouting shall be done in a manner that will assure a smooth surface at the joint.
4. All concrete shall be class C or H, unless otherwise specified.
5. All reinforcing steel shall be Grade 60, unless otherwise specified.
6. Each precast barrier to be installed in a temporary location shall be delivered with a rebar grid.
7. Chamfer top and end edges ¾ inch.
8. Unless otherwise shown in the plans, the Contractor has the option of placing either precast or cast-in-place permanent concrete barrier. Cast-in-place barrier may be slip-formed. Additional reinforcement may be tack welded to the upper two-thirds of the reinforcing cage to provide bracing. Lifting pipe, rebar grid and slot shall be omitted for cast-in-place or slip-form construction.
9. Bar splices for roadway barrier shall be a minimum of 24 times the nominal diameter of the bar.
10. Welded wire fabric may be used as an option to conventional reinforcement for precast or cast-in-place barrier. Welded wire fabric shall be made in accordance with ASTM A 497.
11. Conduit will be provided only when called for elsewhere in the plans. The position of the conduit or conduit passageway may be adjusted to facilitate construction, subject to approval of the Engineer.
12. Transitions to barrier height, as needed, shall be determined by the Engineer. Changes in barrier height should not normally exceed 2 inches per 30 foot. Vertical steel shall be uniformly transitioned throughout the variation in barrier height as directed by the Engineer.
13. A 36 inch minimum height differential between top of barrier and top of ACP shall be required at placement in order to allow for up to 6 inches of future overlays while maintaining a 30 inch minimum future effective height of barrier. Total minimal barrier height for design is therefore dictated by allowance for future overlays plus existing stairstep dimension "S". Minimums typically rounded to 42", 48" or 54" to facilitate precasting.

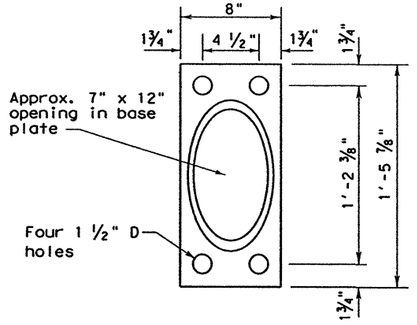
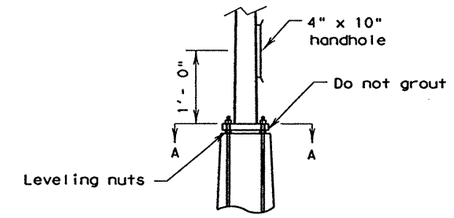
PLAN VIEW

10'-0" Cast-In-Place SSCB with anchor



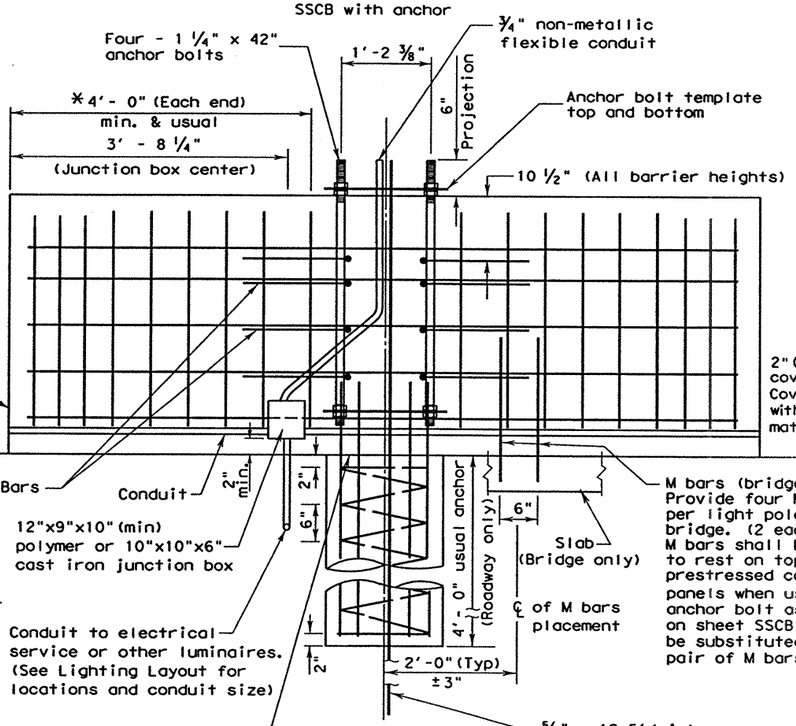
SECTION A-A

Shape of pole may be elliptical or polygonal



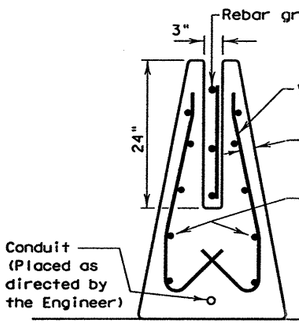
POLE DETAIL

Four 1¼" anchor bolts (ASTM A193 Grade B7 with the top threaded not less than 6 inches) or anchor rods (ASTM A321). The top end of the bolts or rods shall be galvanized not less than 8 inches and furnished with nuts (ASTM A563, Grade DH, galvanized, heavy hex) and flat and lock washers and templates. The length of the bolt or rod is specified in the table below.



ELEVATION

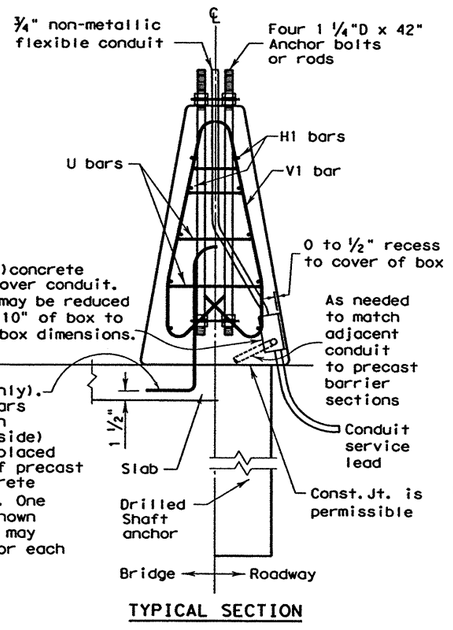
10'-0" Cast-In-Place SSCB with anchor



END SECTION

(ADJACENT TO PRECAST ROADWAY SECTIONS ONLY)

Each end of cast-in-place luminaire section shall be formed to mate with the precast concrete barrier. The cast-in-place section shall be connected at each end to the precast sections as shown above. Rebar grid and slot will be omitted when this barrier is placed on bridge or adjacent to cast-in-place roadway barrier.



TYPICAL SECTION

GENERAL NOTES

1. Poles on bridge barrier shall be grounded using a ground rod near the wing wall and grounding conductor to each pole. The 1'-6" diameter anchor shall be omitted on bridge barrier. Anchorage on bridges shall be provided using four M bars as detailed hereon.
2. Anchor bolts, ground rods, drilled shaft anchor, junction box and rigid metal conduit as shown shall not be paid for directly, but will be considered subsidiary to the various bid items.
3. Use special pole designation Roadway Illumination Assemblies. Example: (TY SP48S-8-8)(.4kW), where length of arm is 8 feet. (See RID standard)
4. All conduit bends shall be in accordance with the National Electric Code.
5. Junction box shall be cast iron or polymer concrete, and shall be mounted flush (-0,+½") with concrete surface of CTB. Cast iron boxes shall have a grounding stud or lug and shall be grounded. See ED(1) standard for types.
6. Alternate forming methods may be used only with the prior approval of the Engineer.

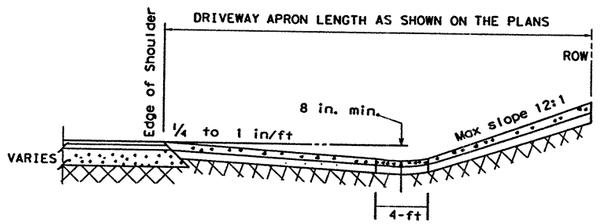
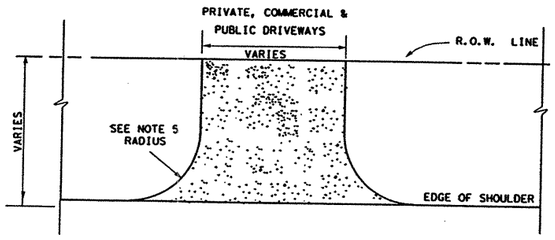
PROFILE DRIVEWAY SECTION



PROFILE DRIVEWAY SECTION (VALLEY GUTTER)



TYPICAL DRIVEWAY PLAN VIEW

DRIVEWAY NOTES:

1) A PRIVATE DRIVEWAY IS AN ENTRANCE TO AND/OR EXIT FROM A RESIDENTIAL DWELLING, FARM, OR RANCH TO A STATE HIGHWAY FOR THE EXCLUSIVE USE AND BENEFIT OF THE GRANTEE.
   A) THE WIDTH ~~SHALL~~ NOT EXCEED TWENTY-FOUR FEET MEASURED AT RIGHT ANGLES TO THE CENTERLINE OF THE DRIVEWAY, EXCEPT AS INCREASED BY PERMISSIBLE RADII. THE MINIMUM DRIVEWAY WIDTH AT ROW LINE IS 12-FT.
   B) THE ANGLE OF THE ACCESS DRIVEWAY FROM THE HIGHWAY PAVEMENT ~~SHALL BE~~ SIXTY TO NINETY DEGREES, EXCEPT THAT ONE-WAY FORTY-FIVE DEGREE ANGLE DRIVEWAYS ~~WILL BE~~ PERMITTED.
2) A COMMERCIAL DRIVEWAY IS AN ENTRANCE TO AND/OR EXIT FROM ANY COMMERCIAL, BUSINESS, OR SIMILAR TYPE ESTABLISHMENT ADJACENT TO A STATE HIGHWAY.
   A) THE WIDTH OF ACCESS DRIVEWAYS ~~SHALL NOT~~ EXCEED FORTY-FIVE FEET MEASURED AT RIGHT ANGLES TO THE CENTERLINE OF THE DRIVEWAYS, EXCEPT AS INCREASED BY PERMISSIBLE RADII. THE MINIMUM DRIVEWAY WIDTH AT ROW LINE IS 12-FT.
   B) THE ANGLE OF THE ACCESS DRIVEWAY FROM THE HIGHWAY PAVEMENT ~~SHALL BE~~ SIXTY TO NINETY DEGREES, EXCEPT THAT ONE-WAY ENTRANCES FROM DIVIDED LANE HIGHWAY OR ONE-WAY FRONTAGE ROADS ~~MAY BE~~ THIRTY DEGREES TO NINETY DEGREES.
3) PUBLIC ACCESS DRIVEWAYS ARE APROACHES TO A STATE HIGHWAY FROM COUNTY OR CITY MAINTAINED ROADS AND STREETS, AND APPROACHES TO SCHOOL, CHURCHES, CEMENTERIES, AND OTHER PUBLIC PLACES OR BUILDINGS OF A LIKE CHARACTER.
   A) THE WIDTH AND ANGLE OF PUBLIC ACCESS DRIVEWAYS (CITY STREETS, COUNTY ROADS, SUBDIVISION STREETS, ETC.) ~~MAY~~ VARY DEPENDING ON LOCAL CONDITIONS AND ARE SUBJECT TO REVIEW AND APPROVAL OF TXDOT.
4) THE GRADE ON THE DRIVEWAY ~~SHALL BE~~ SO CONSTRUCTED AS TO CONFORM TO THE SLOPE OF THE ROADWAY SHOULDER FROM THE EDGE OF THE TRAVELWAY TO THE SHOULDER LINE AND HENCE ~~SHALL BE~~ SLOPED DOWNWARD AT APPROXIMATELY ONE QUATER TO ONE INCH PER FOOT FOR A DISTANCE NECESSARY TO PLACE THE LOW POINT OF THE DRIVEWAY NOT LESS THAN EIGHT INCHES BELOW THE SHOULDER ELEVATION. IF VALLEY GUTTERS ARE USED, THE LOWEST POINT OF THE GUTTER ~~SHALL BE~~ A MINIMUM OF EIGHT INCHES BELOW THE SHOULDER ELEVATION AND A VALLEY GUTTER OF AT LEAST FOUR FEET IN WIDTH MAINTAINED.
5) RADII FOR ALL ACCESS DRIVEWAYS IN URBAN AREAS ~~SHALL BE~~ NOT LESS THAN TWO AND ONE-HALF FEET, AND IN RURAL AREAS IT ~~SHALL BE~~ NOT LESS THAN TEN FEET.
6) FOR DRIVEWAYS BEING CONSTRUCTED WITHIN THE CLEAR ZONE, ALL DRAINAGE STRUCTURES (PIPE, BOX, PAVED, DIP, ETC.) SHALL BE DESIGNED ~~TO BE~~ TRAVERSABLE BY A COLLIDING VEHICLE WITHOUT ABRUPT CHANGE IN SPEED OR ROLLOVER.
   A) THERE ~~SHALL BE~~ NO CULVERT HEADWALLS OR SIMILAR VERTICAL ENDS.
   B) ENDS ~~SHALL BE~~ SLOPED AT 6:1 (6 HORIZONTAL TO 1 VERTICAL) OR FLATTER, WITH RIPRAP OR OTHER STABILIZING MATERIAL ADDED WHERE REQUIRED TO PREVENT EROSION AND/OR PROTECT THE END. THE SLOPING END ~~MAY BE~~ TERMINATED AND A VERTICAL END INTRODUCED AT THE TOP AND BOTTOM OF THE PARTIAL PIPE SECTION.
   C) THE DRIVEWAY EMBANKMENT SLOPE ~~SHALL BE~~ 6:1 MAXIMUM, WITH 8:1 PREFERRED.
   D) FOR PIPES GREATER THAN 30 INCHES IN DIAMETER OR MULTIPLE PIPES WITH INDIVIDUAL DIAMETERS GREATER THAN 24 INCHES, GRATES ~~WILL BE~~ PROVIDED WITH MAXIMUM SLOPE OF 6:1 OR A PREFERRED SLOPE OF 8:1. GRATES ARE NOT REQUIRED ON SMALL (INDIVIDUAL PIPES HAVING 30 INCHES OR LESS DIAMETER) STRUCTURES REGARDLESS OF END LOCATION WITH RESPECT TO THE CLEAR ZONE REQUIREMENTS; HOWEVER, THE ENDS OF SMALL STRUCTURES ~~SHALL BE~~ SLOPED AND RIPRAPPED AS DESCRIBED IN (B) ABOVE.
7) FOR PROPER BACKFILL REFER TO TXDOT'S STANDARD SPECIFICATIONS FOR CONSTRUCTION OF HIGHWAYS, STREETS AND BRIDGES ITEM NO. 400 "EXCALVATION AND BACKFILL FOR STRUCTURES".
8) REFER TO TXDOT'S "REGULATION FOR ACCESS DRIVEWAY TO STATE HIGHWAYS" PUBLICATION FOR ADDITIONAL DETAILS REGARDING THE DESIGN, CONSTRUCTION, AND MAINTENANCE OF DRIVEWAYS.

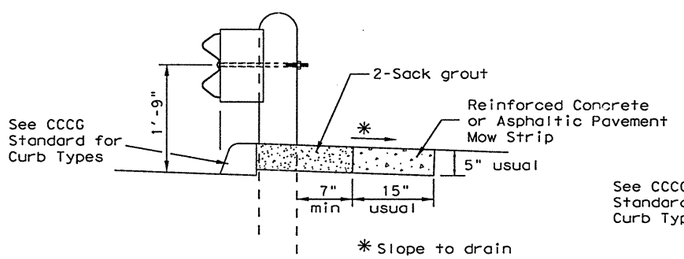
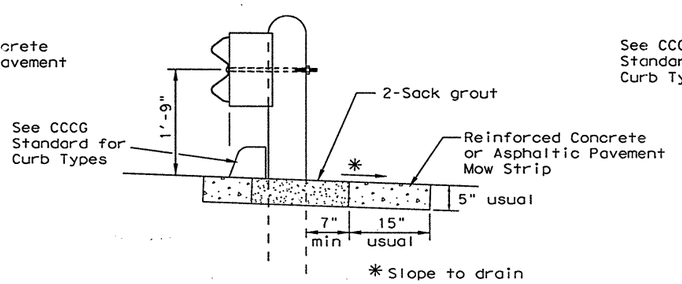
MOW STRIP DETAIL

Reinforced Concrete or Asphaltic Pavement Mow Strip with 18" x 18" or 18" dia. minimum leaveout.



