

Determining Construction General Permit (CGP) Authorization Requirements Based on the Amount of Soil Disturbed

¹ If the site is within a Common Plan of Development with a disturbed area of one acre to less than 5 acres, include all acreage of the Common Plan of Development and follow the requirements for sites ≥ 1 and <5 acres.

² If the site is within a Common Plan of Development with a disturbed area of 5 acres or more, include all acreage of the Common Plan of Development and follow the requirements for sites ≥ 5 acres.

³ The addition of a project specific location (PSL) within 1 mile of any project limits could increase the total area and disturbed area for the project above the threshold for <1 acre and ≥ 1 acre and <5 acres sites triggering additional SWP3 and CGP requirements.
