

# US 183 from SH 71 to SH 130

Travis County

August 2024

## WHY IMPROVEMENTS ARE NEEDED

The Texas Department of Transportation is conducting a study to explore potential safety and mobility improvements to US 183 from SH 71 to SH 130. The existing 4-lane highway is divided from SH 71 to FM 812, and undivided from FM 812 to SH 130. Multiple neighborhoods, businesses and other structures are located along or in close proximity to the corridor, and the Austin-Bergstrom International Airport is adjacent to the highway. The population of the Austin area has grown significantly in recent years. This has resulted in the need for transportation improvements. TxDOT will be analyzing concepts to improve mobility, enhance safety and facilitate roadway connectivity on US 183 from SH 71 to SH 130.

## PROJECT OVERVIEW

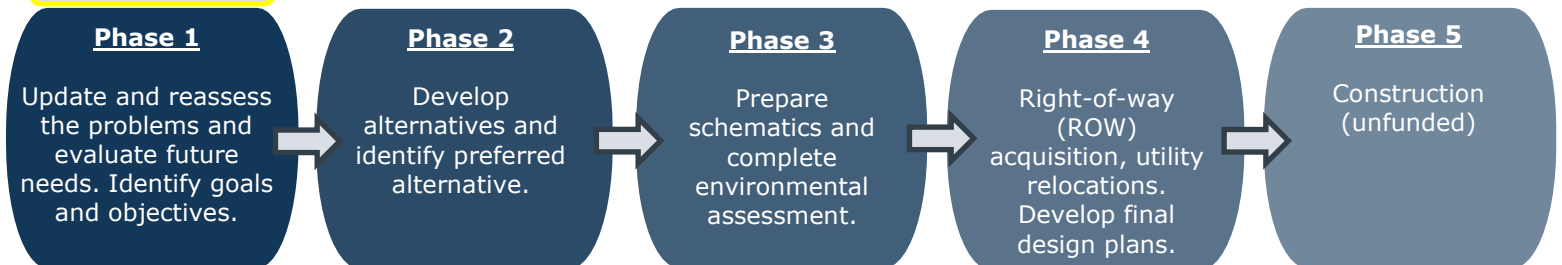

As part of the study, goals and objectives will be established and potential improvements will be identified and evaluated to enhance safety, mobility and roadway connectivity within the project area. The study will include the environmental studies and documentation necessary to comply with the National Environmental Policy Act of 1969. The study will conclude with the identification of a recommended alternative.

TxDOT will actively engage the surrounding communities throughout the study process, and there will be several opportunities for the public to provide input. By encouraging participation and community-wide dialogue, transportation improvements that minimize community impacts and reflect community values can be identified.

*The proposed project would require new right of way.*