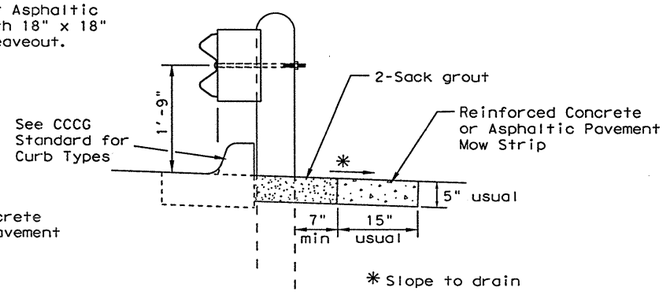
CURB OPTION (1)

Shown at curbed location



CURB OPTION (2)

Curb shown on top of mow strip



CURB OPTION (3)

GENERAL NOTES

1. Mow strips shall be asphaltic pavement or concrete riprap as shown on the plans and will be paid for under the pertinent bid item of work. Asphaltic payment shall meet the requirements of and be placed in accordance with the pertinent bid item as shown on the plans. Concrete riprap shall be placed in accordance with Item 432, "Riprap".
2. The leaveout behind the post shall be a minimum of 7".
3. The type of approved post will be shown elsewhere in the plans. See the applicable standard sheets for additional details and information.
4. Other curb placement options may be used. Curbs are not considered part of the mow strip and will be paid for under other pertinent bid item.
5. Depth of mow strip may vary, (5" usual, 8" maximum).
6. The limits of payment for asphaltic pavement or concrete riprap will include leaveouts for post.
7. The leave outs shall be filled with no more than a 2-sack grout mixture and placed in accordance with Section 421.2(8), "Mortar and Grout". Payment for furnishing and placing the grout mixture will be considered subsidiary to the pay item of asphaltic pavement or concrete riprap.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

This drawing contains information proprietary to The Reinforced Earth Company, and is being furnished for the use of TEXAS D.O.T. only in connection with this project, and the information contained is not to be transmitted to any other organization unless specifically authorized in writing by The Reinforced Earth Company. The Reinforced Earth Company is exclusive licensee in the United States under patents issued to Henri Vidal, and the furnishing of this drawing does not constitute an expressed or implied license under the Vidal patents.

The design contained on these drawings is based on information provided by the owner. On the basis of this information, The Reinforced Earth Company has designed, and is responsible for the internal stability of the structure only. External stability, including foundation (bearing capacity and settlement) and slope stability (sliding and rotation), is the responsibility of the owner.

The Reinforced Earth Company

SHEET NO. 431A

GENERAL NOTES – MSE WALL

DESIGN CRITERIA

1. DESIGN IS BASED ON THE ASSUMPTION THAT THE MATERIAL WITHIN THE REINFORCED EARTH VOLUME , METHODS OF CONSTRUCTION AND QUALITY OF PREFABRICATED MATERIALS ~~SHALL~~ CONFORM TO THE CONTRACTING AGENCY'S TECHNICAL SPECIFICATIONS.

2. SOILS CHARACTERISTICS ASSUMED FOR DESIGN:

   SELECT BACKFILL

   $\varnothing$ = 34 degrees, c = 0 p.s.f., unit weight = 125 p.c.f.

   RANDOM BACKFILL

   $\varnothing$ = 30 degrees, c = 0 p.s.f., unit weight = 125 p.c.f.

   FOUNDATION MATERIAL

   $\varnothing$ = 30 degrees, c = 0 p.s.f.

3. THE MAXIMUM APPLIED BEARING PRESSURE AT THE FOUNDATION LEVEL IS AS SHOWN ON THE WALL ELEVATION FOR EACH DESIGN CASE. IT IS THE RESPONSIBILITY OF THE OWNER TO DETERMINE THAT THIS APPLIED BEARING PRESSURE IS ALLOWABLE FOR THAT LOCATION.

4. ANY UNSUITABLE FOUNDATION MATERIAL BELOW THE REINFORCED EARTH VOLUME, AS DETERMINED BY THE ENGINEER, ~~SHALL BE~~ EXCAVATED AND REPLACED WITH SUITABLE MATERIAL OR OTHERWISE STABILIZED AS DIRECTED BY THE ENGINEER.

5. REINFORCING STRIPS FOR REINFORCED EARTH WALLS ~~SHALL BE~~ 50mm WIDE AND 4mm THICK, AND ~~SHALL~~ CONFORM TO THE PHYSICAL AND MECHANICAL PROPERTIES OF ASTM A-572 GRADE 65. GALVANIZATION ~~SHALL BE~~ APPLIED IN ACCORDANCE WITH ASTM A-123 OR AASHTO M111 ($2oz/ft^2$).

WALL CONSTRUCTION

6. STATIONS SHOWN ARE ALONG ALIGNMENTS.

7. REINFORCED EARTH WALLS IN CURVES WILL FORM A SERIES OF SHORT CHORDS OF 9.84' EACH TO MATCH DESIRED WALL ALIGNMENT.

8. FOR LOCATION AND ALIGNMENT OF THE REINFORCED EARTH WALLS, SEE CONTRACT DRAWINGS. SEE SECTIONS & DETAILS FOR THE OFF-SET BETWEEN THE CONTROL LINE AND THE FACE OF PANEL.

9. IF MANHOLES AND/OR DROP INLETS ARE PRESENT, THEY ~~SHALL BE~~ LOCATED AS SHOWN ON WALL ELEVATIONS.

10. IF PILES ARE LOCATED WITHIN THE REINFORCED EARTH VOLUME, THEY ~~SHALL BE~~ DRIVEN PRIOR TO CONSTRUCTION OF THE REINFORCED EARTH WALL UNLESS A METHOD TO PROTECT THE STRUCTURE, WHICH IS ACCEPTABLE TO THE ENGINEER AND THE REINFORCED EARTH COMPANY, AND IS PROPOSED AND APPROVED IN WRITING.

11. BACKFILL MATERIAL ~~SHALL BE~~ COMPACTED IN ACCORDANCE WITH THE SPECIFICATIONS FOR REINFORCED EARTH WALLS TO A LEVEL OF 6" (±) ABOVE THE TIE STRIPS EMBEDDED IN THE PANELS. INSTALLATION OF REINFORCING STRIPS ~~SHALL BE~~ PERMITTED ONLY AFTER PLACEMENT AND COMPACTION OF THE BACKFILL MATERIAL HAS REACHED THE REQUIRED LEVEL.

12. COMPACTION AND OPERATION EQUIPTMENT ~~SHALL BE~~ KEPT A MINIMUM DISTANCE OF 3'-0" FROM THE BACK FACE OF THE REINFORCED EARTH PANELS. COMPACTION WITHIN 3'-0" OF THE REINFORCED EARTH PANELS ~~SHALL BE~~ ACHIEVED WITH AT LEAST THREE (3) PASSES OF A LIGHTWEIGHT MECHANICAL TAMPER, ROLLER OR VIBRATORY SYSTEM.

13. IF STRUCTURES IN EXCESS OF 20' IN HEIGHT OCCUR, THE FINISHED GRADE IN FRONT OF THE WALL ~~SHALL BE~~ PLACED AND COMPACTED BEFORE WALL CONSTRUCTION EXCEEDS A HEIGHT OF 20'. FINISHED GRADE BACKFILL ~~SHALL BE~~ COMPACTED TO 95% OF ASTM D-698, METHODS "C" OR "D", UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

14. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE LOCATION OF ANY GUARDRAIL POSTS BEHIND THE REINFORCED EARTH PANELS. PRIOR TO PLACEMENT OF THE TOP LAYER OF REINFORCING STRIPS. INDIVIDUAL STRIPS MAY BE SKEWED TO AVOID THE POST LOCATIONS IF AUTHORIZED BY THE REINFORCED EARTH COMPANY. ANY DAMAGE DONE TO THE REINFORCING STRIPS DUE TO THE INSTALLATION OF THE GUARDRAIL ~~SHALL BE~~ REPAIRED BY THE CONTRACTOR AT THE CONTRACTOR'S EXPENSE.

WALL CONSTRUCTION (CON'T.)

15. IF EXISTING OR FUTURE STRUCTURES, PIPES, FOUNDATIONS OR GUARDRAIL POSTS WHICH ARE WITHIN THE REINFORCED EARTH VOLUME INTERFERE WITH THE NORMAL PLACEMENT OF REINFORCING STRIPS AND SPECIFIC DIRECTION HAS NOT BEEN PROVIDED ON THE PLANS, THE CONTRACTOR ~~SHALL~~ NOTIFY THE REINFORCED EARTH COMPANY TO DETERMINE WHAT COURSE OF ACTION SHOULD BE TAKEN.

16. ALL DETAILING AND CHECKING OF REINFORCING STEEL FOR ANY C.I.P. CONCRETE WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.

17. TOP PANELS BENEATH COPING SHALL HAVE #4 DOWELS PROTRUDING FROM THEIR TOP EDGE.

18. FOR OTHER INFORMATION PERTAINING TO WALL CONSTRUCTION PLEASE REFER TO THE REINFORCED EARTH CONSTRUCTION MANUAL.

MATERIALS NOTES

19. THE CONTRACTOR IS RESPONSIBLE FOR GRADUALLY DEFLECTING UPPER REINFORCING STRIPS DOWNWARD TO AVOID CONFLICTS WITH PAVING AND SUBGRADE PREPARATION. THE CONTRACTOR'S ATTENTION IS DIRECTED ESPECIALLY TO SITUATIONS WHERE ROADWAY SUPER ELEVATION AND/OR SOIL MIXING ARE ANTICIPATED.

20. THE CONTRACTOR IS RESPONSIBLE FOR CONTROLLING STORM WATER DRAINAGE IN THE VICINITY OF THE WALL DURING CONSTRUCTION. STORM WATER RUNOFF IS ~~TO BE~~ COLLECTED AND DISCHARGED AWAY FROM THE WALL AND REINFORCED BACKFILL.

21. NOMINAL STRIPS LENGTHS

    THE REINFORCING STRIP LENGTHS SHOWN ON THE PLANS, MEASURED FROM THE BACK FACE OF THE PANEL, ARE THE NOMINAL LENGTHS REQUIRED BY CALCULATION. THE ACTUAL FABRICATED STRIP LENGTHS ARE OFTEN LONGER (UP TO 6") DUE TO MANUFACTURING TOLERANCES. THE REQUIRED HORIZONTIAL LIMIT OF GRANULAR BACKFILL IS EQUAL TO THE NOMINAL STRIP LENGTH. ADDITIONAL GRANULAR BACKFILL BEYOND THE NOMINAL STRIP LENGTH IS NOT REQUIRED BY CALCULATION.

22. SELECT BACKFILL QUANTITY

    THE SELECT BACKFILL QUANTITY INDICATED BY THE REINFORCED EARTH COMPANY IS CALCULATED BY MULTIPLYING THE NOMINAL STRIP LENGTHS SHOWN ON THE PLANS (PLUS 0 ft) BY THEIR TRIBUTARY WALL SURFACE AREA AND CONVERTING THE RESULT TO A NEATLINE CUBIC YARD QUANTITY. THIS INFORMATION IS FURNISHED FOR THE CONTRACTOR'S INFORMATION ONLY AND IS NOT INTENDED TO REPRESENT THE ACTUAL QUANTITIES REQUIRED TO COMPLETE THE WORK. THE CONTRACTOR MUST CALCULATE HIS OWN EXCAVATION AND BACKFILL QUANTITIES BASED UPON THE SPECIFIC CONDITIONS OF THE PROJECT.

23. PANEL FINISH

    PRECAST PANELS FOR THIS PROJECT ~~SHALL~~ HAVE A PLAIN SMOOTH FINISH WITH ARCHES AND A FRACTURED FIN FORMLINER FINISH.
    PRECAST CORNER ELEMENTS SHALL HAVE A PLAIN SMOOTH FINISH.

24. NOTE TO CONTRACTOR

    ONLY THE FOLLOWING MATERIALS ARE SUPPLIED BY THE REINFORCED EARTH COMPANY:
    - PRECAST CONCRETE FACING PANELS
    - REINFORCING STRIPS
    - BOLT SETS (FOR ATTACHING REINFORCING STRIPS TO PANELS)
    - BEARING BLOCKS
    - RUBBER SHIMS
    - FILTER CLOTH AND ADHESIVE (FOR PANEL JOINTS)

    ANY OTHER MATERIALS CALLED FOR IN THE CONTRACT PLANS OR SPECIFICATIONS ARE TO BE SUPPLIED BY THE CONTRACTOR. ANY JOINT MATERIALS SHOWN AT THE INTERFACE OF PRECAST PANELS AND CAST-IN-PLACE CONCRETE STRUCTURES ARE ~~TO BE~~ SUPPLIED BY THE ERECTION CONTRACTOR. ALL SANDBLASTING, PAINTING, SEALERS OR OTHER SPECIAL APPLIED COATINGS ARE ALSO SUPPLIED/INSTALLED BY THE CONTRACTOR IN THE FIELD FOLLOWING PANEL ERECTION.

25. CONTRACTOR RESPONSIBILITY

    THE REINFORCED EARTH COMPANY SUPPLIES PRECAST CONCRETE FACING PANELS AND ACCESSORIES ~~TO BE~~ USED IN CONJUNCTION WITH OTHER MATERIALS IN THE CONSTRUCTION OF THE REINFORCED EARTH® RETAINING WALLS DETAILED HEREIN. THE "CONSTRUCTION AND QUALITY CONTROL PROCEDURES MANUAL" FURNISHED BY THE REINFORCED EARTH COMPANY IS INTENDED TO PROVIDE A GENERAL EXPLANATION OF THE SYSTEM. IT IS THE CONTRACTOR'S OBLIGATION TO DEVISE AND EXECUTE A PROJECT SPECIFIC ERECTION SEQUENCE, PANEL UNLOADING, HANDLING AND BRACING SYSTEM, AND FALL PROTECTION SYSTEM. THE BRACING SYSTEM SHOWN IN THE "CONSTRUCTION AND QUALITY CONTROL PROCEDURES MANUAL" IS GENERAL IN NATURE AND DOES NOT ACCOUNT FOR PROJECT SPECIFIC CRITERIA. COMPLIANCE WITH THE GUIDELINES IN THIS MANUAL DOES NOT RELIEVE THE CONTRACTOR OF ITS RESPONSIBILITY TO ADHERE TO THE PROJECT PLANS, SPECIFICATIONS AND CONTRACT DOCUMENTS OR COMPLIANCE WITH ALL FALL PROTECTION, SAFETY, LAWS, STANDARDS AND PROCEDURES AT THE JOBSITE. CONTRACTORS SHOULD TAKE SPECIAL PRECAUTIONS TO PREVENT THE PANELS FROM SHIFTING OR FALLING DURING THE ERECTION PROCESS.

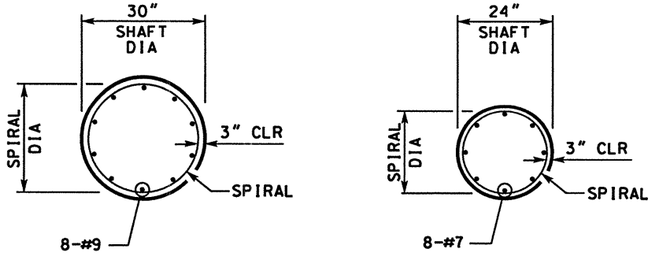
PLAN



SECTION THRU SHAFT

GENERAL NOTES:

1. ALL CONCRETE ~~SHALL BE~~ CLASS "C", UNLESS OTHERWISE NOTED.
2. ALL REINFORCING STEEL ~~SHALL BE~~ GRADE 60.
3. CHAMFER ALL EXPOSED CORNERS $^{3}/_{4}$".
4. EXPANSION JOINTS IN THE CAP ~~SHALL BE~~ LOCATED AT 40' CENTER (MAX).
5. VERTICAL BARS ~~MAY BE~~ SUPPORTED ON BOTTOM OF DRILLED HOLE IF MATERIAL IS FIRM ENOUGH TO DO SO WHEN CONCRETE IS PLACED.
6. DRILLED SHAFT REINFORCING STEEL ~~SHALL BE~~ INCLUDED IN THE BID FOR THE RETAINING WALL.
7. NO LAP SPLICE IN THE VERTICAL REINFORCING ~~WILL BE~~ PERMITTED UNLESS APPROVED BY THE ENGINEER.
8. DRAINAGE SYSTEM ~~SHALL~~ CONSIST OF 1' PANELS OF PREFABRICATED SOIL DRAINAGE MATS EMPTYING INTO 6" Ø PERFORATED DRAIN. FILTER FABRIC ~~SHALL~~ MEET THE REQUIREMENTS OF D-9-6200. DRAINAGE SYSTEM ~~WILL NOT BE~~ PAID DIRECTLY BUT ~~WILL BE~~ CONSIDERED SUSIDIARY OF THE "RETAINING WALL".
9. THE PRICE BID PER SQUARE FOOT OF RETAINING WALL ~~SHALL~~ INCLUDE ALL CONCRETE REINFORCING, DRILLED SHAFTS, CONCRETE PANELS, CONRETE CAP, DRAINAGE MATERIAL AND ANY OTHER MATERIAL NECESSARY TO COMPLETE THE WALL.
10. PRECAST CONCRETE PANELS FOR CANTILEVERED SHAFT WALLS ~~SHALL BE~~ SIMILAR IN FINISH SURFACE TO THE PANELS USED FOR MECHANICALLY STABILIZED EARTH RETAINING WALLS FOR THIS PROJECT. SEE GENERAL NOTES IN RW (MSE) SHEET.
11. PRIOR TO BEGINING WORK, CONTRACTOR ~~SHALL~~ SUBMIT TO ENGINEER FOR APPROVAL PRECAST PANEL DETAILS AND PROCEDURES FOR PANEL/CLOSURE POUR CONNECTION.

