

Snowplowable Pavement Markers

NOTE: Refresh the page to view the most current list.

The following snowplowable pavement markers have been tested and are pre-approved for use when DMS-4210, “Snowplowable Pavement Markers,” is referenced. This Specification describes the procedure for approval.

Because of the high cost and low volume used, these markers may require sampling and testing before use. Tex-729-I, “Sampling Traffic Markers,” describes the sampling procedure.

The Department reserves the right to conduct random sampling of pre-approved, certified materials for testing and to perform random audits of test reports. Department representatives may sample material from the manufacturing plant, the project site, and the warehouse. The Materials and Pavements Section of the Construction Division reserves the right to test samples to verify compliance with DMS-4210.

For more information, contact CST/M&P’s Coatings and Traffic Materials Branch at **(512) 506-5870**.
