Economic Importance of Staging Facilities in Texas

Staging facilities support a wide variety of freight producing and consuming industries in Texas. These estimates are very conservative as they do not capture staging activity reported in wholesale, manufacturing, or retail industry groups. Annually, freight-handling facilities support:

- **173,000** jobs
- **8.8 billion** in personal income
- **13 billion** in Gross State Product
- **2.4 billion** in tax revenues

Freight Moving through Inland Ports

Staging facilities are an essential part of supply chains for most industries. The types and amounts of freight moving through them are dictated by the modes used to serve them and are best understood through analyses of modal transportation patterns. One important new trend has been the emergence of Inland Ports featuring clustered warehouse/distribution, multiple modes, and efficient connections to international trade gateways. Examples include Alliance, Texas (27,000 acres with 50 million square feet of industrial space and 525 companies), Port San Antonio, and the Port of Dallas.