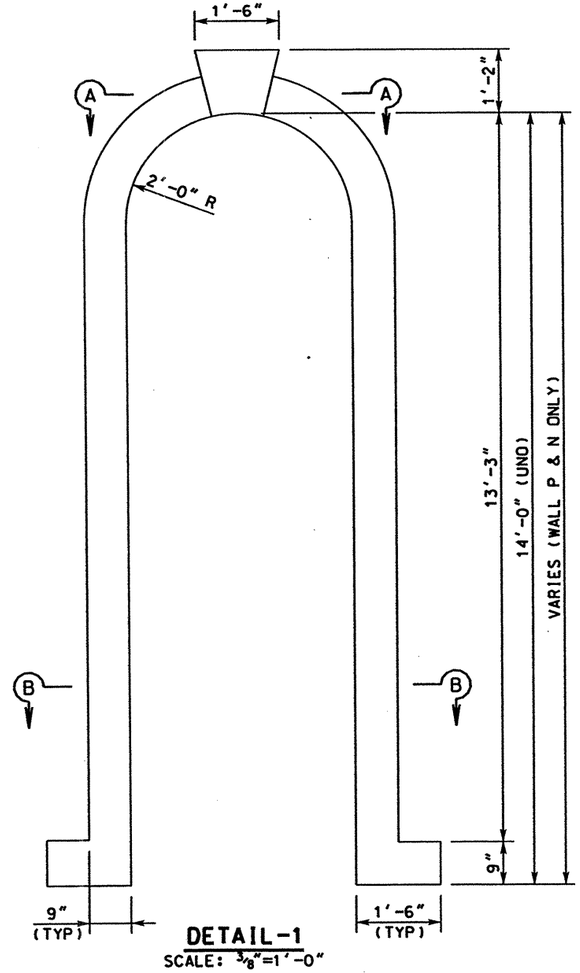
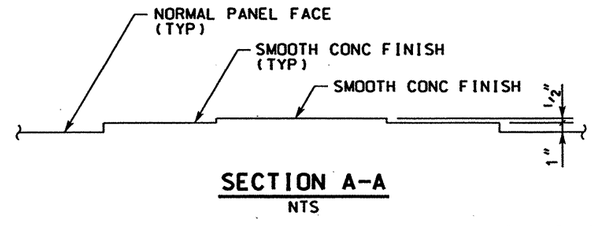
ELEVATION OF RETAINING WALL AT CARRIER DRIVE - EAST ABUTMENT (PORTION OF WALL P)

NTS



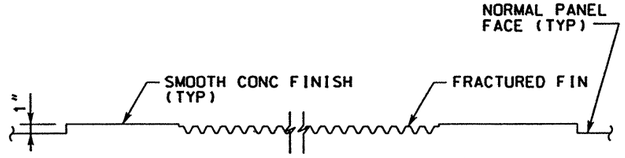
DETAIL-1

SCALE: 3/8"=1'-0"



SECTION A-A

NTS



SECTION B-B

NTS

GENERAL NOTES:

1. ALL EXPOSED CONCRETE SURFACES ~~SHALL BE~~ LIGHT TAN UNLESS OTHERWISEE INDICATED. INDICATED STAIN COLORS ARE H&C SILICON ACRYLIC CONCRETE STAINS MANUFACTURED BY FLR PAINTS, INC. AND DISTRIBUTED BY THE SHEWIN-WILLIAMS COMPANT. OR AN APPROVED EQUAL.
2. AREAS OF PROJECTION FROM THE NORMAL PANEL FACE ~~MAY BE~~ CAST AGAINST A WOODEN FORM FACE.
3. SPECIAL TREATMENT OF PANELS ~~WILL BE~~ SUBSIDIARY TO THE COST OF THE RETAINING WALL. ITEM 423.
4. PANELS ARE SHOWN WITH NOMINAL 4'x8' DIMENSIONS FOR ILLUSTATION PURPOSES ONLY.
5. ADD 10% DRAFT TO ALL DIMENSIONS.
6. ARCHES TO REPEAT ALONG WALL AS WALL HEIGHT PERMITS. FRACTURED FIN TO BEGIN 2 PANELS BEYOND LAST ARCH.
7. ALL WALLS NOT DETAILED WITH ARCHES ~~SHALL BE~~ FRACTURED FIN. WALLS B, G, H, J, K, L, REMAINDER OF P, O, R, S & T.
8. CONTRACTORS ~~SHALL~~ SUBMIT A COLORED 1'x1' CONCRETE PANEL FOR APPROVAL BY THE ENGINEER.

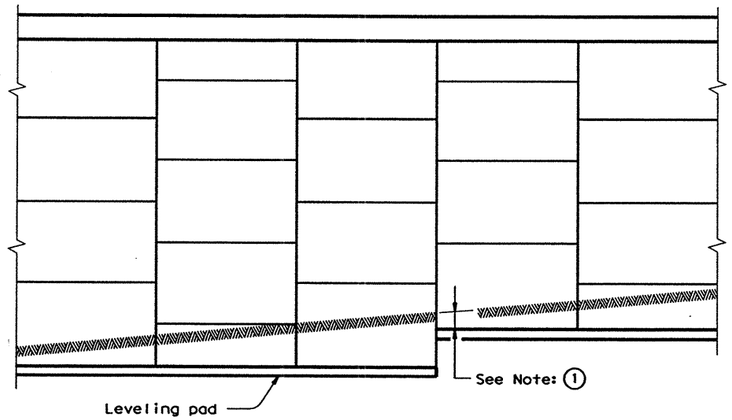
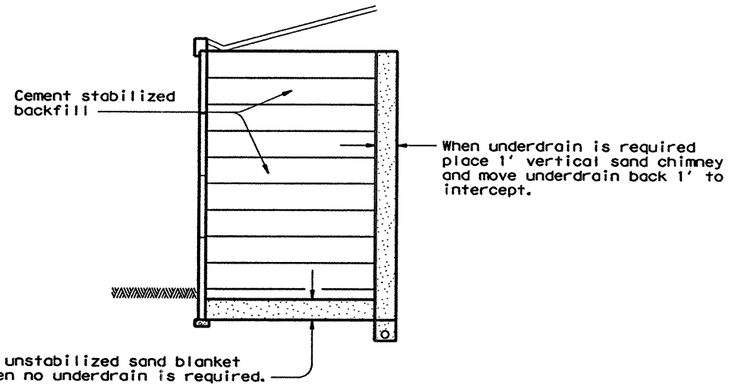
TYPICAL SECTION

(Wall at bottom of slope)



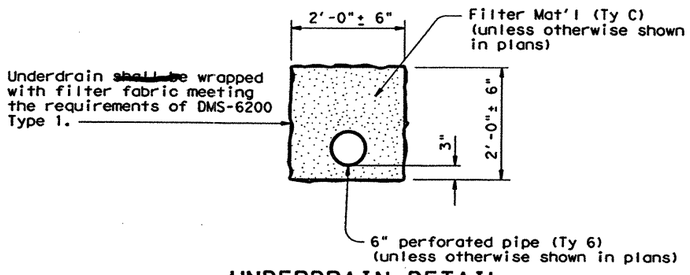
ELEVATION

① NOTE: Unless noted elsewhere in the plans, 1' minimum cover ~~shall be~~ provided from the top of leveling pad to finish grade.

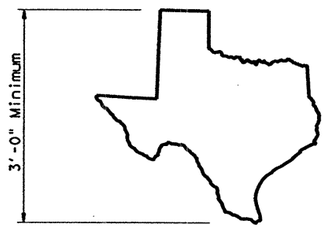


SPECIAL DRAINAGE PROVISIONS

(For use when cement stabilized backfill is used)



UNDERDRAIN DETAIL



MAP OF TEXAS EMBLEM

Map of Texas emblem ~~shall be~~ formed into a wall panel next to each bridge abutment. The exact location of each emblem ~~shall be~~ approved by the Engineer. The cost of forming the emblems ~~will not~~ be paid for directly, but ~~shall be~~ incidental to the Item "Retaining Wall".

The map of Texas ~~shall be~~ inset a minimum of ¾" into the face of the panel, and ~~shall~~ receive a smooth finish. The inset area shall be finished in a contrasting color as approved by the Engineer.

DESIGN PARAMETERS:

Design of retaining walls ~~shall be~~ based on the following design parameters:

Random Backfill (Embankment of Existing Soils)	unit weight = 125 pcf Ø = 30° c = 0 psf
Select Backfill	unit weight = 125 pcf Ø = 34° c = 0 psf
Cement Stabilized Select Backfill	unit weight = 125 pcf Ø = 45° c = 0 psf

Stress in steel and concrete shall be in accordance with current AASHTO Standard and Interim Specifications.

The minimum length of earth reinforcements shall be 8'-0".

STABILITY CRITERIA:

Factor of safety in sliding along the base of the structure shall be greater than or equal to 1.5.

Factor of safety in overturning shall be greater than or equal to 2.0.

The base pressure resultant shall fall within the middle third of the retaining wall.

The factor of safety against pullout of the earth reinforcements shall be greater than or equal to 1.5 at each level. Pullout resistance shall be determined from test data evaluated at ¾ inch strain.

CORROSION CRITERIA:

The earth reinforcement elements shall be designed to have a corrosion resistance - durability to ensure a minimum design life of 75 years. Maximum loss per side due to corrosion shall be computed by assuming a uniform loss model based on the following

Zinc corrosion rate (First 2 years) - 15 µm/yr.
Zinc corrosion rate (subsequent years) - 4 µm/yr.
Carbon steel corrosion rate - 12 µm/yr.

All stress and pullout calculations shall be done on the calculated earth reinforcement section remaining after 75 years.

GENERAL NOTES:

Section and elevation shown is for informational purposes only. Specific geometry is to be determined based on wall layouts and other plan information.

The select backfill specified for use within the mechanically stabilized earth volume shall extend horizontally from the back of the panels to the end of the earth reinforcements. The select backfill shall extend vertically from the top of the leveling pad or 4" below the lowest earth reinforcement, whichever is lower, to the top of panels.

The uppermost earth reinforcements shall be no more than 3.0' below the top of wall.

The lowest level of earth reinforcements shall be no more than 2.0' above the top of the leveling pad.

Minimum wire size for earth reinforcements shall be W7.0. If different longitudinal and cross wires are used in an earth reinforcement mesh, the smaller wire shall have at least 50% of the cross sectional area of the larger wire.

Standard precast concrete panels shall have a maximum height of 6', and a maximum surface area of 50 sq ft. Minimum panel thickness shall be 5". Panels shall be arranged to provide offset horizontal joints.

An open joint shall be provided around the perimeter of the concrete panels. The nominal joint opening shall be between ⅜" and ¾". The joint configuration shall be such that the filter fabric or pad materials are not exposed at the wall face.

A one-piece corner panel shall be provided for wall angle changes of greater than 30 degrees. Butting of chamfered panels will be allowed for angle changes of 30 degrees or less.

Concrete coping shall be provided along the top of wall, at the vertical steps at bridge backwalls, and at other vertical steps along the top of wall. The joints between all coping segments shall be sealed to prevent infiltration of water into the retaining wall backfill. Sealing shall be in accordance with the Item "Joint Sealants and Fillers", using Class 4 joint sealant.

"NARROW BASED" RAILING
T201, T203, T4, T411, C201, C203, C4 & C411
ADJACENT TO CONCRETE PAVEMENT

CAST-IN-PLACE COPINGS:
Casting of the coping directly against the precast panel sides will not be permitted, as this may result in panel cracking. The contractor shall use a ¼" (Min) compressible material on both sides of the panel to isolate the coping from the precast panel.
When cast-in-place coping is anchored to reinforced concrete pavement, a smooth level-up strip shall be provided on the top of the precast panels. The purpose of the level-up is to allow the pavement and coping to move longitudinally relative to the wall without causing damage.
Railing and coping joints shall be provided at 33' maximum spacing. Railing and coping joints shall be placed to coincide with precast panel joints.

PRECAST COPINGS:
A smooth level-up strip shall be provided on top of the precast panels prior to installation of the coping. Shims may be used on top of the level-up strip to facilitate alignment.
Precast coping shall be provided in 10' minimum lengths.

JOINTED CONCRETE PAVEMENT:
When coping is adjacent to and anchored into jointed concrete pavement, the coping joints shall coincide with the pavement joints.

JOINT SEALER:
The joints between coping segments shall be sealed in accordance with the Item "Joint Sealants and Fillers", joint sealing material, Class 4. The joint shall be sealed 3" below and 6" above the adjoining pavement surface, or as directed by the Engineer. The purpose of the joint sealing is to contain surface drainage and prevent infiltration into the retaining wall backfill.

GENERAL NOTES:
Details on this sheet are to be used in development of specific details for mounting traffic railing on mechanically stabilized earth (MSE) walls.
The specific details proposed shall have strengths equivalent to those shown on this sheet. Areas of particular importance are the connection of the coping to the railing, the strength of the vertical coping leg connecting the railing to the anchor slab, and the connection of the coping to the anchor slab or concrete pavement.
Shop drawings for the traffic railing foundations shall be submitted to the Engineer in accordance with the Item "Retaining Wall". The shop drawings shall include bar bending details.
Precasting of the coping or coping and railing will be allowed. The anchor slab, when required, shall be cast-in-place.
The Contractor's attention is directed to the fact that various configurations of precast coping/railing combinations are covered by patent. The contractor shall provide for use of these systems in accordance with Article 7.3.
Concrete shall be Class "C".
All reinforcing steel shall be Grade 60.
Longitudinal bars shall be #4.
Coping and anchor slabs shall be considered subsidiary to the Item "Retaining Wall". The traffic railing will be paid for by the linear foot for the appropriate railing type.

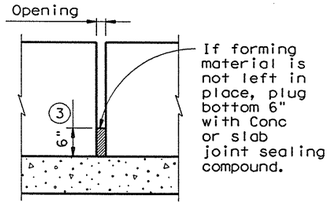
(1) Metal Beam Guard Fence Transitions must be attached to the bridge rail and extended along the embankment unless shown otherwise on the plans. See plan sheet for details and length for payment.

(2) Thrie-Beam Terminal Connector shall receive the same protective coating as the attached Metal Beam Guard Fence.

(3) Increase 2" for structures with Overlay.



INTERMEDIATE WALL JOINT DETAIL

Note: Provide intermediate wall joints over all slab construction joints, over interior supports on continuous units, and at equal intervals in between as necessary to maintain a 33' maximum length of unbroken wall. Material used in forming joint may be left in place if it is compressible and light in color such as the following materials: polystyrene, molded cork granules, sponge rubber sheet, etc.

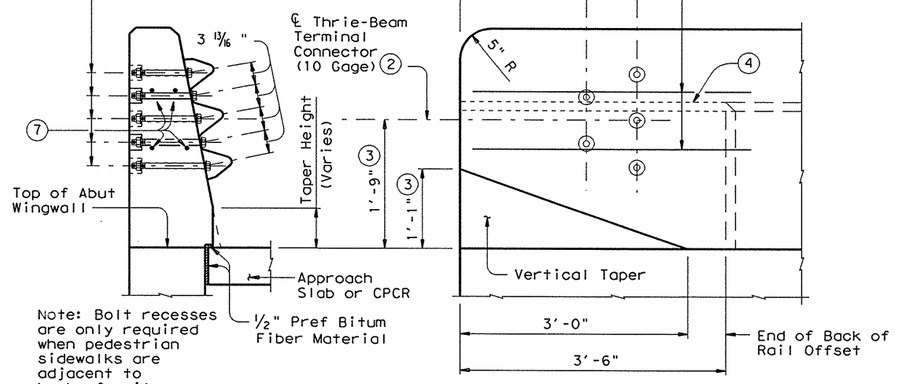
SECTIONS THRU RAIL

(5) As an aid in supporting reinforcement, additional longitudinal bars may be used in the slab with the approval of the Engineer. Such bars shall be furnished at the Contractors expense.

(6) Top longitudinal slab bar may be adjusted laterally 3" ± to tie reinforcing.

℄ 5 ~ 7/8" Dia A325 Hex Head Bolts with two 1 3/4" O.D. washers. Place washer under each head and nut. The 5 Terminal Connection Bolts shall be tightened in a well distributed pattern so to prevent damage or distortion of the Thrie-Beam Connection and the MBGF Transition. Bolts shall be cut off after installation so as to extend no more than 3/4" beyond nut. End of cut-off bolt shall be painted with Zinc-rich paint.

