

Lampasas Relief Route Feasibility Study

The Texas Department of Transportation, in coordination with the City of Lampasas, is conducting a feasibility study to explore a potential relief route around Lampasas. The relief route would give people the option to travel around the city to improve safety and mobility.

Study Purpose and Need

- The purpose of the study is to:
 - Find a transportation solution that improves safety and mobility for the community.
 - Identify a feasible alignment for a relief route that is supported by the local community.
- A Lampasas Relief Route Feasibility Study was supported by the City of Lampasas in a resolution passed by the City Council on Oct. 14, 2019.
- The intersection of Key Ave with US 190 and US 183 had approximately 70 crashes in the last five years, the highest rate in the city.
- By 2040, traffic is anticipated to grow about 40% for most state highway segments leading into and out of Lampasas.

Study Process

As part of the overall planning process, a feasibility study will help identify the purpose and need of a proposed relief route project to determine if it is environmentally and/or financially feasible. As part of the study, goals and objectives will be established and route options will be identified and evaluated. The study will conclude with the identification of a locally preferred option. TxDOT could consider developing a final alignment as part of a future engineering and environmental study process.

Schedule

The Lampasas Relief Route Feasibility study began in May 2022 and is anticipated to be complete in the Fall 2023. If the study concludes that a relief route is feasible, additional work will be needed on preliminary design, right-of-way needs, environmental study, and funding prior to a final relief route decision.

Your Input is Requested

Stakeholder input is welcome and will be carefully considered throughout the study. Please visit the Lampasas Relief Route project page at www.txdot.gov and search: Lampasas Relief Route.
