Project Timeline and Next Steps

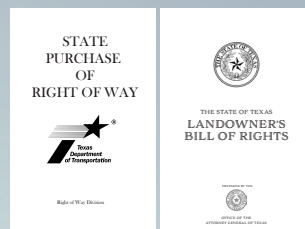

Environmental Analysis

- After the selection of an alternative, the project team will identify and evaluate potential environmental impacts that could occur as a result of constructing the selected alternative.
- Areas that would be reviewed include biological resources, community impacts, environmental justice, water resources, hazardous materials, archaeological resources, historic resources, air quality and traffic noise.
- Once completed, technical reports documenting the analysis and conclusions of these studies will be summarized in an environmental document that will be made available.