℄ 5 ~ 1" Dia holes and 2 1/2" Dia x 2" deep recesses. Holes and recesses must be formed or cored. Percussion drilling is not permitted. Adjust placement of reinforcing steel as necessary to avoid bolt holes and recesses.



SECTION

ELEVATION

TERMINAL CONNECTION DETAILS

(7) 4 additional Bars R(#4) 3'-8" in length shall be placed inside Bars S(#5) and centered 2'-0" from end of rail when Terminal Connections are required.

(4) Back of rail offset may, with Engineer's approval be continued to the end of the railing.

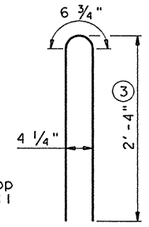
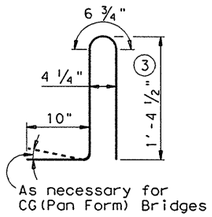
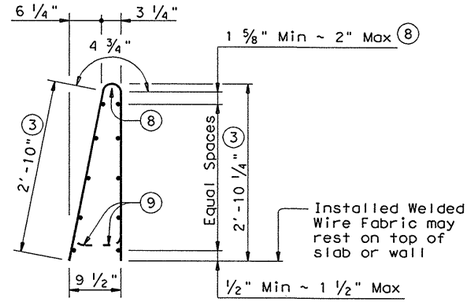
BARS S (#5)



BARS WU (#5)



BARS U (#5)



OPTIONAL WELDED WIRE FABRIC

DESCRIPTION	LONGITUDINAL WIRES	VERTICAL WIRES
Minimum (Cumulative Total) Wire Area	0.933 Sq In.	0.248 Sq In. per Ft
	No. of Wires	Spacing
Minimum	6	4"
Maximum	11	12"
Maximum Wire Size Differential	The smaller wire shall have an area of 40% or more of the larger wire.	

(3) Increase 2" for structures with Overlay.

(8) No longitudinal wires may be within upper bend.

(9) Bend or cut as required to clear drain slots.

GENERAL NOTES:

This rail has been evaluated and accepted to be of equal strength to other safety-shaped railings with like geometry, which have been crash tested to meet NCHRP Report 350 TL-4 criteria and can be used for design speeds of 50 mph and greater.

All parts of the railing including concrete parapet wall, reinforcing, MBGF connections, bolts, nuts and washers are included in the price bid per linear foot of rail.

All steel components except reinforcing shall be galvanized unless otherwise shown in plans.

All concrete for railing wall shall be Class "C".

All reinforcing steel shall be grade 60.

Shop drawings will not be required for this rail.

This railing may be constructed with slip-forms when shown on the plans or approved by the Engineer, with equipment approved by the Engineer. Sensor control for both line and grade must be provided. When slip-forming is used, the concrete may be cured with membrane curing compound.

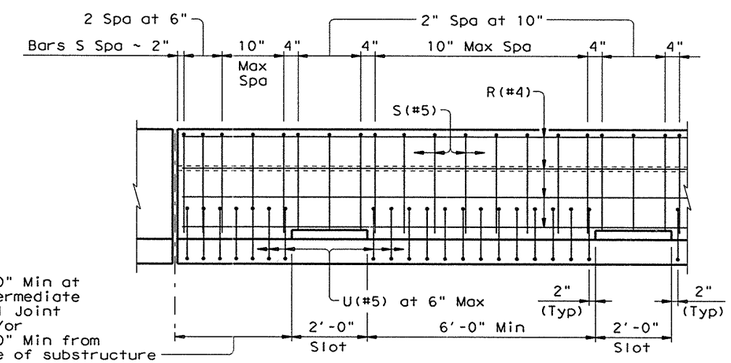
Additional reinforcing may be tack welded to the upper two thirds of the reinforcing cage to provide bracing when slip-forming is used. Additional anchorage devices may be added when welding is necessary in the lower one third of the cage. Do not weld to U or S bars in the lower one third of the cage.

The back of railing shall be vertical unless otherwise shown in the plans or approved by the Engineer.

Deformed welded wire fabric may be used as an option to conventional reinforcement and shall be made in accordance with ASTM A497 (Deformed Wire). Combinations of Reinforcing Steel and Welded Wire Fabric or configurations of Welded Wire Fabric other than shown will be permitted when the conditions in the table are satisfied and the dimension from end of section to first welded vertical wire does not exceed 3".

Epoxy coat bars U and WU if slab bars are epoxy coated.

Average weight of railing with no overlay is 376 plf.



OPTIONAL SIDE SLOT DRAIN DETAIL

Note: Side Slot Drains may be used where shown elsewhere on the plans or as directed by the Engineer. Drains should not be placed over railroad tracks, lower roadways, or sidewalks. When this rail is used as a separator between a roadway surface and a sidewalk surface, side drain slots will not be permitted.

DITCH FLOW

GENERAL NOTES:

1. DESIGN FREQUENCY:

   A. ROADSIDE DITCH - 10 YEAR
   B. INLETS ON MAINLANES - 10 YEAR
   C. INLETS FOR FRONTAGE ROADS - 10 YEAR
   D. TRUNK SYSTEM - 10 YEAR

2. RUNOFF COEFFICIENTS (C)

   A. GRASS - 0.35
   B. PAVEMENT - 0.90

3. AREAS SHOWN FOR RUNOFF FACTOR C=0.90 INCLUDES ADDITIONAL PAVED AREA FOR RAMP AND FRONTAGE ROAD CONSTRUCTION.

WinStorm (STORM DRAIN DESIGN)

Version 3.05. Jan. 25. 2002
Run @ 3/17/2003 10:19:42 AM

PROJECT NAME : LAREDO
JOB NUMBER : CF0130
PROJECT DESCRIPTION : STORM SEWER SYSTEM NO 1
ANALYSYS FREQUENCY : 10 Years
MEASUREMENT UNITS: ENGLISH

OUTPUT FOR ANALYSYS FREQUENCY of: 10 Years

Runoff Computation for Design Frequency.

(1) The wall heights shown will be rounded to the nearest Foot for bidding purposes.

(2) Concrete volume shown is for box culvert curb only. Curb concrete is considered part of the Box Culvert for payment.

(3) Concrete volume shown is total of wing, footing, culvert toewall (if any), anchor toewall (if any) and wingwall toewall. Riprap apron, culvert and curb quantities are not included.

GENERAL NOTES:

This sheet is a supplement to the Box Culvert standards. It is to be filled out by the culvert specifier and provides dimensions for the construction of the Box Culvert Wingwalls and Safety End Treatments.

An Excel 97 spreadsheet to assist in completing this table can be downloaded from the Bridge Standards (English) web page on the TxDOT web site.

NOTES:

Skew Angle = 0° for SW-0, FW-0, SETB-SW-0, and SETB-FW-0 standards.
30° Maximum for Safety End Treatment

SL:1 = Horizontal:1 Vertical
Side Slope at culvert for Flared or Straight Wingwalls. Channel Slope for Parallel Wingwalls.
Slope shall be 3:1 or flatter for Safety End Treatments.

T = Box Culvert Top Slab Thickness. Can be found on the applicable Box Culvert Standard.

U = Box Culvert Wall Thickness. Can be found on the applicable Box Culvert Standard.

C = Curb Height.

See applicable wing or end treatment standards for calculations of Hw, A, B, Lw, Ltw, Atw, and Total Wingwall Area.
Hw = Height of Wingwall.
A = Distance from Face of Curb to End of Wingwall (Not applicable to Parallel or Straight Wingwalls).
B = Offset of End of Wingwall (Not applicable to Parallel or Straight Wingwalls).
Lw = Length of Longest Wingwall.
Ltw = Length of Culvert Toewall (Not applicable when using Riprap Apron).
Atw = Length of Anchor Toewall (Applicable to Safety End Treatment only).
Total Wingwall Area = Wingwall area in S.F. for two wingwalls (one structure end) if Lt or Rt.
Area for four wingwalls (two structure ends) if Both.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

C850 CORNER OPTION "B"

ASTM C850 STANDARD

GENERAL NOTES:

Designs shown conform to ASTM C789 or ASTM C850. Refer to ASTM C789 or ASTM C850 for information or details not shown.

For ASTM C789 designs, all reinforcing steel shall have a minimum specified yield stress of 65 ksi.

For ASTM C850 designs, all reinforcing steel shall have a minimum specified yield stress of 60 ksi.

All concrete shall be Class "H" Concrete with a minimum 28 day compressive strength of 5,000 psi.

See SCP-MD standard sheet for miscellaneous details and notes not shown.

Designed for HS20 loading and to the maximum fill height shown.

In lieu of furnishing the designs shown on this sheet, the contractor may furnish an alternate design that is equal to or exceeds the box design for the design fill height in the table. Shop plans for alternate designs shall be submitted in accordance with Item "Precast Concrete Structures".

GENERAL NOTES:

Designs shown conform to ASTM C789 or ASTM C850. Refer to ASTM C789 or ASTM C850 for information or details not shown.

For ASTM C789 designs, all reinforcing steel shall have a minimum specified yield stress of 65 ksi.

For ASTM C850 designs, all reinforcing steel shall have a minimum specified yield stress of 60 ksi.

All concrete shall be Class "H" Concrete with a minimum 28 day compressive strength of 5,000 psi.

See SCP-MD standard sheet for miscellaneous details and notes not shown.

Designed for HS20 loading and to the maximum fill height shown.

In lieu of furnishing the designs shown on this sheet, the contractor may furnish an alternate design that is equal to or exceeds the box design for the design fill height in the table. Shop plans for alternate designs shall be submitted in accordance with Item "Precast Concrete Structures".

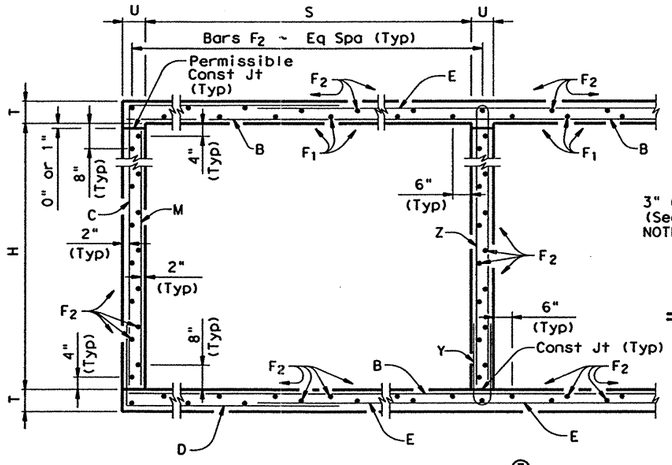
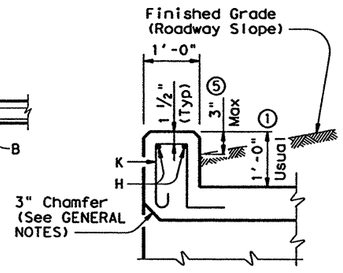
② Extend into slab.

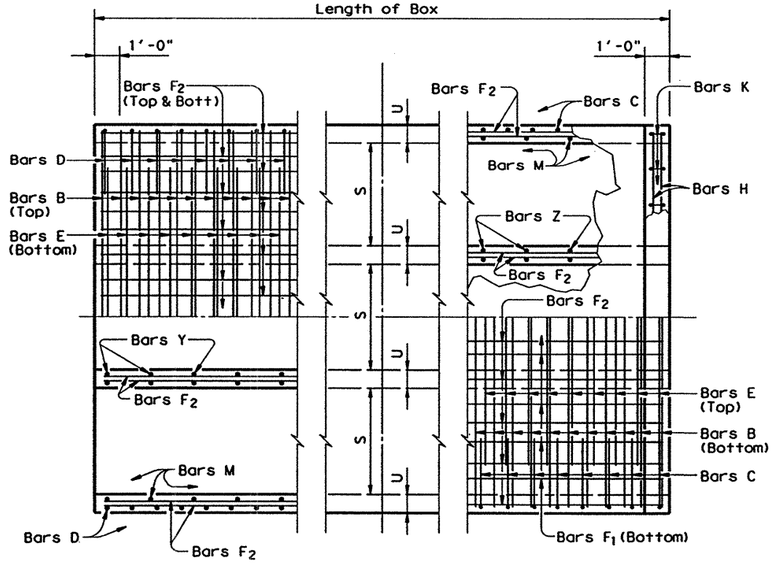


TYPICAL SECTION ③

③ Reinforcing shown for orientation purposes only. See table for number and spacing of bars.



SECTION THRU CURB



BOTTOM SLAB

TOP SLAB

PART PLANS ③

① 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details.

④ For curbs less than 1'-0" high, tilt bars K or reduce bar height as necessary to maintain cover. For curbs less than 3" high, bars K may be omitted.

⑤ For vehicle safety, curb heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 Loading and to the maximum fill height shown.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.

The bottom edge of the top slab shall be chamfered 3" at the entrance.

Reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

Construction joints shown at the flow line may be raised a maximum of 6" at the Contractor's option. If this option is used, Bars M may be cut off or raised, Bars C and D may be reversed, and Bars Y and Z may be reversed.

See standard MC-MD for skewed ends, angle sections and lengthening details.

For Direct Traffic, construct top slab to conform to crown of roadway while maintaining constant thickness of slab.

Bar Dimensions "X" and "Y" shall be adjusted as necessary.

The maximum permissible variation in dimension H is 6 inches.

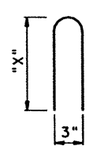
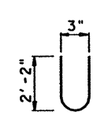
BARS D

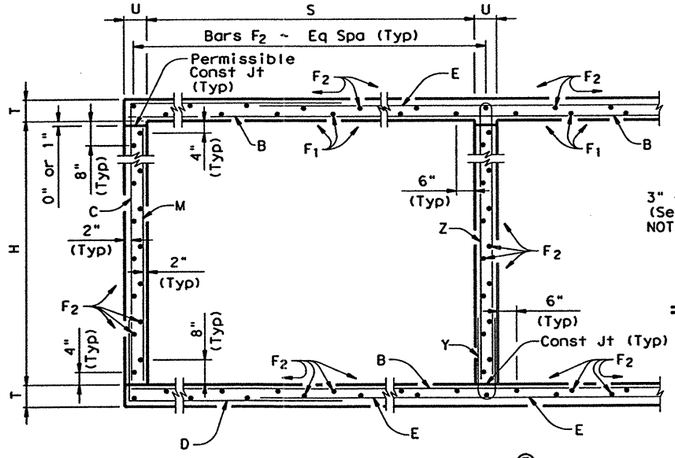


BARS Z



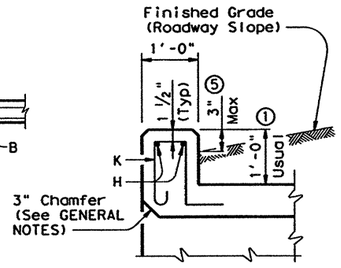
BARS Y

② Extend into slab.

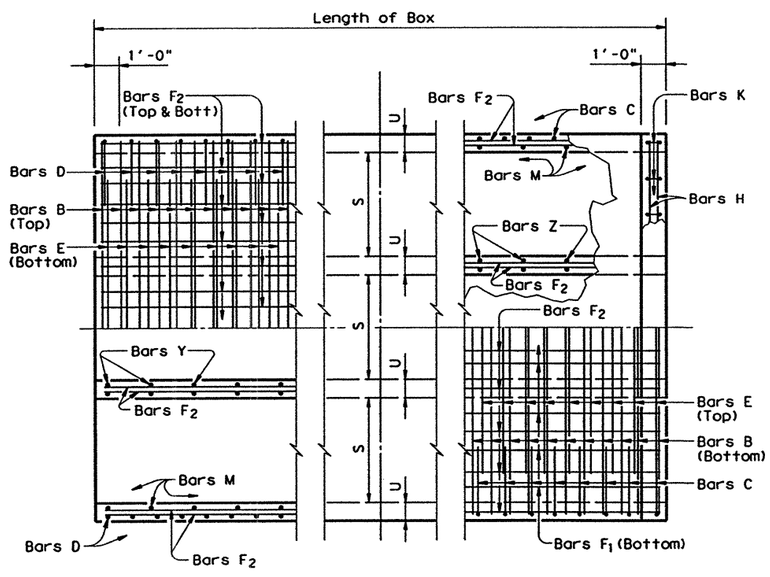


TYPICAL SECTION ③

③ Reinforcing shown for orientation purposes only. See table for number and spacing of bars.



SECTION THRU CURB



BOTTOM SLAB TOP SLAB

PART PLANS ③

① 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details.

④ For curbs less than 1'-0" high, tilt bars K or reduce bar height as necessary to maintain cover. For curbs less than 3" high, bars K may be omitted.

⑤ For vehicle safety, curb heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 Loading and to the maximum fill height shown.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.

