Introducing the TxDOT Houston District's - the Cloud-Based Driveway Access Permit (DAP) System. Developed with a focus on efficiency, expediency, and enhanced customer service, this tool is set to transform the way private property owners and businesses interact with state highways in the Houston District.

Recognizing the significance of providing swift access to and from state highways, the TxDOT Houston District has been diligently working on this new solution. The Cloud-Based DAP System is designed to streamline the entire process of obtaining access permits for private properties.

The key features of the Cloud-Based DAP System are as follows:

1. Expedited Processing: User now can view TR number right after submitting the application.
2. Real-Time Status Updates: With the Cloud-Based DAP System, users can now view the status of their applications in real-time, with access to up-to-date information on the progress of their requests.
3. Enhanced Communication: The system includes an integrated communication feature that enables seamless interaction between users and the TxDOT Houston District team.
4. User-Friendly Interface: The tool's user-friendly interface ensures that property owners, irrespective of their technical expertise, can easily navigate the system. The intuitive design guides users through the application process step-by-step, making it accessible to a broad audience.
5. Secure Cloud Infrastructure: Security is a top priority, and the Cloud-Based DAP System ensures the protection of sensitive data through robust cloud infrastructure.