The bottom edge of the top slab shall be chamfered 3" at the entrance.

Reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

Construction joints shown at the flow line may be raised a maximum of 6" at the Contractor's option. If this option is used, Bars M may be cut off or raised, Bars C and D may be reversed, and Bars Y and Z may be reversed.

See standard MC-MD for skewed ends, angle sections and lengthening details.

For Direct Traffic, construct top slab to conform to crown of roadway while maintaining constant thickness of slab. Bar Dimensions "X" and "Y" shall be adjusted as necessary. The maximum permissible variation in dimension H is 6 inches.

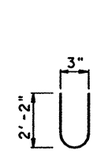
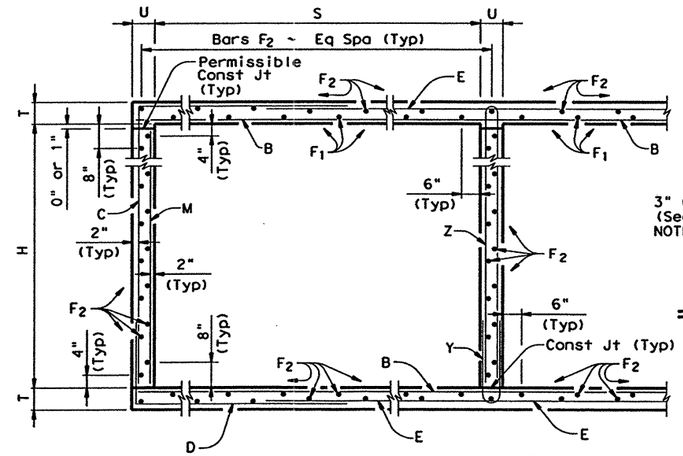
BARS Z



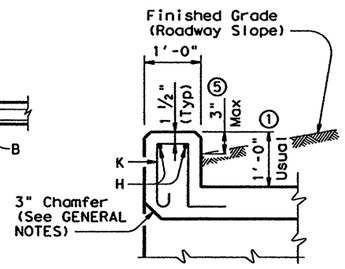
BARS Y

② Extend into slab.

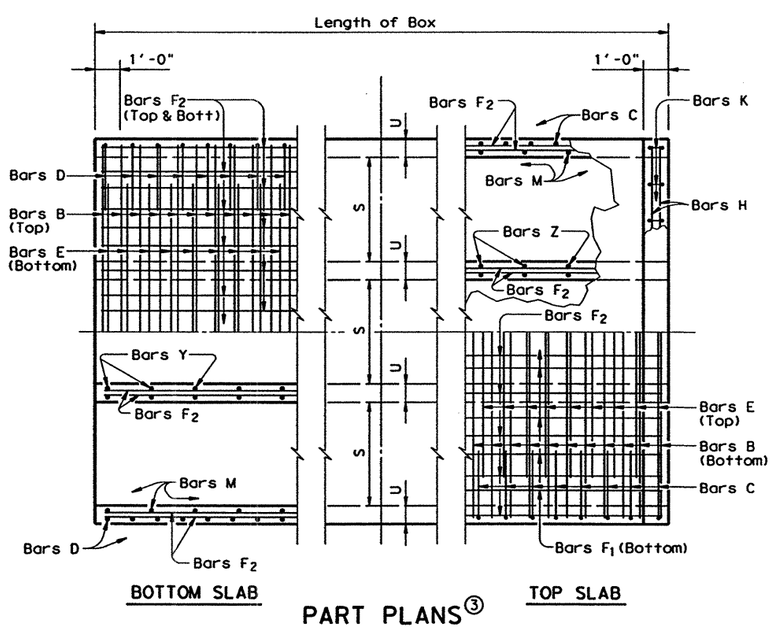


TYPICAL SECTION ③

③ Reinforcing shown for orientation purposes only. See table for number and spacing of bars.



SECTION THRU CURB



BOTTOM SLAB TOP SLAB

PART PLANS ③

① 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details.

④ For curbs less than 1'-0" high, tilt bars K or reduce bar height as necessary to maintain cover. For curbs less than 3" high, bars K may be omitted.

⑤ For vehicle safety, curb heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 Loading and to the maximum fill height shown.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.

The bottom edge of the top slab shall be chamfered 3" at the entrance.

Reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

Construction joints shown at the flow line may be raised a maximum of 6" at the Contractor's option. If this option is used, Bars M may be cut off or raised, Bars C and D may be reversed, and Bars Y and Z may be reversed.

See standard MC-MD for skewed ends, angle sections and lengthening details.

For Direct Traffic, construct top slab to conform to crown of roadway while maintaining constant thickness of slab. Bar Dimensions "X" and "Y" shall be adjusted as necessary. The maximum permissible variation in dimension H is 6 inches.

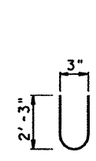
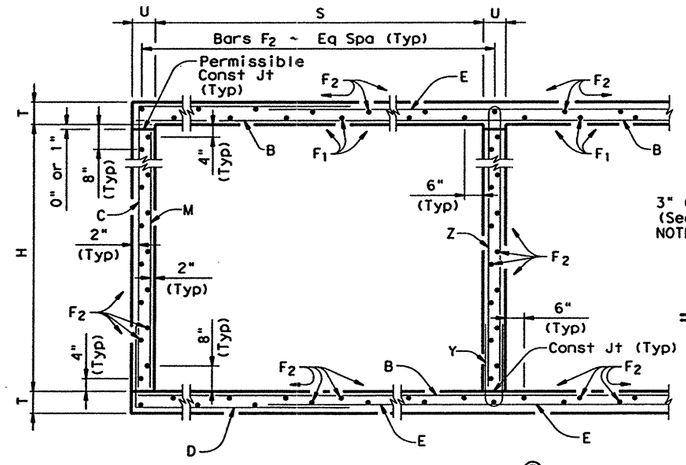
BARS Z



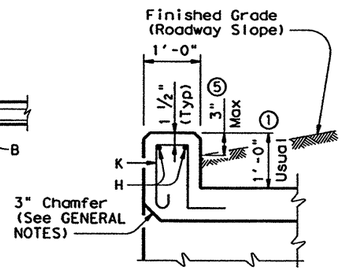
BARS Y

② Extend into slab.

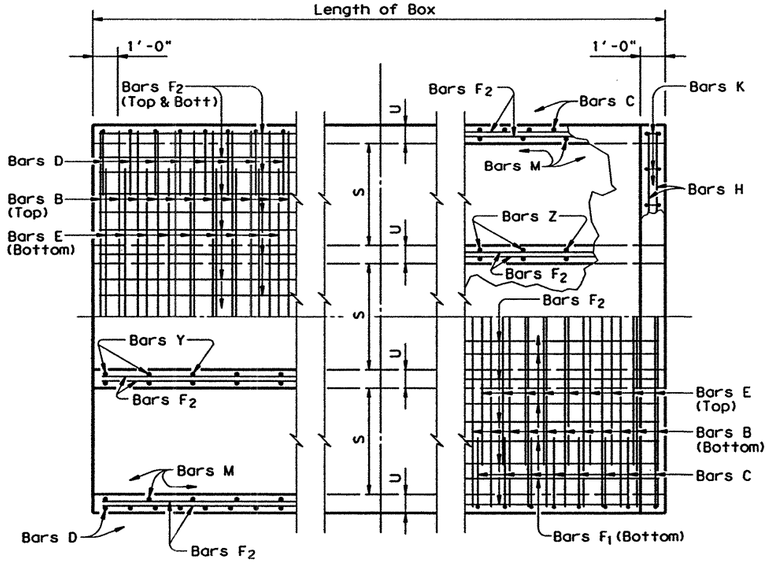


TYPICAL SECTION ③

③ Reinforcing shown for orientation purposes only. See table for number and spacing of bars.



SECTION THRU CURB



BOTTOM SLAB TOP SLAB

PART PLANS ③

① 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details.

④ For curbs less than 1'-0" high, tilt bars K or reduce bar height as necessary to maintain cover. For curbs less than 3" high, bars K may be omitted.

⑤ For vehicle safety, curb heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 Loading and to the maximum fill height shown.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.

The bottom edge of the top slab shall be chamfered 3" at the entrance.

Reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

Construction joints shown at the flow line may be raised a maximum of 6" at the Contractor's option. If this option is used, Bars M may be cut off or raised, Bars C and D may be reversed, and Bars Y and Z may be reversed.

See standard MC-MD for skewed ends, angle sections and lengthening details.

For Direct Traffic, construct top slab to conform to crown of roadway while maintaining constant thickness of slab. Bar Dimensions "X" and "Y" shall be adjusted as necessary. The maximum permissible variation in dimension H is 6 inches.

⑥ Bar lengths over 60' include one bar lap as follows:
#4 = 1'-9", #5 = 2'-2", & #6 = 2'-7"
For Epoxy coated reinforcing, bar laps shall be as follows:
#4 = 2'-7", #5 = 3'-3", & #6 = 3'-10"

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 Loading and to the maximum fill height shown.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.

The bottom edge of the top slab shall be chamfered 3" at the entrance.

Reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

Construction joints shown at the flow line may be raised a maximum of 6" at the Contractor's option. If this option is used, Bars M may be cut off or raised, Bars C and D may be reversed, and Bars Y and Z may be reversed.

See standard MC-MD for skewed ends, angle sections and lengthening details.

For Direct Traffic, construct top slab to conform to crown of roadway while maintaining constant thickness of slab.

Bar Dimensions "X" and "Y" shall be adjusted as necessary.

The maximum permissible variation in dimension H is 6 inches.

HS20 LOADING

① 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details.

④ For curbs less than 1'-0" high, tilt bars K or reduce bar height as necessary to maintain cover. For curbs less than 3" high, bars K may be omitted.

⑤ For vehicle safety, curb heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

③ Reinforcing shown for orientation purposes only. See table for number and spacing of bars.

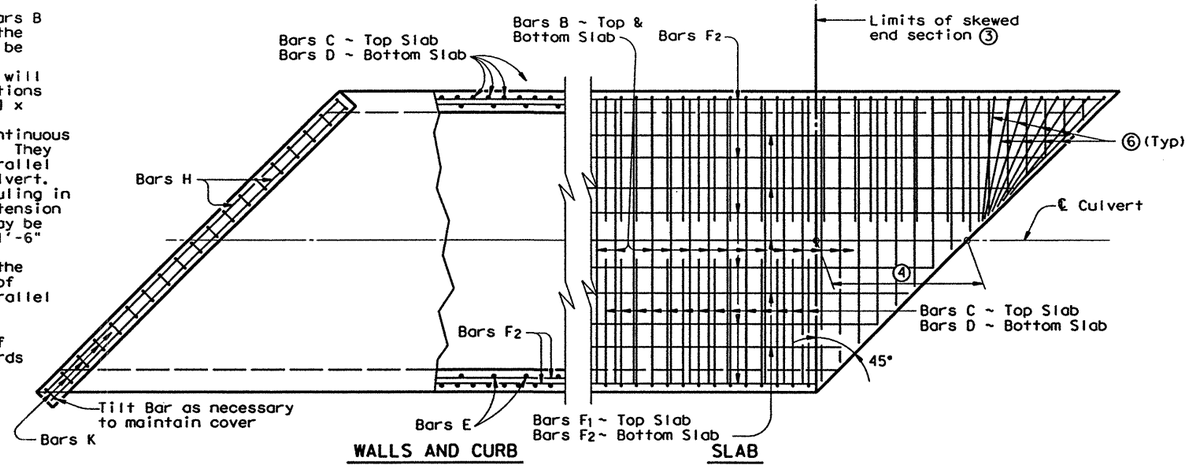
WALLS AND CURB SLAB

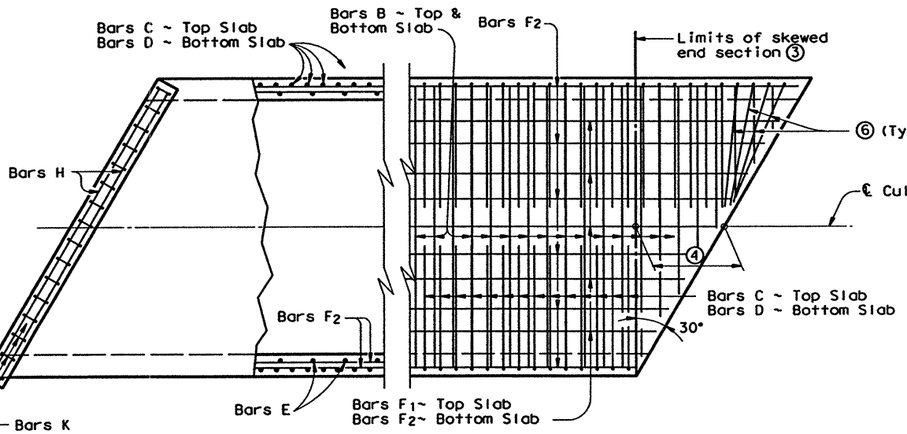
PLAN OF SKEWED ENDS ~ 15°⑦

② When the spacing between Bars B becomes less than half of the normal spacing, bars shall be cut to avoid fouling
③ The length of Bars B and E will vary in the skewed end sections
④ [One half of overall width] x [Tan of the skew angle]
⑤ Bars F_1 and F_2 shall be continuous through the angle section. They shall be bent to remain parallel to the walls of the Box Culvert.
⑥ When necessary to avoid fouling in acute corners, the slab extension leg of Bars C and Bars D may be shortened to a minimum of 1'-6" for skews of 30° and 45°.
⑦ For skews of 15° or less, the contractor has the option of placing Bars B, C and D parallel to the skewed end while maintaining spacing along centerline box. Lengths of Bars B shown on the standards shall be increased to accommodate the skew.



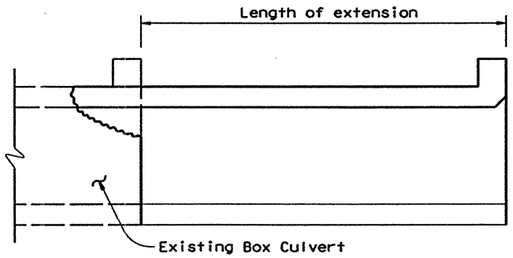
WALLS AND CURB SLAB

PLAN OF SKEWED ENDS ~ 45°



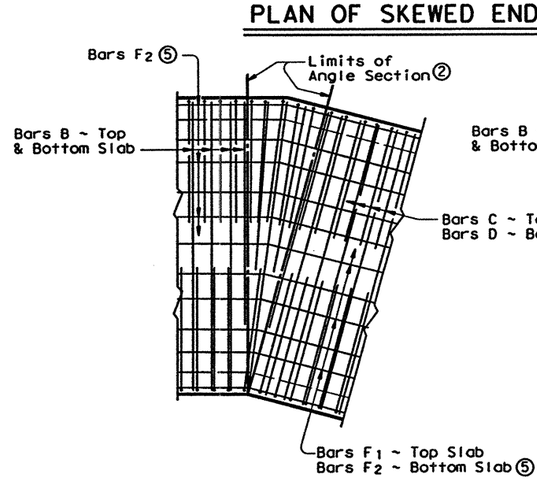
WALLS AND CURB SLAB

PLAN OF SKEWED ENDS ~ 30°

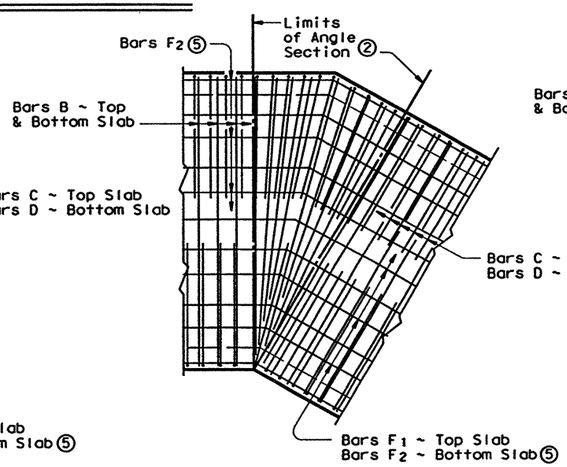


LENGTHENING DETAIL①

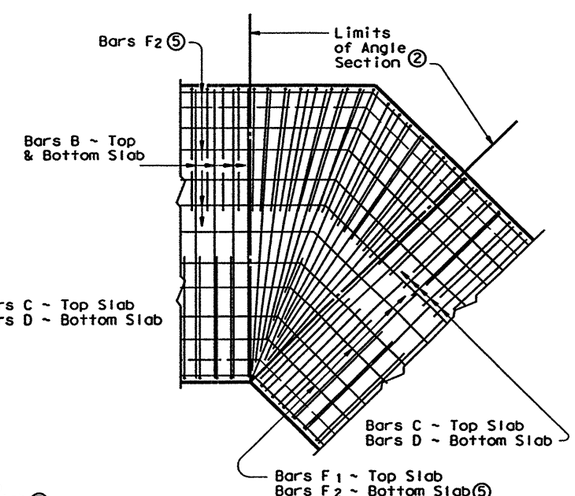
① For box culverts with less than 2'-0" of fill, the top slab shall be broken back to provide a minimum 1'-10" lap of the existing longitudinal bars with the longitudinal bars in the extension. If the depth of fill is 2'-0" or greater, the top slab shall be broken back to provide a 1'-0" minimum embedment of existing longitudinal reinforcing into the extension. Alternatively, if the fill height is greater than 2'-0", the existing curb may be left in place and 2'-0" long #6 bars shall be drilled and grouted 1'-0" into the existing top slab at 1'-6" center to center spacing. Wings and apron shall be broken back as necessary to install the extension. Exposed wingwall and apron reinforcing may be removed or cleaned and included in the extension. When lengthening existing box culverts with dimensions different than current standard dimensions, horizontal and vertical transitions shall be formed as directed by the Engineer. Bottom slabs shall match to maintain an uninterrupted flow line. Existing and new reinforcing shall be field bent into transition maintaining specified cover requirements. For direct traffic culverts, the "H" dimension may be adjusted to provide a smooth riding surface.



PLAN OF ANGLE SECTION ~ 15°



PLAN OF ANGLE SECTION ~ 30°



PLAN OF ANGLE SECTION ~ 45°

GENERAL NOTES:
Designed according to current AASHTO Standard and Interim Specifications.
Designed for HS20 loading.
All reinforcing steel shall be Grade 60.
All concrete shall be Class "C" concrete with a minimum 28 day compressive strength of 3600 psi; except for the top slab of direct traffic culverts, which shall be Class "S" concrete with a minimum 28 day compressive strength of 4000 psi.
Refer to Single Box Culverts Cast-in-Place standard for details of straight sections of culvert. For skewed sections and angle sections refer to Single Box Culverts Cast-in-Place standard for slab and wall dimensions, bar sizes, maximum bar spacing, and any other details not shown. For Skewed ends with curbs, adjust length of Bars H, number of Bars K, curb concrete volume and reinforcing steel weight by dividing the values shown on the culvert standards by the cosine of the skew angle.
Laps for Bars H, when required, shall be 1'-9" for uncoated bars and 2'-7" for epoxy coated.

Q	#4	1	~
Reinf (Lb/Ft)			2.45
Conc (CY/Ft)			0.037

① Extend Bars P 3'-0" minimum into bottom slab of Box Culvert.

② Adjust to fit as necessary to maintain 1 1/4" clear cover and 4" minimum between bars.

③ Quantities shown are based on an average wing height for two wings (one structure end). To determine total quantities for two wings multiply the tabulated values by 0.5 x (A+Lw).

④ Recommended values of Slope are: 2:1, 3:1, 4:1, & 6:1.

⑤ When shown elsewhere on the plans, a 5" deep concrete riprap shall be constructed. Unless otherwise shown on the plans or directed by the Engineer, the riprap shall have a 6" wide by 1'-6" deep reinforced concrete toewall along all edges adjacent to natural ground; the toewall shall be reinforced by extending typical riprap reinforcing into the toewall; construction joints or grooved joints, oriented in the direction of flow, shall extend across the full distance of the riprap, at intervals of approximately 20'. When such riprap is provided, the culvert toewall shown in SECTION B-B will not be required. Payment for riprap shall be as required by the pertinent Item.

⑥ At Contractor's option, Culvert Toewall may be ended flush with Wingwall Toewall. Adjust reinforcing from that shown as necessary.

⑦ Applicable values of of Skew are: 15°, 30°, and 45°.

⑧ Typical wingwall angle for all skews.

⑨ 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details. Estimated curb heights are shown elsewhere in the plans.

⑩ For vehicle safety, curb heights and wall heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

WING DIMENSION CALCULATIONS:

Formulas: (All values are in Feet)

Hw = H + T + C - 0.250'
A = (Hw - 0.333') (SL)
B = (A) [Tangent (Θ + 15°)]
Lw = (A) ÷ [Cosine (Θ + 15°)]

For Cast-in-place culverts:

Ltw = [(N) (S) + (N+1) (U)] ÷ (Cosine Θ)

For Precast culverts:

Ltw = [(N) (2U+S) + (N-1) (0.500')] ÷ (Cosine Θ)

Total Wingwall Area (Two Wings ~ S.F.) = (0.5) (Hw + 0.333') (Lw + A)

Hw = Height of Wingwall
SL:1 = Side Slope Ratio (Horizontal:1 Vertical)
A = Length of Short Wingwall
Lw = Length of Long Wingwall
Ltw = Culvert Toewall Length
N = Number of Culvert Spans
Θ = Culvert Skew

See applicable box culvert standard for H, S, T, and U values.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.

All reinforcing bars shall be adjusted to provide a minimum of 1 1/4" clear cover.

When structure is founded on solid rock, depth of toewalls for culverts and wingwalls may be reduced or eliminated as directed by the Engineer.

See BCS sheet for additional dimensions and information.

The quantities for concrete and reinforcing steel resulting from the formulas given on this sheet are for Contractor's information only.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

TABLE OF ESTIMATED CULVERT TOEWALL QUANTITIES

Bar	Size	No.	Spa
L	#4	~	1'-6"
Q	#4	1	~
Reinf (Lb/Ft)			2.45
Conc (CY/Ft)			0.037

1. Extend Bars P 3'-0" minimum into bottom slab of Box Culvert.
2. Adjust to fit as necessary to maintain 1 1/4" clear cover and 4" minimum between bars.
3. Quantities shown are based on an average wing height for two wings (one structure end). To determine total quantities for two wings multiply the tabulated values by Lw.
4. Recommended values of Slope are: 2:1, 3:1, 4:1, & 6:1.
5. When shown elsewhere on the plans, a 5" deep concrete riprap shall be constructed. Unless otherwise shown on the plans or directed by the Engineer, the riprap shall have a 6" wide by 1'-6" deep reinforced concrete toewall along all edges adjacent to natural ground; the toewall shall be reinforced by extending typical riprap reinforcing into the toewall; construction joints or grooved joints, oriented in the direction of flow, shall extend across the full distance of the riprap, at intervals of approximately 20'. When such riprap is provided, the culvert toewall shown in SECTION B-B will not be required. Payment for riprap shall be as required by the pertinent Item.
6. At Contractor's option, Culvert Toewall may be ended flush with Wingwall Toewall. Adjust reinforcing from that shown as necessary.
7. 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details. Estimated curb heights are shown elsewhere in the plans.
8. For vehicle safety, curb heights and wall heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

WING DIMENSION CALCULATIONS:

Formulas: (All values are in Feet)
Hw = H + T + C - 0.250'
A = (Hw - 0.333') (SL)
B = (A) Tangent (30°)
Lw = (A) ÷ Cosine (30°)
For Cast-in-place culverts:
Ltw = (N) (S) + (N+1) (U)
For Precast culverts:
Ltw = (N) (2U+S) + (N-1) (0.500')
Total Wingwall Area (Two Wings ~ S.F.) = (Hw + 0.333') (Lw)

Hw = Height of Wingwall
SL:1 = Side Slope Ratio (Horizontal:1 Vertical)
Lw = Length of Wingwall
Ltw = Culvert Toewall Length
N = Number of Culvert Spans

See applicable box culvert standard for H, S, T, and U values.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.
All reinforcing steel shall be Grade 60.
All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.
All reinforcing bars shall be adjusted to provide a minimum of 1 1/4" clear cover.
When structure is founded on solid rock, depth of toewalls for culverts and wingwalls may be reduced or eliminated as directed by the Engineer.
See BCS sheet for additional dimensions and information.
The quantities for concrete and reinforcing steel resulting from the formulas given on this sheet are for Contractor's information only.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty is made by the Texas Department of Transportation for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

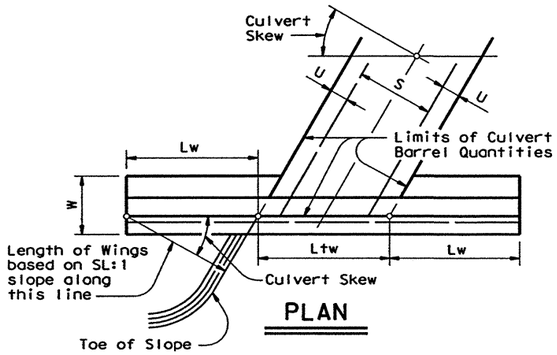
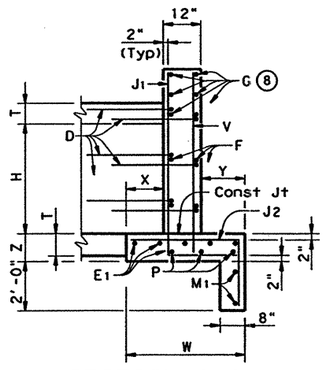
DETAILS FOR NON-SKEWED BOX CULVERTS

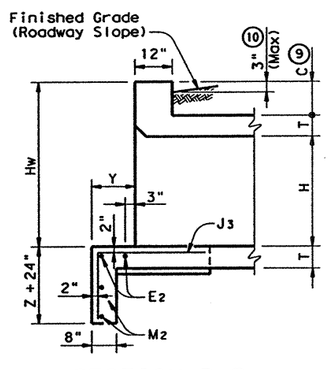


PLAN

DETAILS FOR SKEWED BOX CULVERTS
(Showing 30° Skew)



SECTION A-A
(Showing Wing Reinf)



SECTION B-B
(Showing Toewall Reinf)

1. Skew Angle = 0°
2. At discharge end, chamfer may be ¾".
3. For 15° Skew ~ 1"
   For 30° Skew ~ 2"
   For 45° Skew ~ 3"
4. Quantities shown are for two wings. To determine total quantities for two wings, multiply the tabulated values by Lw.
5. Provide weepholes for Hw = 5'-0" and greater. Fill around weepholes with coarse gravel.
6. Extend Bars E1 1'-6" minimum into the bottom slab of the culvert.
7. Lap Bars M1 1'-6" minimum with Bars M2.
8. Bars G shall be equally spaced at 1'-0" maximum, placed as shown. There shall be at least 4 Bars G per wing.
9. 0" min to 5'-0" max. For T6 or C6 Rail, see T6-CM standard for additional details. For curbs without rail and greater than 1'-0" high, see ECD standard for additional details. Estimated curb heights are shown elsewhere in the plans.
10. For vehicle safety, curb heights and wall heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

WING DIMENSION CALCULATIONS:

Formulas: (All values are in Feet)
Hw = H + T + C
Lw = (Hw) (SL) ÷ Cosine (V)
For Cast-in-place culverts:
Ltw = [(N) (S) + (N + 1) (U)] ÷ (Cosine V)
For Precast culverts:
Ltw = [(N) (2 U + S) + (N - 1) (0.5')] ÷ (Cosine V)
Total Wingwall Area (Two Wings ~ S.F.)
= (2) (Hw) (Lw)

Hw = Height of Wingwall
Lw = Length of Wingwall
Ltw = Culvert Toewall Length
N = Number of Culvert Spans
SL:1 = Channel Slope ratio. (Horizontal: 1 Vertical, Usual value is 2:1)
V = Culvert Skew

See applicable box culvert standard for S, H, T and U values.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.
All reinforcing steel shall be Grade 60.
All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.
All reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.
When structure is founded on solid rock, depth of toewalls for culverts and wingwalls may be reduced or eliminated as directed by the Engineer.
See BCS sheet for additional dimensions and information.
The quantities for concrete and reinforcing steel resulting from the formulas given on this sheet are for Contractor's information only.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

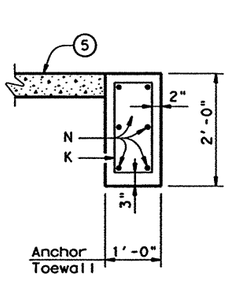
SECTION B-B ⑤



SECTION C-C

WING DIMENSION CALCULATIONS:

Formulas: (All values are in Feet)

Hw = H + T + C - 0.250' ⑨

A = (Hw - 0.333') (SL)

B = (A) (Tangent 30°)

Lw = (A) ÷ (Cosine 30°)

For Cast-in-place culverts:

Ltw = (N) (S) + (N + 1) (U)

For Precast culverts:

Ltw = (N) (2U + S) + (N - 1) (0.500')

Lc = (Ltw) - (2U)

Atw = (Lc) + (2B)

Total Wingwall Area (Two Wings ~ S.F.) = (Hw + 0.333') (Lw)

Hw = Height of Wingwall
SL:1 = Side Slope Ratio (Horizontal : 1 Vertical)
Lw = Length of Wingwall
Ltw = Culvert Toewall Length
Lc = Culvert Curb between Wings
Atw = Anchor Toewall Length
N = Number of Culvert Spans

See applicable box culvert standard for H, S, T, and U values. See Table of Maximum Wall Heights for limits on Hw.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

The Safety End Treatments shown herein are intended for use in those installations where out of control vehicles are likely to traverse the openings approximately perpendicular to the Pipe Runners.

Pipe Runners are designed for a traversing load of 1,800 pounds at yield as recommended by Research Report 280-1, "Safety Treatment of Roadside Cross-Drainage Structures", Texas Transportation Institute, March 1981.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.

All reinforcing bars shall be adjusted to provide a minimum of 1 ¼" clear cover.

When structure is founded on solid rock, depth of toewalls for culverts and wingwalls may be reduced or eliminated as directed by the Engineer.

See BCS sheet for additional dimensions and information.

All bolts, nuts, washers, brackets, angles, and pipe runners are considered parts of the Safety End Treatment for payment.

Pipe Runners shall conform to the requirements of ASTM A53 (Type E or S, Grade B), ASTM A500 (Grade B), or API 5LX52.

Bolts and nuts shall conform to ASTM A307. Steel plates shall conform to ASTM A36. All steel components, except reinforcing, shall be galvanized. Galvanizing damaged during transport or construction shall be repaired in accordance with the specifications.

The quantities for concrete and reinforcing steel resulting from the formulas given on this sheet are for Contractor's information only.

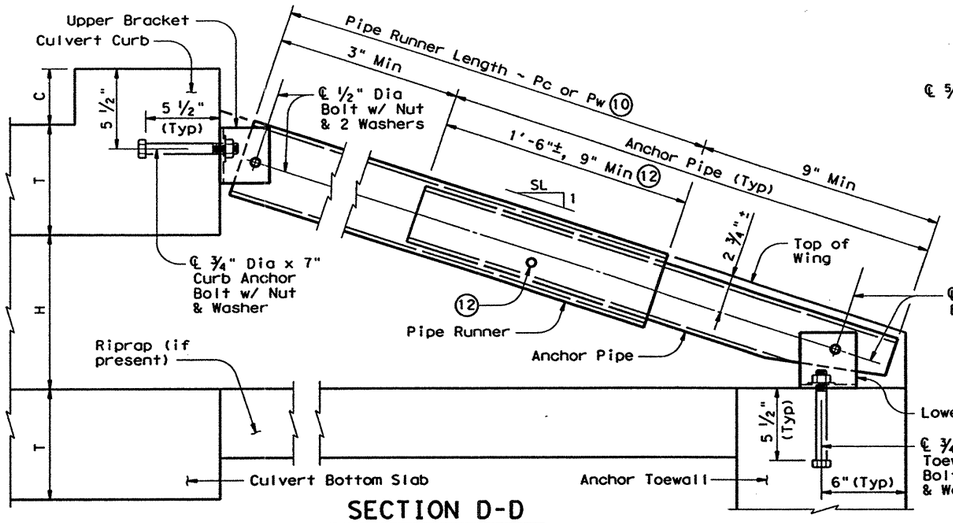
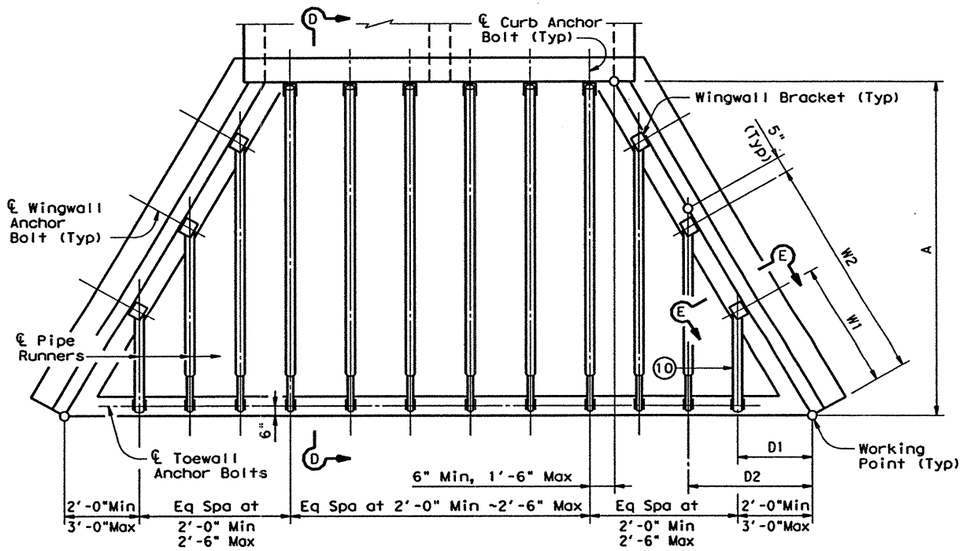
COMMENTS:

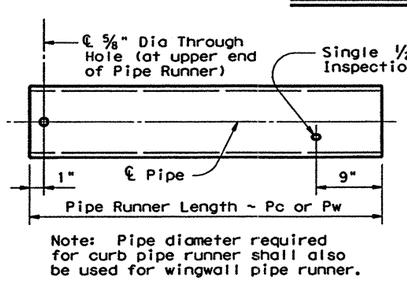


SECTION D-D

(Showing Curb Pipe Runner. Except for upper bracket, Wingwall Pipe Runners are similar.)

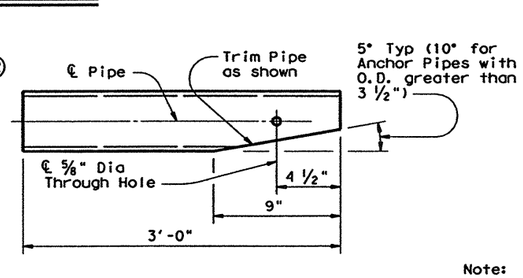


PIPE RUNNER PLAN

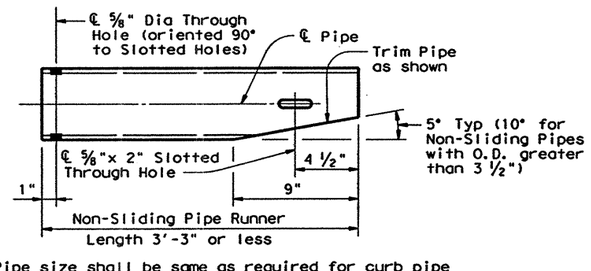


Note: Pipe diameter required for curb pipe runner shall also be used for wingwall pipe runner.

PIPE RUNNER DETAILS

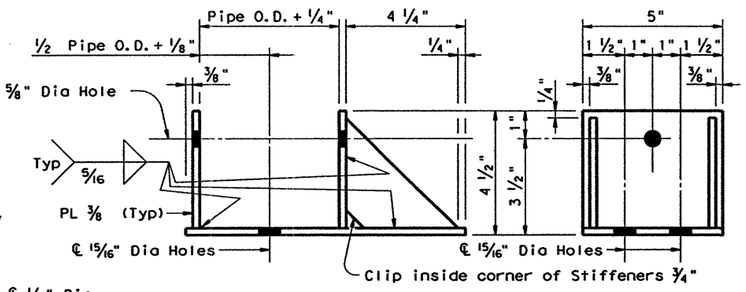


ANCHOR PIPE DETAILS



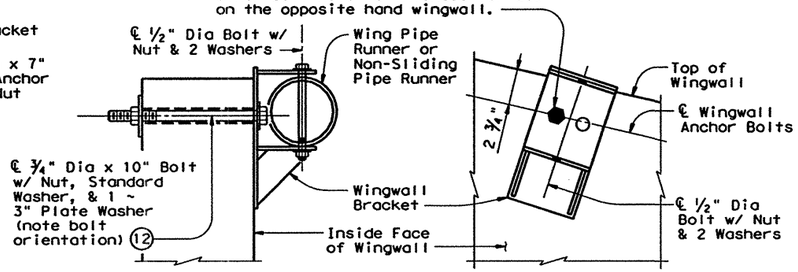
Note: Pipe size shall be same as required for curb pipe runner. Adjust the corresponding Lower Bracket accordingly.

NON-SLIDING PIPE RUNNER DETAILS



ELEVATION SIDE VIEW

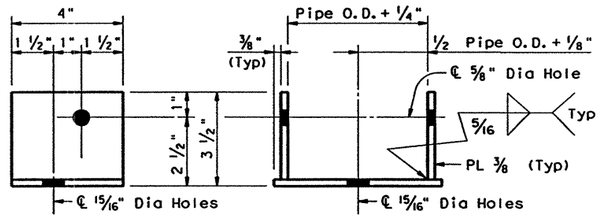
¾" Anchor Bolt shall be installed in hole nearest to the culvert curb. Other bolt hole is intended for use on the opposite hand wingwall.



SECTION E-E (Showing installed bracket.) ELEVATION (Showing installed bracket normal to Wall. Pipe not shown for clarity.)

Note: Wingwall Bracket shall match the Upper Curb Bracket size.

WINGWALL BRACKET DETAILS



SIDE VIEW ELEVATION

Note: Upper and Lower Brackets shall, except for the brackets used with Non-Sliding Pipe Runners, match the required pipe diameters as shown in the table.

UPPER & LOWER BRACKET DETAILS

MAXIMUM PIPE RUNNER LENGTHS & REQUIRED PIPE RUNNER SIZES

Maximum Pipe Runner Length (Pc or Pw)	Required Pipe Runner Size			Required Anchor Pipe Size		
	Pipe Size	Pipe O.D.	Pipe I.D.	Pipe Size	Pipe O.D.	Pipe I.D.
9'-4"	3" STD	3.500"	3.068"	2" STD	2.375"	2.067"
19'-0"	4" STD	4.500"	4.026"	3" STD	3.500"	3.068"
33'-6"	5" STD	5.563"	5.047"	4" STD	4.500"	4.026"

(10) If Pipe Runner Length Pw is 1'-9" or less, a single Non-Sliding Pipe Runner shall replace the normal Pipe Runner and Anchor Pipe. See NON-SLIDING PIPE RUNNER DETAILS for additional information.

(11) At Contractor's option, a ⅞" diameter hole may be drilled in the Wingwall or a ⅞" I.D. sleeve may be cast with the Wingwall.

(12) After installation of Pipe Runner, the ½" inspection hole shall be utilized to ensure that the lap of the Anchor Pipe with the Pipe Runner is adequate.

PIPE RUNNER DIMENSION CALCULATIONS:

Formulas: (All values are in Feet)

W"n" = (2.000) (D"n") - (0.416)

Pw"n" = (D"n") (K2) - (2.063)

Pw1 Non-Sliding Pipe Runner (If required) = (D1) (K2) - (0.563)

Pc = (A) (K1) - (1.688)

W"n"= Distance from Working Point to centerline Anchor Bolt measured along bottom inside face of Wing

D"n"= Distance from Working Point to centerline Pipe Runner measured along outside face of Anchor Toewall

Pw = Wingwall Pipe Runner Length

Pc = Curb Pipe Runner Length

K = Constant Values for use in formulas

Slope SL:1	K1	K2
3:1	1.054	1.826
4:1	1.031	1.785
6:1	1.014	1.756

"n" = Wing Pipe Runner Number

DISCLAIMER:

PIPE RUNNER LAYOUT

(13) If the outermost Wing Pipe Runner is a Non-Sliding Pipe Runner, the next outermost Wing Pipe Runner ~~shall be~~ considered the Shortest.

(14) Quantities shown are for one structure end if Lt or Rt. Quantities shown are for two structure ends if Both

SPECIAL NOTE:

This tabular sheet is to be filled out by the culvert specifier and provides information for the construction details and quantities of Pipe Runners.

An Excel 97 spreadsheet to assist in completing this table can be downloaded from the Bridge Standards (English) web page on the TxDOT web site.

Note that the tabular quantities are given for estimating purposes only. It is likely that these quantities will change due to field conditions. Therefore, all dimensions ~~shall be~~ verified by the Contractor in the field prior to fabrication of the Safety End Treatment components.

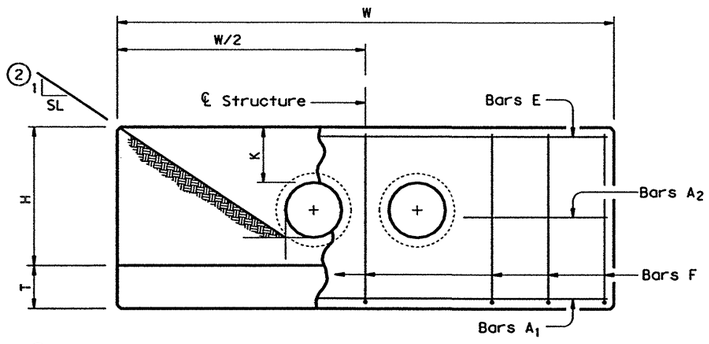
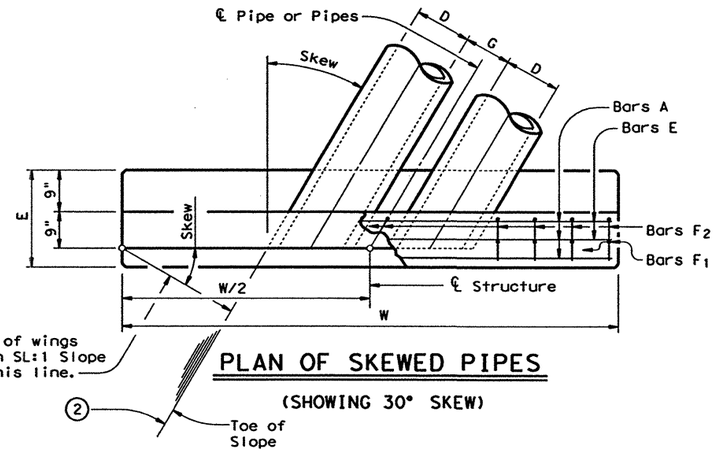
① Quantities increase slightly for metal pipe installations.



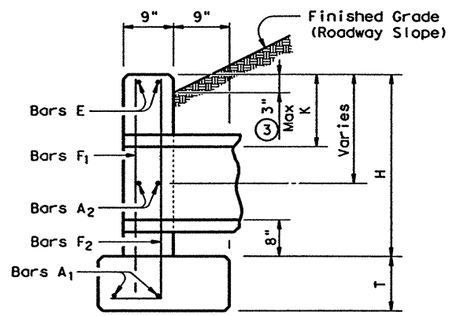
② Indicated slope is perpendicular to ℄ Pipe or Pipes

ELEVATION



PLAN OF SKEWED PIPES

(SHOWING 30° SKEW)



℄ SECTION

③ For vehicle safety, curb heights and wall heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

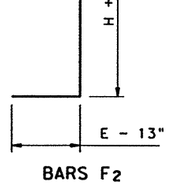
④ TABLE OF REINFORCING STEEL

Bar	Size	Spa	No.
A1	# 5	~	2
A2	# 5	1'-6"	~
E	# 5	~	2
F	# 5	1'-0"	~

④ Quantities shown are for one structure end. (One headwall)



BARS F_2

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Reinforcing steel shall be placed with the center of the outside layer of bars 2" from the surface of the concrete.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.

℄ SECTION

(3) For vehicle safety, curb heights and wall heights shall be reduced, if necessary, to provide a maximum 3" projection above finished grade. No changes will be made in quantities and no additional compensation will be allowed for this work.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Reinforcing steel ~~shall be~~ placed with the center of the outside layer of bars 2" from the surface of the concrete.

All reinforcing steel ~~shall be~~ Grade 60.

All concrete ~~shall be~~ Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.

① For T less than 7" see Standard SCP-MD for details not shown.

② Normal Culvert Bars B or additional Bars H per skewed end details.

③ Additional #4 Bars as required to maintain 1'-0" max spa.

④ Place normal culvert Bars K as shown

⑤ For curbs greater than 1'-0" high, place Bars L as shown. Tilt hook as necessary to maintain cover.

⑥ Place normal culvert Bars H as shown

⑦ Optional Bars L are to be used only for Precast Box Culverts with 3'-0" closure pour.

⑧ Quantities shown are per linear foot of curb length assuming T=7". Values in table can be interpolated for intermediate values of curb height, C. Quantity includes Bars K (when applicable) and Bars H shown on the box culvert standards.

⑨ Length of Bars V may be adjusted as necessary to maintain clear cover. Omit normal culvert Bars K when using Bars V.

GENERAL NOTES:

Designed according to current AASHTO Standard and Interim Specifications.

Designed for HS20 loading.

All reinforcing steel shall be Grade 60.

All concrete shall be Class "C" and shall have a minimum 28 day compressive strength of 3600 psi.

All reinforcing bars shall be adjusted to provide 1¼" clear cover.

These extended curb details have sufficient strength to allow for future retrofit of T6 rail. These details are not suitable for mounting other rail types. For new construction using T6 rail use T6-CM standard.

The extended curb is considered part of the Box Culvert for payment.

For vehicle safety the top of curb shall not extend more than 3" above finished grade.

(3) CONDITIONS FOR USE OF PIPE RUNNER

Nominal Culvert I.D.	Required for Single Pipe Culvert	Required for Multiple Pipe Culverts
24"	Not required	Skews over 30°
27" to 30"	Skews over 15°	Skews over 15°
33" to 60"	All skews	All skews

(1) STANDARD PIPE SIZES & MAX PIPE RUNNER LENGTHS

Pipe Size	Pipe O.D.	Pipe I.D.	Max Pipe Runner Length
2" STD	2.375"	2.067"	N/A
3" STD	3.500"	3.068"	10'- 0"
4" STD	4.500"	4.026"	19'- 8"
5" STD	5.563"	5.047"	34'- 2"

(1) Size of Pipe Runner shall be as shown in the tables. Cross Pipe shall be the same size as the Pipe Runner. Cross Pipe Stub Out and Bottom Anchor Pipe shall be the next smaller size pipe as shown in the STANDARD PIPE SIZES table.

(2) Recommended values of slope are 3:1, 4:1, & 6:1. All quantities, calculations, and dimensions shown herein are based on these recommended values. Slope of 3:1 or flatter is required for vehicle safety.

(3) For 48" culvert pipes, the skew shall not exceed 30°.
For 54" culvert pipes, the skew shall not exceed 15°.
For 60" culvert pipes, the skew shall not exceed 0°.
For all other culvert pipe sizes, the skew shall not exceed 45°.

GENERAL NOTES:

Pipe Runners are designed for a traversing load of 1,800 pounds at yield as recommended by Research Report 280-1, "Safety Treatment of Roadside Cross-Drainage Structures", Texas Transportation Institute, March 1981.

The Safety End Treatments shown herein are intended for use in those installations where out of control vehicles are likely to traverse the openings approximately perpendicular to the Pipe Runners.

Riprap and all necessary inverts shall be considered Concrete Riprap in accordance with Item 432, "Riprap".

Payment for riprap and toewall is included in the Price Bid for each Safety End Treatment.

Pipe Runners, Cross Pipes, and Anchor Pipes shall conform to the requirements of ASTM A53 (Type E or S, Grade B), ASTM A500 (Grade B), or API 5LX52.

Bolts and nuts shall conform to ASTM A307.

All steel components, except concrete reinforcing, shall be galvanized after fabrication. Galvanizing damaged during transport or construction shall be repaired in accordance with the specifications.

GENERAL NOTES:

Quantities shown herein are for Contractor's information only. Unless otherwise shown in the plans, payment will be made for each inlet of the type specified and for each extension. Each five foot curb opening of extension is considered "one extension" regardless of whether placed monolithically or precast. Extension length shall be in multiples of 5 feet.

Alternate design drawings bearing the seal of a registered professional engineer will be acceptable for precast construction of inlets.

When approved by the Engineer opening configurations of equivalent hydraulic design may be furnished.

Shop drawings will not be required.

The Contractor may with the approval of the Engineer furnish inlets of equivalent structural design.

In areas of conflict, reinforcing steel shall be bent or adjusted to clear as directed by the Engineer.

① Interior angle with 4 ~ 1/2" dia x 6" Bolts, Hex Nuts and Washers

GENERAL NOTES:

Quantities shown hereon are for Contractor's information only. Unless otherwise shown in the plans, payment ~~will be~~ made for each inlet of the Type specified.

Alternate design drawings bearing the seal of a registered professional engineer will be acceptable for precast construction of the inlets.

Shop drawings will ~~not be~~ required.

The Contractor may with the approval of the Engineer furnish inlets of equivalent structural design.

In areas of conflict between reinforcing steel, blockouts, pipes, anchor belts or other reinforcing steel, the reinforcement ~~shall be~~ bent or adjusted to clear as directed by the Engineer.

Structural Steel for grates shall conform to the requirements of ASTM Designation A-36 or AISI Designation M1010-M1020.

All reinforcing steel ~~shall be~~ #4 unless otherwise noted.

The pipe diameter, "D", ~~to be~~ used in determining horizontal dimensions of Type "H" Inlet, shall be the largest pipe entering or exiting the inlet which would control that particular wall dimension. For vertical dimension, use largest "D" or 1'-0" above highest pipe soffit as a minimum dimension.

All steel components except reinforcing, ~~shall be~~ galvanized after fabrication. Galvanizing damaged during transport or construction ~~shall be~~ repaired in accordance with the specifications.

GENERAL NOTES:

Quantities shown herein are for Contractor's information only. Unless otherwise shown in the plans, payment will be made for each inlet of the type specified and for each extension. Each five foot curb opening of extension is considered "one extension" regardless of whether placed monolithically or precast. Extension length shall be in multiples of 5 feet.

Engineer has the option of specifying cast-in-place top with ring and cover or removable precast top as specified elsewhere in plans.

Alternate design drawings bearing the seal of a registered professional engineer will be acceptable for precast construction of inlets.

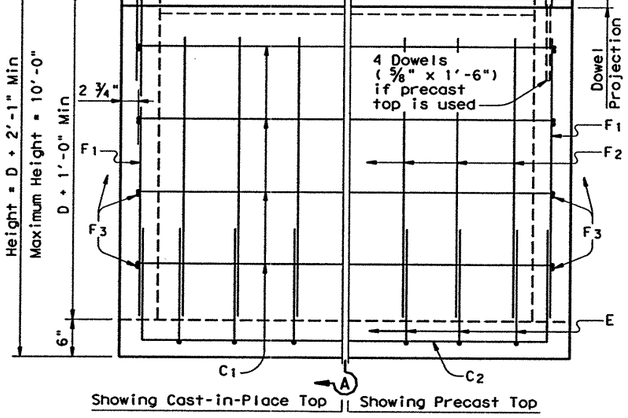
When approved by the Engineer opening configurations of equivalent hydraulic design may be furnished.

Shop drawings will not be required.

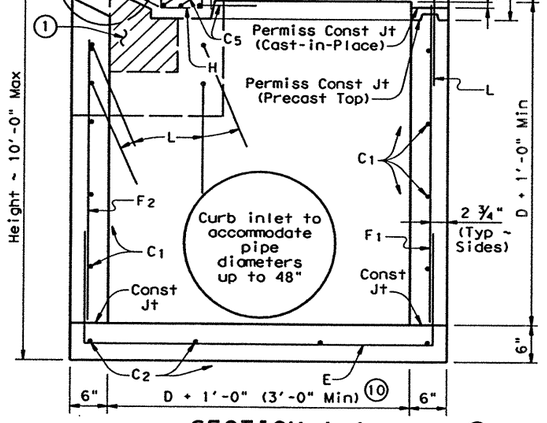
The Contractor may with the approval of the Engineer furnish inlets of equivalent structural design.

In areas of conflict between reinforcing steel, blockouts, pipes, anchor bolts or other reinforcing steel, the reinforcement shall be bent or adjusted to clear as directed by the Engineer.

Ring and cover shall conform to the requirements of AASHTO M306, "Standard Specification for Drainage Structure Castings". Materials shall conform to ASTM A48, Class 35B for gray iron castings or ASTM A536, Grade 65-45-12 for ductile iron castings. Aluminum alloy castings shall not be permitted.



ELEVATION



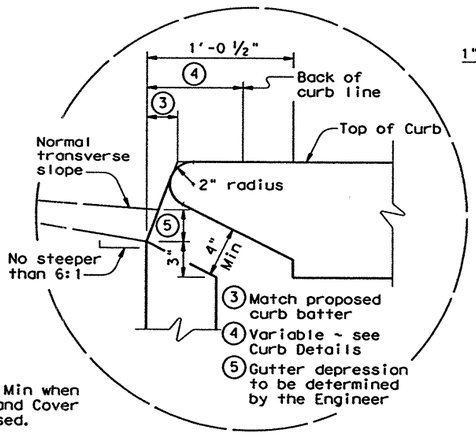
SECTION A-A

① Block out to accommodate extension if used and to place 4 Bars L

② If precast top is used, provide 4 ~ 5/8" dia x 1'-6" smooth bars in inlet walls for 1" dia holes

⑩ 3'-6" Min when Ring and Cover are used.

⑪ 1'-6" Min, 1'-9" Max Adjust placement of Ring and Cover as necessary to avoid conflict with Bars H.



DETAIL A

PIPE CONNECTION DETAIL

Connecting pipes should enter within 10° of normal to inlet wall. If necessary, pipe elbow or curved approach alignment should be used to stay within this limit.

GENERAL NOTES:

Unless otherwise shown in the plans, payment will be made for each manhole of the Type M.

Alternate design drawings bearing the seal of a registered professional engineer will be acceptable for precast construction of the manholes.

Shop drawings will not be required.

The Contractor may with the approval of the Engineer furnish manholes of equivalent structural design.

In areas of conflict between reinforcing steel, blockouts, pipes, anchor bolts or other reinforcing steel, the reinforcement shall be bent or adjusted to clear as directed by the Engineer.

The riser may be constructed of reinforced concrete as shown or of Reinforced Concrete Pipe, Class III, in accordance with ASTM Designation C-76. If pipe is used, joints shall conform to the Item "Reinforced Concrete Pipe Culverts". Precast Concrete Lift-Off Cover may be substituted for Ring and Cover.

The riser, either cast-in-place or concrete pipe, may be located in any corner.

All reinforcing steel shall be #4 unless otherwise noted.

Pipes may enter any or all walls. The maximum size of pipe that can be accommodated is 60". More than one pipe may enter a side, subject to the maximum box dimension shown. The clear distance between adjacent pipes should be 9" minimum.

Ring and cover shall conform to the requirements of AASHTO M306, "Standard Specification for Drainage Structure Castings". Materials shall conform to ASTM A48, Class 35B for gray iron castings or ASTM A536, Grade 65-45-12 for ductile iron castings. Aluminum alloy castings shall not be permitted.

Connecting pipes should enter within 10° of normal to inlet wall. If necessary, pipe elbow or curved approach alignment should be used to stay within this limit.

GENERAL NOTES:

Unless otherwise shown in the plans, payment ~~will be~~ made for each manhole of the Type M (Mod).

Exposed edges ~~shall be~~ chamfered ¾".

Alternate design drawings bearing the seal of a registered professional engineer ~~will be~~ acceptable for precast construction of the manholes.

Shop drawings will not be required.

The Contractor may with the approval of the Engineer furnish manholes of equivalent structural design.

In areas of conflict between reinforcing steel, blockouts, pipes, anchor bolts or other reinforcing steel, the reinforcement ~~shall be~~ bent or adjusted to clear as directed by the Engineer.

The riser may be constructed of reinforced concrete as shown or of Reinforced Concrete Pipe , Class III, in accordance with ASTM Designation C-76. If pipe is used, joints ~~shall~~ conform to the Item "Reinforced Concrete Pipe Culverts".

The riser, either cast-in-place or concrete pipe, ~~may be~~ located in any corner.

All reinforcing steel shall be #4 unless otherwise noted.

Pipes or culverts may enter any or all walls. The maximum size of pipe that can be accomodated is 60". More than one pipe may enter a side, subject to the maximum box dimension shown. The clear distance between adjacent pipes should be 9" minimum.

Actual number of culverts and boxes may differ as shown on storm sewer sheets.

Angle of connection of culverts and junction box varies as shown on storm sewer sheets.

Riser ~~may be~~ located on any corner.

The contractor may with the approval of the engineer furnish some junction boxes of equivalent structural design.

Ladder rungs ~~shall be~~ provided at 18" spacings at the locations directed by the engineer.

The minimum thickness of the wall and slabs (U & T Respectively) ~~shall be~~ 8".

GENERAL NOTES:

1. DESIGNED ACCORDING TO 1996 AASHTO STANDARD SPECIFICATION AND INTERIMS THERETO (HS25 LOADING).
2. BEAM END CONDITIONS:
   D: DENOTES A SLOTTED HOLE AT EXTERIOR BEAM END.
   BLANK: DENOTES NO HOLE AT BEAM END.
3. FOR BORING LOGS, SEE "BORING LOGS" SHEETS.
4. DRILLED SHAFTS ARE DESIGNED WITH POINT BEARING AND SKIN FRICTION.
5. EXISTING ARMOR JOINT PLATES TO REMAIN. EXTEND WITH NEW ARMOR PLATES WITH FIELD WELDED BUTT SPLICES AS DETAILED IN THE AJ STANDARD AT ~~PROPOSED~~ WIDENING. ~~PROPOSED~~ ARMOR PLATES TO MATCH EXISTING. NEW AJ PLATE LENGTH IS 34'-5" EACH SIDE.
6. CONTRACTOR ~~SHALL~~ VERIFY ALL DIMENSIONS AND ELEVATIONS IN THE FIELD.
7. INDENT ON THE BACK SIDE OF THE SSTR IS ~~TO BE~~ STAINED BLUE (FEDERAL STANDARD 595 B 35466).

	2 AT 6A. 2 AT 8A. 2 AT 10A. 2 AT 12A

GENERAL NOTES:

DESIGNED IN ACCORDANCE WITH CURRENT AASHTO STANDARD SPECIFICATIONS.

ALL CONCRETE ~~SHALL BE~~ CLASS H. ALL REINFORCING BARS ~~SHALL BE~~ GRADE 60.

WHEN SHOWN ON THIS SHEET, THE FABRICATOR HAS THE OPTION OF FURNISHING EITHER THE DESIGNED DEPRESSED STRAND BEAM OR AN APPROVED OPTIONAL DESIGN. ALL OPTIONAL DESIGN SUBMITTALS AND SHOP DRAWINGS ~~SHALL BE~~ SIGNED, SEALED AND DATED BY A REGISTERED PROFESSIONAL ENGINEER.

OPTIONAL DESIGNS FOR BEAMS 120 FEET OR LONGER ~~SHALL~~ HAVE A CALCULATED RESIDUAL CAMBER EQUAL TO OR GREATER THAN THAT OF THE DESIGNED BEAM.

PRESTRESS LOSSES FOR THE DESIGNED BEAMS HAVE BEEN CALCULATED FOR A RELATIVE HUMIDITY OF 65 PERCENT. OPTIONAL DESIGNS ~~SHALL~~ LIKEWISE CONFORM.

CERTAIN BEAMS WITH DEPRESSED STRANDS ARE SUBJECT TO CRACKING IN THE END OF THE BEAM. WHEN SUCH CRACKS OCCUR, ALL SUBSEQUENT BEAMS ~~OF~~ THE ~~SAME~~ TYPE AND STRAND PATTERN ~~SHALL~~ HAVE STRANDS DEBONDED IN THE FOLLOWING MANNER:

1. ALTERNATE ROWS OF DEPRESSED STRANDS ~~SHALL BE~~ DEBONDED FOR TWO FEET FROM EACH END OF THE BEAM.
2. ONE HALF OF THE STRAIGHT STRANDS, AS NEARLY AS POSSIBLE, ~~SHALL BE~~ DEBONDED FOR FOUR FEET FROM EACH END OF THE BEAM.
3. THE DEBONDING PATTERN ~~SHALL BE~~ SYMMETRICAL ABOUT THE VERTICAL AXIS OF THE BEAM FOR BOTH DEPRESSED AND STRAIGHT STRANDS.
4. STRANDS ~~SHALL BE~~ DEBONDED SO THAT THE CENTERS OF GRAVITY OF THE DEPRESSED STRANDS AND THE STRAIGHT STRANDS WILL REMAIN WITHIN ONE INCH OF THEIR ORIGINAL LOCATION.
5. STRANDS ~~SHALL BE~~ ENCASED IN PLASTIC TUBING ALONG ENTIRE DEBONDED LENGTH, AND ENDS OF TUBING ~~SHALL BE~~ SEALED WITH WATERPROOF TAPE. SPLIT PLASTIC TUBING ~~MAY BE~~ USED PROVIDED THE SEAM OF THE TUBING IS SUFFICIENTLY SEALED WITH WATERPROOF TAPE TO PROHIBIT GROUT INFILTRATION. WRAPPING OF STRANDS WITH TAPE TO PROVIDE DEBONDING WILL NOT BE PERMITTED.
6. REVISED SHOP DRAWINGS WILL NOT BE REQUIRED.

FOR DEPRESSED STRAND DESIGNED BEAMS, STRANDS ~~SHALL BE~~ LOCATED AS LOW AS POSSIBLE ON THE 2" GRID SYSTEM UNLESS A NON-STANDARD STRAND PATTERN IS INDICATED. FILL ROW "2", THEN ROW "4", THEN ROW "6", ETC., BEGINNING EACH ROW IN THE "A" POSITION AND WORKING OUTWARD UNTIL THE REQUIRED NUMBER OF STRANDS IS REACHED. ALL STRANDS IN THE "A" POSITION ~~SHALL BE~~ DEPRESSED, MAINTAINING THE 2" SPACING SO THAT, AT THE BEAM ENDS, THE UPPER TWO STRANDS ARE IN THE POSITION SHOWN IN THE TABLE.

STRANDS FOR THE DESIGNED BEAM ~~SHALL BE~~ ½" 270 ksi LOW RELAXATION STRANDS PRETENSIONED TO 31.0 k EACH.

NON-STANDARD STRAND PATTERNS

PATTERN	STRAND ARRANGEMENT AT ℄ OF BEAM

GENERAL NOTES:

DESIGNED IN ACCORDANCE WITH CURRENT AASHTO STANDARD SPECIFICATIONS.

ALL CONCRETE SHALL BE CLASS H. ALL REINFORCING BARS SHALL BE GRADE 60.

WHEN SHOWN ON THIS SHEET, THE FABRICATOR HAS THE OPTION OF FURNISHING EITHER THE DESIGNED DEPRESSED STRAND BEAM OR AN APPROVED OPTIONAL DESIGN. ALL OPTIONAL DESIGN SUBMITTALS AND SHOP DRAWINGS SHALL BE SIGNED, SEALED AND DATED BY A REGISTERED PROFESSIONAL ENGINEER.

OPTIONAL DESIGNS FOR BEAMS 120 FEET OR LONGER SHALL HAVE A CALCULATED RESIDUAL CAMBER EQUAL TO OR GREATER THAN THAT OF THE DESIGNED BEAM.

PRESTRESS LOSSES FOR THE DESIGNED BEAMS HAVE BEEN CALCULATED FOR A RELATIVE HUMIDITY OF 65 PERCENT. OPTIONAL DESIGNS SHALL LIKEWISE CONFORM.

CERTAIN BEAMS WITH DEPRESSED STRANDS ARE SUBJECT TO CRACKING IN THE END OF THE BEAM. WHEN SUCH CRACKS OCCUR, ALL SUBSEQUENT BEAMS OF THE SAME TYPE AND STRAND PATTERN SHALL HAVE STRANDS DEBONDED IN THE FOLLOWING MANNER:

1. ALTERNATE ROWS OF DEPRESSED STRANDS SHALL BE DEBONDED FOR TWO FEET FROM EACH END OF THE BEAM.
2. ONE HALF OF THE STRAIGHT STRANDS, AS NEARLY AS POSSIBLE, SHALL BE DEBONDED FOR FOUR FEET FROM EACH END OF THE BEAM.
3. THE DEBONDING PATTERN SHALL BE SYMMETRICAL ABOUT THE VERTICAL AXIS OF THE BEAM FOR BOTH DEPRESSED AND STRAIGHT STRANDS.
4. STRANDS SHALL BE DEBONDED SO THAT THE CENTERS OF GRAVITY OF THE DEPRESSED STRANDS AND THE STRAIGHT STRANDS WILL REMAIN WITHIN ONE INCH OF THEIR ORIGINAL LOCATION.
5. STRANDS SHALL BE ENCASED IN PLASTIC TUBING ALONG ENTIRE DEBONDED LENGTH, AND ENDS OF TUBING SHALL BE SEALED WITH WATERPROOF TAPE. SPLIT PLASTIC TUBING MAY BE USED PROVIDED THE SEAM OF THE TUBING IS SUFFICIENTLY SEALED WITH WATERPROOF TAPE TO PROHIBIT GROUT INFILTRATION. WRAPPING OF STRANDS WITH TAPE TO PROVIDE DEBONDING WILL NOT BE PERMITTED.
6. REVISED SHOP DRAWINGS WILL NOT BE REQUIRED.

FOR DEPRESSED STRAND DESIGNED BEAMS, STRANDS SHALL BE LOCATED AS LOW AS POSSIBLE ON THE 2" GRID SYSTEM UNLESS A NON-STANDARD STRAND PATTERN IS INDICATED. FILL ROW "2", THEN ROW "4", THEN ROW "6", ETC., BEGINNING EACH ROW IN THE "A" POSITION AND WORKING OUTWARD UNTIL THE REQUIRED NUMBER OF STRANDS IS REACHED. ALL STRANDS IN THE "A" POSITION SHALL BE DEPRESSED, MAINTAINING THE 2" SPACING SO THAT, AT THE BEAM ENDS, THE UPPER TWO STRANDS ARE IN THE POSITION SHOWN IN THE TABLE.

STRANDS FOR THE DESIGNED BEAM SHALL BE ½" 270 ksi LOW RELAXATION STRANDS PRETENSIONED TO 31.0 k EACH.
